Can You Afford-

to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish. Paste, Cake or Liquid. If you are doing business for a profit it will pay you to handle our whole line.

WHY IS C. E. JENNINGS' NEW AUGER BIT No. 1%

THE BEST BIT FOR WOOD BORING IN THE WORLD?

Because: There are good bits made for hard wood. The L'Hommedieu Shtp Bit is an excellent tool for this purpose, but it is not designed for fine cabinet work or soft wood. There are good Bits for Soft Wood, but fail when used in hard wood. We have combined two principles in one, and think we have solved the problem of putting a bit on the market that is suitable for all around use. Prices furnished the Trade on application.

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

GREAT SANITARY STOVES. ALUMINUM OIL HEATERS.*Read what WILLARD H. MORSE, M.D., F. B. S. Sc., has to say about them:*

— OVER —
200,000 of these **HEATERS**
NOW IN USE.

And nothing but words of praise
in testimony of their excellence.

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates; durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

HARDWARE

A dish fit for the President: Corn beef hash and apple sauce. "Chops and tomato sauce," so President Sargent thinks, is not in it with the above combination.

Many women are still engaged in iron mines and in iron and steel works in Germany, the total number so employed, according to the most recent returns, being 3739. Of this number, 1283 work in iron mines, 852 at blast-furnaces, 537 at foundries, 623 at forges, and 444 at steel works.

There's a paint shop in the Ninth Ward, New York, run by a man named "Sunshine," who, although he is extremely popular in his district, doesn't dare go into politics because he fears he couldn't run as a "dark horse."

The Curley Cutlery Co., Hotchkissville, Conn., with New York office at No. 5 Warren Street, has been recently incorporated to manufacture the finer grades of Pocket Cutlery and similar specialties in high-grade goods. John H. Hilton is manager and James Russell Curley, secretary and treasurer.

The Syracuse woman to whom "love me love my dog" was such a predominant creed that she wanted the canine killed and buried with her, wasn't dogmatic in her views; she simply wanted to give her pet a box seat at the obsequies.

Henry R. Towne, president of the Yale & Towne Mfg. Co., returned from his extended vacation trip abroad on the *Augusta Victoria*, arriving here on Dewey Day, September 29th. He gives every evidence of having been greatly benefited by the change of scene and ensuing conditions of rest and recuperation, having enjoyed his trip immensely.

The tandem bicycle as a promoter of marriage seems to have been retired. Perhaps it was not "too near" enough "and yet too far." The tubular suspension bridge may furnish diamonds, but not of the engagement ring order of excellence.

The J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., are largely increasing the fine exhibit of Cabinets in their display rooms, and they expect to have the same all newly fitted up in time for the contemplated Fall Festival, from October 7th to October 12th. They state they would be greatly pleased if all Hardware Merchants visiting Chicago would just give them a call and see their exhibition.

The man with a grievance is the *bete noir* of every Hardware establishment of to-day. Too many good concerns submit to rank injustice rather than insist on what they feel is right, believing that "time at last makes all things even," which it generally does.

Under date of September, 1899, we are in receipt of the first issue, Vol. 1, No. 1, of the new publication "Export Implement Age," published by the Nolan Publishing Co., Drexel Building, Philadelphia, Pa. Its appearance is first-class, with contents of an interesting character, and paper and presswork excellent. It also possesses a number of unique features, which cannot do otherwise than recommend it to a large body of advertisers, many of whose announcements are noticeable in its advertising columns.

One of the new departures is the printing on colored inserts of a large number of write-up paragraphs having reference to the products of their patrons. These are printed in Spanish, French and German, four pages being devoted to each. This, we should think, will prove a taking feature.

The wad of the sportsman must need be a good fat one at this season of the year, if he wants to enjoy the fun to the full. But as gun wads are essential to a proper enjoyment of the occasion, it follows that a gunner's wad would be a proper thing to flash in the face of the big game that tempts our love of sport.

Active preparations are being made for the holding of the Fifth Annual Convention of the National Hardware Association in the city of Pittsburg, November 15th, 16th and 17th. The Association headquarters will be at the Monongahela House. Arrangements have been made for the accommodation of delegates and visitors at the Hotel Schenley, Hotels Henry and Duquesne. The manufacturers of Pittsburg have appointed a committee to look after the comfort and entertainment of the delegates during the evenings of the Convention. During the three days mentioned the entire time will be devoted to the business of the Association. The Banquet will be held on the last evening.

"This," remarked the Hardware storekeeper as he proudly contemplated his new brass sign, "is what I call polished English."

"Yes," said a bystander, "and the proprietor's most noted quality is kept in the background."

One of the club-topsail Hardwaremen who started to see yacht races under the most favorable yachting auspices, was compelled to confess that his self-importance was sadly punctured by the uncertain foothold he had while "on deck," which administered a dose of knock-out drops that loosened his hold on the world and all that he contained.

When the former Madame Langtry launches her black and tan memoirs on the expectant public, it is suggested that the illustrations to the "*demi damme*" disclosures be limited to half-tones retouched.

The Trade Paper Advertising Agency, No. 150 Nassau Street, New York, added a valuable reinforcement to their staff when they secured the services of Mr. Sam A. Elkington, he having been associated as advertising manager and ad. writer with leading trade journals of the country for the past ten years. Few men have proved more successful as an advertising expert, or shown more familiarity with the technical journals than Mr. Elkington. Advertisers desirous of using trade papers will undoubtedly find his services of great assistance and value to them. The Trade Paper Advertising Agency have shown excellent policy by securing the best talent available, and thus keep their agency one of the most prominent in the country, and of great value to their clients who patronize the advertising pages of trade papers. It is the intention of this agency to shortly open a branch office in Philadelphia for the convenience of its clients in that district, placing the office in charge of Mr. Elkington.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The Fall trade may be regarded as running now on a full tide of activity, with the prospect of a healthy continuance. Fears are being entertained by many dealers, whether the high prices now demanded by manufacturers on such lines as show more cost in material than in labor, can be sustained beyond the present season. As long as the demand keeps up no reaction in prices need be apprehended but so many radical changes of 50 to 100 per cent. increase have been made on staples, there is a natural desire to stand from under in case of any weakening, and a few important recessions at this time during the present season would create a holdup on orders that would result badly for a continuance of the present confidence. The profit line has been of such a generous fullness among the retail trade generally, that many retail dealers who have not largely replenished their stocks have made advanced retail prices with reluctance, and have been very conservative, hoping for a halt in the consecutive number of these upward movements. With the markets still showing increasing strength more changes and higher prices become essential to a satisfactory business which will prove more of a feature this Fall than in the Spring.

The payment of higher wages in the labor department of some of our large factories, has not exerted so much of an influence on our general industrial development as to affect current quotations. The changes so important find justification only in the increased cost of raw material, and a demand in excess of any supply, making larger profits a temptation. When labor generally shall decide on sharing in the rewards of industrial activity, and insists on increasing wages or shorter hours at the same pay—the least of their demands,—the influence thus exerted will counterbalance on many lines of goods, any lower prices that may be obtained on raw material, when the present rabid demand shall cease to sustain the markets and shorten the supply.

The steadily advancing markets on iron and steel and their products not necessarily passing through the hands of skilled workmen on finer grades of goods, have been held well in hand throughout the year, making a new basis of cost essential at every step by a gradual advance in price that prevented any slackening in the general demand. This method while scarcely premeditated has been a desirable one to adopt, allowing as it did a price in contemplation always higher

than the one at which purchases were and could be made. Buyers thus were far from timid and even the most conservative purchasers kept their stocks in normal condition with warehouse reserves, which for many months before had been made compulsory on the manufacturer to provide for a demand that was probable only.

It would be the part of wisdom for the merchant to recoup some of the losses of the past by securing as much of the profit of the present as is consistent with the ethics of an honorable business. We know not what the future may bring forth, and those of us who have passed through the uncertain periods of the early seventies, and the radical changes that commenced the succeeding decade, will remember that when a change from booming conditions does arrive, it's a pretty difficult business to avoid losses that are too quickly developed when it's a question of everyone for himself and the care of the hindmost is left to the gentleman in black.

Unauthorized Return of Goods.

Among the numerous discomforts and disorganizing influences that affect the relation of the jobber or other distributor in their commercial connection with the manufacturer, that of returning goods in an unauthorized manner, is among the worst.

When a purchase has been made, an order given and goods shipped on account thereof, one would suppose the incident could be considered closed, and no further anxiety associated with the transaction; but such is rarely the case. A discovery of a larger stock than is desirable under some circumstances; or a finding of something more modern and popular than the article previously ordered; the finding out at a remote date, that their ordering man has made a mistake in the size or description of the goods received from the manufacturer; these, and many similar reasons are given why goods are shipped back, with only a curt notice acknowledging the act, and relying upon previous friendly relations to justify the belief that the manufacturer will swallow his resentment and put the goods back in stock, and giving the sender credit on a possibly long-standing account.

Of course, any such liberty taken without permission being asked, is regarded as an impertinence that has nothing in commercial ethics to justify it; and yet it is a custom that has long been "more honored in the breach than in the observance thereof," and has been used during the dull seasons ending with the Fall of 1898, to such an unlimited extent that at the present time when indulged in, it comes under the head of a vested right, and great surprise is manifested when exception is taken to it.

Sometimes articles are so cut in price by close competition in a town, that a conservative dealer declines to be a party to such a state of affairs and returns his share of the competing articles, desiring something that will afford more show for profit. Frequently an unfamiliarity with the working methods of some mechanical appliance or indisposition to learn, will throw the tool or article ordered back on the equally untaught jobber's hands, and the maker must bear the brunt of their density by later adding it to his stock, probably large enough already in this especial line.

Sometimes the retail dealer, who should be familiar with the methods for economical use of the improved tools on sale by him, fails to impress his customer suffi-

ciently through lack of individual knowledge, and the latest and best goods become slow of sale; stocks are congested, and all dealers hate the sight of goods that fail to move. What will be done with them? "Oh! send them back to the manufacturer and he will send them to someone else." But this condition of affairs, when properly resented by the victim imposed upon, results in an acrimonious correspondence through which a customer is lost immediately after the cessation of aggressive hostilities.

Now why should not the present time be a good one to inaugurate, among the other contemplated reforms, the all-around insistence that a sale is a sale, and the good judgment that instigated it should never be questioned or weakened by an unauthorized return of any of the goods purchased. The manufacturer should not be made the victim of a misplaced judgment on the part of a jobber, nor should the jobber be relied upon to make good the blunders perpetrated by an incompetent retail buyer, who overestimates the selling qualities in his locality, of a new and popular specialty. If some steadfastness of purpose is shown in this particular it would eventually be extended to the consumer, who, through the lax methods of competing retailers, frequently takes advantage of the retailer's credulity, and gives him a "ghost story" that results in one of these misfit returns for which a love for fair dealing cannot be held accountable.

Drummers and Trusts.

It is announced that certain "drummers," whose services have been dispensed with by the formation of "Trusts," have undertaken the formation of a National Anti-Trust League, with headquarters at Washington, and invite the co-operation of hotel men and others interested (possibly the Democratic National Committee, as we notice Mr. O. H. P. Belmont is one of the executive committee of the League).

This is a perfectly natural manifestation of human nature on the part of the drummers who are thrown out of a job by the organization of industry, but in what comparative degree do they differ from the stage driver who was displaced by the locomotive, or the laborer who was thrown out of his job by the invention of a labor-saving machine? The introduction of every such machine has met with a similar protest, yet they have been introduced notwithstanding, and have resulted in a wider employment of labor, an increase of travel and commerce, lower prices to consumers and to the advantage of the public as a whole. When an average of four drummers in the same line meet in every country store every day in the year its bad for the storekeeper, for their expenses have to get on the goods somewhere. It is bad for the consumer for the same reason. It may be good for the hotel man and furnish some pleasant poker parties, but can an economic system which furnishes a drummer for every consumer, and a milk wagon for every house on the block, last? Certain it is that the cost of distribution has grown until in many industries retrenchment has become absolutely necessary, and this is one of the main reasons for the formation of trusts. In the evolution of industries thus far every intelligent and industrious man thrown out of a job in one place has found another, where his value finds a new level; and so it will be with every worthy drummer.

Death of James De La Montanya.

James de la Montanya died on September 18th, at his residence, No. 1524 Taylor Street, San Francisco, from general debility incident to his advanced age and a complication of kidney and heart troubles. Deceased was one of the most prominent merchants of San Francisco, a dealer in stoves, metals and Hardware at Nos. 606-608 Battery Street and Nos. 214-222 Jackson Street, where he had been located for almost fifty years.

Mr. de la Montanya was born in Haverstraw, N. Y., July 12, 1819. His father, Captain John de la Montanya, was also a native of New York and served in the War of 1812. The family is of Huguenot stock. James de la Montanya was in business at Peekskill, N. Y., and later in New York city, where he was established when the discovery of gold in California was reported.

Although a young man, he had amassed considerable wealth, so he purchased a ship, loaded it with his stock of Hardware and sailed for San Francisco, where he arrived in 1850. He at once went into business, sinking his ship in front of his present business site on Jackson Street, and using it as a warehouse. He was a prominent factor in the stirring events that followed.

During the Civil war he was a staunch Union man, and subscribed \$250 a month for the care of sick and wounded Federal soldiers. He was married in San Francisco in 1860 to Miss Sarah J. Horn, who survives him. He also leaves two children, Jennie and James. He was an Odd Fellow of long standing and a member of Grace Episcopal Church.

Mr. de la Montanya attended to his business duties until a few days before his death, when he complained of not feeling well, and upon the advice of his son James, went home and to bed. His condition became steadily worse, but not until the day of his death was all hope for recovery abandoned. He is survived by a brother in Oakland, another in San Rafael and a sister in Haverstraw, N. Y.

A School of Electricity.

The Educational Department of the Harlem Branch Young Men's Christian Association, at No. 5 West 125th Street, has added to its curriculum a course in Electricity. The aim is to make this course of practical value to all men who are interested in electrical work.

The school will be in charge of Mr. William J. Clarke, who has seen active service in nearly every branch of electrical work.

The course will consist of forty-eight lectures, commencing Oct. 17th Mr. Clarke will commence by thoroughly grounding the class in the fundamental rules and principles of electrical engineering, and during the course will cover fully the various branches of telegraphy, telephony, police and fire-alarm telegraph, arc lighting, alternate current apparatus, the distribution of electric power, the electric street railway, the electric automobile, the "X" rays and wireless telegraphy.

Each lecture will be illustrated by diagrams thrown upon the screen by means of a powerful stereopticon, so that each member of the class may readily follow the explanations of the teacher, and in addition to this a large amount of apparatus will be used in illustrating the work.

The cost of the course is placed at the nominal fee of \$10, including limited membership in the Branch for one year, with its valuable privileges. Full particulars and application blanks may be secured by addressing the secretary.

Dr. Richard Garnet, keeper of the printed books, British Museum, says there are about 2,000,000 books in the museum.—*Exchange*.

Three hundred and sixty-eight vessels were in collision last year.—*Exchange*.

Yale & Towne Mfg. Co.'s Catalogue.

The Yale & Towne Mfg. Co., Nos. 9-13 Murray Street, New York, have just published the most important catalogue with which their name has been identified. It is a handsomely printed and bound volume of more than 900 pages, $9\frac{1}{2} \times 12\frac{3}{4}$ inches in size, on excellent paper, superior presswork and superbly illustrated. In fact, the general arrangement and careful preparation of the same is surpassed by no catalogue of strictly builders' Hardware within the knowledge of the trade. It reflects great credit on its compilers, and but few except those who have made a study of thorough catalogue work can understand what a laborious undertaking the preparation of such a complete catalogue is, and how greatly it is to be appreciated, that success should be attained with few if any errors, when the field to be covered is so extensive. The book is bound in a very attractive cloth, with leather back and corners, and is evidently intended to be long serviceable, even though constantly handled. It is No. 17 in their catalogue series.

Within the fifty pages that follow the General Index is given a Numerical Index of Locks and Hardware in consecutive order, then a comparison of the old and new numbers, many of which have been changed, followed again by two pages of suggestions as to the number system used by the company. Then next in order are three pages of metals and finishes, giving descriptions of all their various styles, and following immediately after this will be found six pages that contain a glossary of technical terms, relating exclusively to locks and Hardware, prepared by Henry R. Towne, President of the company, and which will be found very instructive reading by those to whom the catalogue will prove valuable. The remaining twenty-three preliminary pages give a succinct history of the company, various details connected with the construction of the "Yale" lock, interesting references to "Vulcan" and "Branford" locks, to the use and extent of artistic expression in metal work, a number of hints for taking off Hardware from architects' specifications, beside a quantity of general information as well, covering master-key locks and the various hands and bevels of doors and locks, all of which are fully illustrated, in order to make the information given more readily understood.

The claim is made that the pages of this catalogue cover the largest and most extensive line of Ornamental Hardware, and locks and builders' Hardware in the world, and this claim would seem to be justified by the great amount in extent and grades of quality of such material as is compassed between the two covers of this important volume. Previous catalogues from this company have been made with half and third-size cuts, which permit the more complete tabulating of matter, so that intelligently condensed information is given of the extent of product in the same pattern of goods, either on single pages or on opposite pages. This method of illustrating has been followed in the careful preparation of this catalogue, so that when special ornamental designs are given, on the opposite pages the various goods manufactured in this design are tabulated, and shown in an easy, condensed form that will be readily appreciated by the trades for whose use the volume is prepared.

No effort is made to show every shape or pattern manufactured by this company in any special design, as that would require a volume double the size of this, but while the designs are abundantly illustrated in many ways, tabulated information relating to all the articles manufactured under the specified design is given in a thoroughly comprehensible manner, including as it does all the various qualities of goods that the trade recognize by such names as the "Yale," the "Yale-Standard," the "Vulcan" and "Branford," which, while forming a harmonious assortment, are still constructed on individual lines of excellence that make them present the original features peculiar to each, from the finest to the lower priced.

It is evidently the design of the compiler to present each group of locks in consecutive order according to price, beginning with the cheapest of the line.

The Ornamental Hardware covers in all about 250 different styles of ornamentation, which naturally embrace goods of varying quality, manufactured from every metal used in the business—from cast iron to such designs as are shown in real bronze, or even in silver or gold. In compiling the catalogue, an effort has been made to show every variety of lock and trim called for by the architect, dealer or builder, while care has been taken that all trivial and needless descriptions are eliminated from the page, in order to make it more easily understood by those consulting it.

In this catalogue is evidently shown the survival of the fittest in the large number of patterns controlled by this company. It is understood that these have all been carefully gone over, and a number have been thrown out as obsolete that were popular in their day, so that the present volume shows everything of commendable importance which they are now manufacturing or desire to continue to distribute to the trade. This includes a large number of new articles which have been added to the assortment in order to make this extensive line even more complete, covering the varieties in the way of special articles that are requested to-day to make an architect satisfied that every care is given to the general design and harmony of the work he may be employed in.

The designs shown are of the most artistic character imaginable, having evidently been prepared by trained artists and designers, thoroughly conversant with the rigid requirements of the modern school of architects, who are satisfied with nothing but the superior designs demanded by their clients. Even the cheaper goods shown throughout are far in advance of such designs as were popular and prominent only a decade ago, the older styles having been compelled to make way for something more artistic in its nature. In addition to builders' locks and the necessary trim, there is shown as well in the pages of this catalogue a complete assortment of cabinet and trunk locks, padlocks, prison locks, and many styles of locks that are frequently called for in special requisitions.

The ten pages concluding the catalogue are given over to a description of the Chain Blocks and Hoists manufactured under the numerous patents controlled by the Yale & Towne Co., in which full description is given, accompanied by list prices on separate pages, of the Yale Differential Blocks, the Yale Duplex Blocks and the Triplex types of the same. These important goods are fully illustrated, readily understood, and easy reference is made to their comparative cost by the list prices being given on each page.

Two Cements for Iron Work.

A contemporary recommends to take three parts of iron filings, one part of sulphur and one part of sal ammoniac; work up the whole to the consistency of stiff paste with the least possible quantity of water, and apply it as mortar in the beds or joints to be cemented. Another receipt which will set as hard and as solid as the iron itself, is made as follows: Take fifty pounds of cast iron borings, coarser or finer as for larger or smaller joints, four pounds of sulphur, a quarter of a pound of sal ammoniac, cold water enough to cover the whole mass to be stirred well in. Let this remain a day or two, with occasional stirring before using. When ready, caulk closely into joints. This will be found the best where caulking a joint has to be done; but the first is better where cement is laid in with the work.—*Tradesman*.

The Sulu Islanders dress with great taste. The women are fond of bright colors and love to adorn themselves with jewelry.—*Exchange*.

HARDWARE TOPICS BY THE WAY.

Resident representation abroad is what we need rather than government commercial agents.

A Western manufacturer claims for his rifles and guns a perfect Dewey fire. That ought to convince.

I just read the item, Manila rope is on the rise. We wouldn't mourn were Aguinaldo at the lower end of it.

We sell stove polishes, and send a man around to do the work free of charge. This dealer is very busy just now.

Anticipate rather than await developments. Were Wall Street to await developments, its usefulness would be at an end.

What will the bull and boer campaign in Africa bring us? What bring bull and bear contests generally? Success and disaster intermingled!

They are now talking of aluminum horseshoes. I suggested the idea to a Western dealer, and he at once set forth to secure a patentable model. Discussion is invited upon this proposition.

The Ohio Pure Food Commission is looking up the linseed oil abuses. It is said a large percentage of the stock carried by dealers and sold as pure, is simply a compound of molasses and other added ingredients.

Political propositions do not confound the man of business. He's too busy making the best of McKinley's promise of prosperity. The rational citizen will gauge his vote according to realization. So McKinley need not fear.

A Western merchant placed a grindstone in front of his store for the gratuitous use of the public. The store bears this legend: "While you keep your nose to our grindstone, don't keep your eyes off the cutlery display in our window."

The modern apartment house, vulgarly family garrison, has come to multiply. And it's a prime field for builders' Hardware. Being modern, their construction requires all the modern creations of Hardware manufacture, and thus improvement gradually approaches perfection.

The German traveling man succeeds abroad because he is a linguist. Here's a ripe problem for our Travelers' Association. They might well fill out their scope by inaugurating departments for commercial languages. English goes far and wide, but the others fill out the corners.

Automobile delivery express is what the American merchant most needs to-day. The cigarette-sodden, dime-novel, comatose messenger, and "old plug" urban express service, does not harmonize with the rapid transit ideas of the average modern. It's now everywhere, the quick or the dead.

The return of the prodigal, we might characterize the Dewey home-coming. The American nation and Dewey enthusiasm mark a new epoch in our life. We have come to know the right man when we see him. In Dewey we have the proper model of ambition, self-respect and democratic manhood.

A wholesale firm out West proposes to build a warehouse which will do away with loading and unloading in the streets, and also insure secrecy of its business. The teams will simply be run into a monster freight elevator which

reaches all floors. The labor and time saved by this improvement is certainly not a small matter.

The ancients chose from fauna and flora symbolic representations or trade marks for articles of use, such as tools, etc. Thus, the file and saw were represented by rodents. Well, rats have sunk ships gnawing through the bottom. It would require a good file or saw to accomplish like results. The ancients were queer, but methodical.

A Cleveland concern is about to put out nail kegs made of paper pulp. Why not? Chemistry that proved to us that wood could be profitably produced from straw, has been making rapid strides since. There is an immense field for artificial material to replace wood, for the stave supply will be one of the most momentous problems of the next century.

Minding the lesson of the past season, the dealers not in ready communication with the distributing markets will probably put in a better stock of wire cloths, nettings, fencings, etc. Anticipation should be a cardinal virtue with these dealers. To be out of such staples and then being indefinitely sidetracked for want of supply is poor satisfaction all round.

Automobile enterprises are organizing at a terrific rate, completely distancing the pre-evolutionary history of cycle building. Unfortunately, it's haste without caution. A large percentage of the vehicles now building are below the usual American standard. They are not even earnest experiments in some instances. In the mad race after the almighty dollar quality has evidently ceased to be a quantity.

Brevity is the life of a trade name. The Hoboken concern that christened itself the Perfect Compound Kerosene, Gas & Compressed Air Automobile Fire Engine & Motor Mfg. Co., will find it out in short order. Time is too short to memorize nomenclature firm names. Of course this is only meant as a timely hint. The modern name builder and trademark specialist are as much in demand now as the modern ad. smith.

"We are only poor creeping mortals after all, and it's remarkable what a clownish role ice plays in our life. In summer we creep along under a more or less abnormal heat, when even an ice wagon is a welcome sight; in winter we creep along on ice, and the sight is sickening to those not possessed of ice-creepers. Fortunately, every American can afford these commodities, and the two ice seasons are thus happily contrasted."—*Adv.*

Writers are sometimes nolsens-volens the fathers of great inventions. The pen and pencil is the medium of publicity of the wise fool and child; for the smart writer with a business head would not embody a patentable idea in an article or essay without pre-empting accruable benefits. Most business writers are blind to such possible opportunities. They teach others how to succeed and make money while they themselves but receive the publisher's mite.

As the poor, the thieves are always with us. Seldom before was there such a reign of terror. The crooked gentry has returned to hibernate. Many of the crooks are discharged soldiers. They are young men who degenerated in military life. It's always thus under lax discipline.

Were we to re-impress these misled individuals into military service for a stated period and under strict discipline, we might reform them. By crowding them into work-houses, jails and prisons we only repress the good there is left in them. These are only a few of the barbarous heirlooms left by the late war.

The mechanical farmer is fast superseding the man with the hoe, for, never before were modern agricultural implements so generally in demand. Almost any freight train plying through the Southern and Western regions, now flies the banner of modern farming. The producer simply has the means to modernize with. The producer is always a willing purchaser under favorable conditions. Lean years are bad for everybody, but by taking good care of the producer in lean years, we run little risk of forfeiting his confidence in fat years. Agricultural prosperity taken out of our national wealth, would leave but the rind.

We are also far ahead in lock construction of any competing foreign market. All we need now is a keyless lock or autolock that will lock and unlock without losing one's temper, and to make us the locksmiths of the world. But such a lock is hardly feasible without a code of lock signals. That complicates matters, and the key-hole is still open to inspection. But, what a visionary field for the electric genius! And just to dream of having a lock exchange at some future date to fulfil practically the same service as the telephone or messenger call service masters now! Idle dream, but nothing is impossible under the millennial sun.

Were James G. Blaine alive to-day, he would look aghast upon the wonderful development of our tin and terne industry for which he was so ardent a champion. The enormous evolution of the canning industry alone would tax Blaine-time capacity to the utmost. As it is, tin-plate ought to be cheap-priced, and an equitable price schedule will probably be reached after the domestic supply sources have become commensurate. Trust influence had less to do with the stringency of the present situation than the several prolonged strikes accruing shortly after the declaration of the protective tariff. If the policy of the strikers had succeeded, America's tin-plate industry would have been stifled in its infancy.

JOHN B. RINDFLEISCH.

Cleveland, O., Oct., 1899.

South African Diamond and Gold Mines.

The mining interests of Africa, especially the wonderful gold and diamond mines which have attracted so much attention, are the subject of a chapter in the monograph just prepared by the Treasury Bureau of Statistics on Commercial Africa in 1899. Much of the recent rapid development of Africa, especially in the southern part where the greatest rapidity of development has occurred, is due to the discovery and development of extremely valuable mineral deposits. The most valuable of these are gold and diamonds, though incidentally it may be mentioned that the iron, coal, and other mineral deposits of South and Southeast Africa give promise of great value when wealth-seeking man has time to turn his attention from the gold mines to those which promise less rapid, but perhaps equally certain profits.

That the gold and diamond mines of South Africa have been, and still are, wonderfully profitable, however, is beyond question. The Kimberley diamond mines, which are located in British territory just outside the boundaries of the Orange Free State and about 600 miles from Cape Town, now supply 98 per cent. of the diamonds of commerce, although their existence was unknown prior to 1867 and the mines have thus been in operation but about 30 years. It is estimated that 350 million dollars' worth of rough diamonds, worth double that sum after cutting, have been

produced from the Kimberley mines since their opening in 1868-9, and this enormous production would have been greatly increased but for the fact that the owners of the various mines in this vicinity formed an agreement by which the annual output was so limited as to meet, but not materially exceed, the annual consumption of the world's diamond markets. So plentiful is the supply and so comparatively inexpensive the work of production that diamond digging in other parts of the world has almost ceased since the South African mines entered the field, and the result is, as stated above, they now supply over 98 per cent. of the diamonds of commerce.

Equally wonderful and equally promising are the great "Witwatersrand" gold fields of South Africa, located in the South African Republic, better known as the Johannesburg mines. The Dutch word "Witwatersrand" means literally "White Water Range," and the strip of territory a few hundred miles long and a few miles in width to which it is applied was but a few years ago considered a nearly worthless ridge, useful only for the pasturage of cattle and sheep, and for even this comparatively valueless. In 1883, however, gold was discovered, and in 1884 the value of the gold production was about \$50,000. It increased with startling rapidity, the production of 1888 being about five million dollars, that of 1890, ten millions; 1892, over twenty millions; 1895, over forty millions; and 1897 and 1898, about fifty-five million dollars in each year. This wonderful development has attracted great attention to South Africa and drawn thither thousands of people in the hope of realizing quick fortunes. Development, however, showed that the mines could only be successfully worked by the use of costly machinery, and while they have been extremely productive where machinery has been used, they were not of such character as to make hand or placer mining profitable, as was the case in California. The gold production in the "Rand" since 1884 has been over 300 million dollars, and careful surveys of the field by the use of drills and other processes of experts show beyond question that the "in sight" probably amounts to three billion, 500 million dollars, while the large number of mines which have been located in adjacent territory, particularly in parts of Rhodesia, give promise of additional supplies, so that it seems probable that South Africa will for many years continue to be, as it now is, the largest gold-producing section of the world. Recent discoveries lead to the belief that these wonderfully rich mines are the long lost "gold of Ophir," from which Solomon obtained his supplies, making "a navy of ships in Ezion-geber, which is opposite Elath on the shore of the Red Sea in the land of Edom; and Hiram sent in the navy his servants, shipmen that had knowledge of the sea, with the servants of Solomon; and they came to Ophir and fetched from thence gold and brought it to King Solomon."

Rubber Bands.

"Rubber bands have supplanted twine to a great extent in the last few years," observed a salesman in a drug store as he slipped a band around a package. "Up to ten years ago rubber bands were seldom seen outside of a court house or a lawyer's office, and their use was confined almost exclusively to the filing of court documents and paper. Now you find them everywhere. Bands are used on all small packages in drug stores, and they have become an important factor in the grocery business. They answer the same purpose as twine, and are adjusted much easier. And then a more symmetrical package may be put up with the bands, and that is the pride of a good salesman. Yes, the rubber band has come to stay."—*Philadelphia Record*.

There are nearly 1000 warehouses and retail shops in Manila for the sale of the areca nut, the fruit of a certain species of palm.—*Exchange*.

PHILA. NATIONAL EXPORT EXPOSITION.

On Tuesday, October 3d, the Department of Foreign Samples of the National Export Exposition was in readiness for the inspection of the press. This department contains samples of goods manufactured chiefly in Europe and sold in the home markets, and also in all the markets of the world. These goods were purchased abroad by commissioners of the exposition, aided by the consular service of the United States, the United States Government having appropriated \$50,000 for the express purpose of purchasing these samples. At the close of the exposition it is intended they shall become the property of the Philadelphia Commercial Museum.

This department is destined to become one of the most interesting of the entire exposition. It is undoubtedly of great practical value to the manufacturers and exporters. The samples being completely and systematically arranged, illustrate forcibly the requirements of the different foreign markets.

By a careful examination of these foreign-made goods, an exceedingly accurate judgment can be reached as to how far adaptations and alterations must necessarily be made in a similar articles manufactured here, and to what extent characteristic American goods may find a market without serious modification.

Professor Harper, Chief of the Bureau of Information, who has spent the better portion of three years in foreign countries studying the conditions of trade and in purchasing the samples now on exhibition, on giving this private view to the press representatives, explained as follows the purpose of the display of samples.

Foreign trade to-day, he said, is much more complicated than the trade of any individual nation. The United States is almost an amateur in foreign trade. He exhibited colored charts to show that twenty years ago this country had but an insignificant part of the trade of the world. To-day, however, as shown by the diagrams, it is expanding faster in proportion than that of any other nation. The expansion of the trade of the United States within the last twenty-four months is unexampled in the history of the world. The United States exporter is hindered because he is thrust into a trade with which he has no experience and must learn its requirements.

The experience of the Commercial Museums shows that the point he wants most is definite information as to the requirements of the foreign markets.

The Lord Chamberlain, of England, was the first to discover, four years ago, that the Germans were making inroads upon the British export trade, and in order to counteract it he bought up samples of the goods they sold. The German manufacturers, said Professor Harper, have gone into the foreign trade in the most systematic way. They have sent out young men and educated them on the needs of the foreign markets. It is an expensive movement when done individually.

The idea of the Museums is to do what the individual cannot do, collect specific definite information as to the exact requirements of any particular market, and show samples of the goods with which the American manufacturers must compete. This requires a vast amount of labor and money, and can only be accomplished by a semi-official institution, which can secure the financial and moral support of the Government, and not be bound down by red tape. Congress, by a two-thirds vote in the House, passed the bill appropriating \$50,000 for the purchase of samples. During the past two years Professor Harper, assisted by Dr.

Green, visited every country in South America, Australia, India, Japan, China and Asia.

The samples on exhibition were purchased during the last eight months. Only one-third have been installed in their cases. The other two-thirds are expected to arrive and be in place within the next ten days.

In foreign countries they educate the packers to know the requirements of each country to which goods are shipped, and they pack them accordingly. The manufacturer seldom knows where his goods are marketed. The middleman purchases them, and sends them to the packer, who marks them as instructed. As might have been anticipated, there was some difficulty in securing some of the samples for the purposes of the Exposition.

A great difficulty which foreign purchasers of American goods have had to contend with has been the unwillingness of American manufacturers to make just such goods as the foreign customers want. What will please one market cannot be sold at any price in another. Professor Harper instanced one case where a Smyrna merchant had ordered some American prints. They were superior in quality, in color and in pattern to others in that market, but could not be sold, because they did not have a certain finish that the Manchester prints have, and which would have cost but a trifle. Those goods remained unsold after six years, and samples from the lot are shown at the Exposition.

The same may be said of American machinery, in which branch of export America has made greater progress than in any other. There is now shown at the Exposition a collection of foreign machinery that cost from \$7000 to \$8000. Professor Harper pointed to a hay rake, a very clumsy affair, which no American farmer would put in his field. A prominent buyer in Europe has been unable to get them made in this country for his customers in Russia.

The colored charts which hang about the room, the Mulhall-Harper charts, show to the eye the condition of foreign trade of all nations, and make an impression which figures do not make. It is like receiving a liberal education to look them over. From these can be seen the gigantic proportions of the American industries, which must find a market in foreign countries. Nowhere else in the world can there be found such tremendous organizations as the Carnegie Steel Works, the Baldwin Locomotive Works and others of a similar nature. To run them economically they must be run on full time; when so run with the intelligent labor and labor saving machinery with which they are equipped, they can make a cheaper product than can be produced in any foreign country. To run on full time they must have foreign markets. No other nation needs so large a distributing field.

Merchant & Co., Inc., of Philadelphia, New York and Chicago, manufacturers, having one of the largest babbitt metal plants in the world, send us some curious facts about the manufacture of this product in their own smelting works. They manufacture everything in the way of babbitt metals from the lowest to the highest grades. The above company have analyzed several hundred samples of special babbitt alloys during the past year, and have, in a large proportion, reproduced these samples on orders from the concerns from which they came. A manufacturer desiring to have only the best materials in the manufacture of his machinery, would do well to confer with Merchant & Co. regarding prices, etc., before ordering elsewhere. They solicit competitive orders, feeling sure that a trial order will be duplicated.

Export Notes.

The Columbia Electrical Supply Co., of this city, is shipping various electrical supplies to Cuba.

The Estey Wire Works, of this city, recently made a shipment of wire specialties to Havana.

The Buffalo Bolt Co., of Buffalo, N. Y., have just exported 200 cases of carriage bolts to Liverpool.

The Putnam Machine Co., of Fitchburg, Mass., recently forwarded a big lot of machine tools to Genoa, Italy.

The American Tool Works of Cincinnati shipped recently five cases of machine tools to De Fries & Co. of Berlin.

Collins & Co., of Hartford, Conn., are shipping shovels and other specialties to Beira, South Africa, via German ports.

Landers, Frary & Clark, of New Britain, Conn., have exported several cases containing Universal food choppers to Havre.

The Wheeler & Wilcox Mfg. Co., of Bridgeport, Conn., are ready to make a big shipment of sewing machines to Hamburg.

The Union Special Sewing Machine Co., of Chicago, Ill., recently made a big shipment of sewing machines to Liverpool.

The Troy Nickel Works, of Albany, recently made a shipment of its specialties to Lumby, Son & Wood, of Halifax, England.

The American Tool Works, of Cincinnati, recently shipped a quantity of machine tools to De Fries & Co., of Bremen, Germany.

The Bissell Carpet Sweeper Co., of Grand Rapids, Mich., quite lately made a heavy shipment of carpet sweepers to Antwerp, Belgium.

Gould & Eberhardt, of Newark, N. J., a short time ago consigned some of their machine tool specialties to Schuchardt & Schutte, of Berlin.

The Dutchess Tool Co., of Fishkill Landing, N. Y., recently made an important shipment of machine tools to Pierelli & Co., of Milan, Italy.

The J. A. Fay & Egan Co., of Cincinnati, Ohio, very recently dispatched about a dozen heavy cases of woodworking machinery to Swedish ports.

The Wheeler & Wilcox Mfg. Co., of Bridgeport, Conn., recently exported some hundred cases of sewing machines to D. P. Bianchi, of Milan, Italy.

The Union Steam Pump Co., of Battle Creek, Mich., have ready for shipment several cases containing pumps to Newhaus & Pauer, of Vienna, Austria.

The Farrel Foundry & Machine Co., of Ansonia, Conn., are shipping machinery through Hugh Kelly, of this city, for use on sugar plantations in Porto Rico.

The Brown & Sharpe Mfg. Co., of Providence, R. I., recently shipped about a dozen cases of miscellaneous machine tools to J. H. Bachmann, of Bremen.

The Garvin Machine Tool Co., of this city, continue to ship quantities of machine tools, which are designed to be utilized in the shops of the German Garvin Machine Co., now nearing completion in the vicinity of Berlin.

The Union Mfg. Co., of New Britain, Conn., will make a shipment of combination chucks and other specialties to

De Fries & Co., of Dusseldorf, Germany. The order was negotiated through Knauth, Nachod & Kuhne, of this city.

The Brown & Sharpe Mfg. Co., of Providence, will ship at once two No. 5 automatic gear cutting machines, with oil pumps, to J. H. Bachmann, of Bremen. The order was negotiated through Knauth, Nachod & Kuhne, of this city.

Postage and the Export Trade.

A correspondent of ours from Sydney, N. S. W., has made a complaint regarding insufficient postage on matter sent to him from the United States, and we have also received complaints from so many other sources that at last it has become necessary to sound a note of warning which American manufacturers and exporters should heed. Our correspondent states that American firms are extremely careless in the matter of postage paid by them. He and his partner are native Americans, and understand American methods of doing business, and the bulk of their business is in American goods. They keep a mail book and enter every letter posted, and when an answer is received a check mark is entered after it and an account is kept whether a reply is received or not, or whether the letter is returned to the Dead Letter Office. He found on going back over this book that twenty per cent. of the letters were never answered, and that in the matter of underpaid postage from the United States it has cost them on an average of three dollars for each mail during the years the book has been kept. Often this amounts to from twenty-five cents to a dollar on circulars of absolutely no use to the firm of manufacturers' agents, importers, and commission merchants. They find that in twenty years only two failed to reply from English and continental firms and in only three cases was their postage short. He strongly condemns American neglect and methods of business in this respect. Our export trade is now at the highest level which it has ever reached, and if we are to maintain our present satisfactory position it will be necessary for our manufacturers and importers to pay the strictest attention to all the minutiae connected with the business. Our consuls abroad are constantly sending complaints regarding the lax business methods in correspondence and in the matter of postage. There is no difficulty in prepaying all matter sent abroad, so that an onerous burden is not placed on the recipient. Often small matters of this kind defeat the very end which the sender has in view.—*Scientific American*.

Growth of Russia.

Russia, like the United States, has such variety of soil, climate and minerals that she is able to produce within her own borders a large proportion of the necessities and comforts of life. Corn, wheat, barley and rye furnish an ample supply of breadstuffs; vast stock-growing areas produce cattle, horses, hogs, sheep, wool, hides and provisions in abundance; beet sugar is produced in great quantities; hemp and other fibre plants flourish in certain provinces; cotton is successfully grown in the extreme south; virgin forests promise an enormous lumber supply; coal, iron and other minerals required for the manufactures are believed to be abundant, and her mineral oil is so plentiful and cheap that it is freely used as fuel, and is also becoming a serious competitor with our own in the markets of Europe and Asia. With these natural supplies of all materials required for manufacturing, she is strengthening her industrial system, following closely the lines marked out by the United States, and now manufactories of cottons and woolens, iron and steel and their products, machinery, lumber and other of the requirements of her people are being established and increased.—*Tradesman*.

In five years American trade with Australia in leather goods has quadrupled.—*Exchange*.

CURRENT COMMENT OF OUR CONTEMPORARIES.

The *Metal Worker* refers to the opportunity afforded by the present prosperous conditions of our industrial activity and consequent scarcity of goods, in getting rid of the "remainders" and "job lots" frequently accumulated by merchants and manufacturers. "In housekeeping parlance, this is a great year for manufacturers and merchants to 'clean house.' Accumulations of years are being swept out. Unsalable goods and unsalable sizes are going out whenever they are not too far from what people want but cannot get. A variation of 1-16 inch or even $\frac{1}{8}$ inch in thickness is cheerfully overlooked by a consumer who must have some bar iron or steel to finish work which he is doing under pressure for his customers. Buyers of sheets are likewise less exacting as to sizes, even if what they get involves more waste in cutting. Off grade pig iron is snapped up by foundrymen who must have raw material to keep their foundries going and will manage somehow to work it up. Steel billets may run a little high in phosphorus, but some one is found who can use them on his class of work. And the buyers in all cases pay almost, if not quite as much as if they were getting exactly what they need. Bargain days in the iron trade have passed, and it will be some considerable time until they reappear."

The *Iron Trade Review* takes a properly optimistic view of the advantages which advancing prices, both of material and labor bring toward continued prosperity. "Nor will the momentum of the greater purchasing power of the country's wage earners in manufacturing and mining industries be quickly lost. It has been gathering strength month by month. Savings bank deposits in the past two years have reflected the magnificent increase in the total wage of the country. Theoretically, advancing prices mean curtailed consumption; but the theory applies to advances in prices with no accompanying increase in purchasing power. After a period of starveling consumption the country is now compensating for lost time by supplying legitimate needs, and more than that, by expanding its facilities to care for the ordinary demands of a population largely augmented since the last period of prosperity and having nearly a decade's growth of new needs. For nothing is truer than that as the world grows older the list of necessities of the average man is constantly recruited from the old list of his luxuries."

The *Stoves and Hardware Reporter* refers to a prevailing cause for complaint in the trade to which we ourselves have referred:

"Complaint is being made by the Hardware jobbing trade that the manufacturers are not treating them with a fair degree of liberality in all cases. This has particular reference to shipments and the delay in making them, this delay, as stated, being not always caused by an actual inability of being more prompt, but because of a favoritism shown to buyers who are paying higher prices for goods than attach to contracts made earlier in the year, or before the present high values received their first impetus. The same condition is found in other lines where buyers are offering a premium for quick delivery and are having their orders filled at a consequent expense in time and possible profit for those whose contracts are of an earlier date and at lower figures.

"This is a decidedly unusual, if not unique condition, and the complaint against the manufacturers is claimed to be justified by circumstances. But the latter have also a complaint against the jobbers. They say the latter have

been in the habit of placing uncertain orders and not specifying exact amounts, but always insisting on a liberal construction of contracts, often cancelling orders when these are not likely to prove profitable, and that they are now insisting on prompt deliveries at a time when promptness is difficult if not impossible, while also managing to forget or ignore the courtesy and consideration shown them on previous occasions when conditions were different."

The *Iron Age* makes reference in the following to the movement for the purchasing of American machinery by our competitors, which has no doubt been in the thoughts of many readers who deemed it short-sighted policy and a risk to our own supremacy. "In every department of production in which any advantage has been found to exist in the United States by reason of the use of special tools or machinery, or of improved special methods of work, it may be depended upon that the people of those countries with whom our recent new trade has brought us into competition will not rest until they possess similar machinery and can employ the same methods. This is one explanation of the large exports of metal-working machinery, wood-working machinery and machine tools from the United States to-day; it is with a view to meeting more effectively the industrial competition of this country. Under the policy which influenced some governments no longer than a century ago such exports would not be permitted. But it has been demonstrated that the country which depends upon imported machinery or methods is not, in the end, to be feared as a competitor by the country where those machines and methods originate. The country to be feared in such a connection is that whose people can produce more effective machinery, better labor-saving methods or manufactured articles of a higher quality than our own."

"The Man in the Corner," in his interesting *Monthly Letter*, has this to say about the prevailing conditions surrounding the Hardware trade: "Combinations and trusts have had their part in the advance in prices, but the fact that every machine that can produce anything in any line is doing its utmost, proves that an artificial limit to production has nothing to do with the scarcity of goods. With the ore men, hungry for their share of the good things going, and awaiting in eager expectancy the approaching time for new contracts; with the pig iron and steel men booked ahead for more than six months' product and refusing to accept orders for earlier delivery; with big advances in wages since the new era began, making material reductions in prices of goods a matter of serious difficulty; with business failures one-third less in number and two-thirds less in financial loss than a year ago—and above all, with that unstable, unreliable, elusive factor in trade, Public Confidence, fully restored, there is no reason why you and I and the rest of us cannot depend upon good times for some time to come, with lots of hard work and heavy pushing, and something to show for it at the end of the year. Some day, there will come an end to these rapid advances, and the famine of goods and material will diminish, and we shall find ourselves upon a good, sound commercial basis, with nothing lost except an accumulation of bad business practices and useless trade encumbrances that have been sloughed in the time of contraction and rehabilitation. The only thing to fear is that our national penchant for extremes may lead to a renewal of trade extravagance and bring another punishment, but we have burned our fingers too recently in that fire to make the danger of another scorching very great just now. The times are good, and we are here to enjoy them."

NEW GOODS AND SPECIALTIES.

Aluminum Oil Heaters.

The Novelty Mfg. Co., Jackson, Mich., are again in the market this season with an exceedingly attractive line of aluminum oil heaters, the sales of which, since they were introduced by this company, have been of sufficiently phenomenal character to convey the fact that they have been the most popular of this special line recently placed before the Hardware trade. We present herewith illustrations of two of these. Fig. 1 is the "Bargain" oil heater, intended to be retailed at \$5, the lowest price of the entire line. It is made entirely of polished steel, polished brass and polished aluminum; very nicely japanned and nickel-plated. Manufactured as it is from material of this description, there are no castings to break, consequently it may be considered as nearly indestructible as an article of this kind can be made. It is claimed to burn with a clear, white

FIG. 1.

FIG. 2.

flame, and without smoke or odor, every stove being guaranteed. The dimensions are: Height, 26 inches; size of base, 13½ inches; of drum, 7 inches. It requires a circular wick 8 inches, and weighs complete but 10 pounds. Fig. 2 shows the aluminum oil heater No. 30, which is represented in the illustration without a bail; but if desired, it can be furnished with a bail similar to the one represented in the cut of the "Bargain" Oil Heater. These stoves are provided with a wick device that is original with this company, and which is claimed to be so simple that even a child could operate and re-wick the stove. The upper part of the stove is hinged to the lower part in such a manner as to permit of its being easily tipped back for the purpose of lighting, re-wicking, or filling. All parts are interchangeable, they being put together entirely with polished and nicked-head stove bolts. The founts and burners are portable. The tops of all these aluminum stoves are removable for the purpose of placing on kettle, oven, etc., if required. The company also manufacture two intermediate sizes: No. 24, which is a size larger than the "Bargain" heater, and is listed at \$6 each; and the No. 45, which is one size larger than the No. 30, and is listed at \$9. The stoves make a very hand-

some and attractive appearance, and have become exceedingly popular. The ease and facility with which they can be used in any part of the house requiring a greater degree of warmth, makes them well worthy of the attention of those requiring something of this kind.

The Magic Hanger and Fastener.

The Whaley-Dwyer Co., St. Paul, Minn., are manufacturing the storm sash and window screen hanger and fast-

FIG. 1.

ener, which we illustrate in this article, and which they are marketing under the name "Magic." The device, as will be seen, permits the sash or screen to be removed or replaced quickly and easily from the inside of the window. In Fig. 1 is shown the hanger and in Fig. 2 the patent fastening or ventilating rod. The sockets are provided with lugs or hinges, which prevent the sash falling out of position when it is being inserted or detached, which operation is readily done by a simple method of holding the sash

FIG. 2.

at the proper angle and pushing upward, or the reverse action. These hangers and fasteners are made of malleable iron, and finished in enamel or tin. The fastening or ventilating rods on either side allow the sash to be open for purposes of airing the room or washing the window, and by their aid, the sash can be locked securely through the staple on the side and lie snug against it when the sash is closed or drawn in. They are all neatly finished in nickel-plate. These should meet with a ready sale wherever introduced.

The Ice Cycle.

The Ice Cycle Mfg. Co., Milwaukee, Wis., are introducing through the Hardware trade a set of patented attachments to be used in converting a bicycle into an apparatus that may be used on either ice or packed snow. In the illustration which we present herewith, the bicycle is shown after it has been converted by the aid of this equipment into an ice cycle. The attachment consists of a single runner for the front wheel, and a double runner for the rear wheel, either or both of which can be applied with equal readiness to a single bicycle or a tandem. The runner for the front wheel is similar to a speed skate, and is securely locked to the wheel by means of a hinge-like clamp, which it is necessary to fasten around the rim, and is held firmly in position by the use of two thumb-screws. The rear double runner is provided with a rimless wheel, in which are twelve spokes, and these are substituted for the rear wheel. The runners for the rear wheel are seven inches broad, and are manufactured from polished steel. Each individual spoke of the rimless wheel is equipped with an ice-dog made of tempered steel, and so constructed as to send the machine forward at an exceedingly rapid rate of speed, when the wheel is set in motion. The ice-dogs are inserted in the ends of the spokes, each of them being provided with a tension spring sufficiently strong to counteract all possible vibration, the tension being regulated by

lever is fastened to the inside of the trap as well as the bait hook, so that to set the trap, it is only necessary to raise the lever to the top of the trap, catching it over a small projecting piece of tin, and when the mouse attempts

to secure the bait held by the bait hook, the action releases the lever, striking the mouse over the back of the neck and holding him securely.

Savings Bank and Fortune Teller.

The Penoyer Mfg. Co., Nos. 57-61 Dearborn Street, Chicago, Ill., are offering a very neat little article for the purpose, which they call the Savings Bank and Fortune Teller, and of which we give an illustration herewith. The bank is oblong in shape, three inches long, two inches wide, and three-quarters of an inch thick. As the coin is deposited, it sets to whirling a small wheel located under a glass. When the wheel stops, an arrow points to a letter which is a key to an index which is found on the back of the bank. Observing the letter under the arrow, reference is then

simply raising or lowering the frame. The adjustment of the tension is accomplished by a device similar to the general adjustment on the ordinary bicycle, in order to suit the weight of the rider, or the condition of the surface of the ice or snow. The front wheel is rigidly held by being strapped to the fork. Any gear may be used in connection with this equipment, as the rear sprocket wheel is detachable, and also of standard thread. As the parts are all light and compact, they may be carried on the handle bars to ice fields when snow-riding is not sufficiently practicable, as it is possible to convert the bicycle into a self-propelling sleigh in from two to five minutes. The company issue a neat catalogue descriptive of the device, and also give results of numerous trials that have been made of this attachment during the past winter. It is likely to prove exceedingly popular.

Metal Choker Mouse Trap.

Among the numerous traps for various purposes manufactured by the Animal Trap Co., Abingdon, Ill., the Metal Choker Mouse Trap, which we illustrate herewith, has met the approval of the trade and become exceedingly popular. The body of the trap is similar in appearance to the ordinary five-hole tin choker that has been on the market for a number of years, and still commands ready sale, but the setting and catching device differs from that trap very materially. In the one presented herewith, a small coil spring

made to the reverse side of the bank, which also has the alphabet down one side, and opposite each letter a line of fortune. Following the list down to the one as indicated, you read the fortune of the one who places the coin in the bank. The device is carefully and strongly put together, not liable to get out of order, and will be found an interesting novelty for children, who are anxious to save a portion of their pennies, nickels or dimes, the telling of their fortunes acting as an incentive. It will hold from two to five dollars, and when full, the coin can be removed, and the bank readily closed, and in readiness to receive further deposits.

Yankee Chuck With Drill Points.

North Bros. Mfg. Co., Philadelphia, John H. Graham & Co., No. 113 Chambers Street, New York, agents, among their numerous specialties of a similar character, are placing before the Hardware trade a chuck and drill points,

FIG. 1.

which we illustrate herewith in Figs. 1 and 2. These are intended to be used in connection with their Yankee Spiral Ratchet Screw-Drivers No. 30. The outside of this chuck corresponds with the end of screw-driver bits used in No. 30 screw-driver, while the inner portion of the chuck is made to conform to the ends of the drill points that are

used in the company's Yankee automatic drill No. 40. In using the chuck, the drill point is first put into the chuck, as illustrated in Fig. 1, and the two together put in chuck of the screw-driver in same manner as bits are put in, the screw-driver being set for right-hand and operated by a push or ratchet movement of screw-driver. Eight drill points 1-16 to 11-64-inch inclusive, as shown in Fig. 2 are

FIG. 2.

furnished with each chuck. The chuck and eight drill points are put up in a small round wooden box. These are packed in paper boxes containing one dozen.

The Full Moon Acetylene Lamp.

We present herewith an illustration of a new Acetylene Lamp which is manufactured by F. E. Baldwin, New York, and is placed upon the market and before the Hardware trade by Hermann Boker & Co., No. 101 Duane Street, New York, who are sole agents for the sale of the same. This lamp is specially designed for bicycles, carriages, etc. It is made of brass nicely nicked, is 5 1/8 inches high, and has a reflector three inches in diameter, and when empty, the lamp weighs only nine ounces. Through a screw cap at the top, water is introduced and the flow entirely controlled by turning the wire indicator, which is shown on the top of the lamp, either to the right or left. One of the principal difficulties in burning carbide is in keeping the channels clean and free from ordinary obstructions. In the "Full Moon" lamp this is accomplished with regard to the water-feed by a very simple and ingenious device by means of which the water tube is automatically freed of any ordinary accumulations of carbide powder every time the water indicator is used at all. The carbide is placed in a cylinder fastened to the bottom, the cylinder

being two inches high and 2 3/16 inches in diameter. Above the carbide is a perforated disk and tube, the latter being wound with muslin and the charge of carbide held securely in its place by a brass spiral spring attached to a solid metal disk above. Three hinged eccentric clamps, which are shown in the illustration, secure the carbide chamber to the bottom of the lamp, and keep it rigidly in its position. It will be noticed that the flame is projected straight ahead

from a lava tip, and there being no lens or glass in front, the reflector can be placed at a sufficient angle to throw the light on the road immediately in front of the wheel. The main points claimed by the manufacturer are its extreme simplicity, its great lightness, and the manifest ease with which it can be maintained when in use.

Winslow's National Club Skate.

The Samuel Winslow Skate Mfg. Co., Worcester, Mass., are already on the market with their improved skates for the season now approaching. The Winslow National

Club Skate for 1899, we illustrate herewith. This skate is constructed with a device calculated to meet the views of skaters, some of whom desire to have the runner in the centre of the foot, while others prefer it out of the centre. So to supply these wants and suit all tastes, a side-clamp adjustment has been invented which permits the skater to use his own judgment in fixing the runner in any of many positions. This skate is also valuable to wearers of shoes that are made on the now popular crooked last. Up to the present time this improvement is only applied to their Nos. 9 and 11 skates, which are made of the National Club style, as the rink and figure skates have another device which accomplishes the same object.

None-Such Coffee Mill.

The Bronson Co., Cleveland, Ohio, with John H. Graham & Co., No. 113 Chambers Street, New York, selling agents, are manufacturing and distributing through the Hardware trade the new and desirable style of coffee-mill which we illustrate herewith. This is known as the "None-Such," and is a handsomely gotten up sheet-metal box-mill, the pictures surrounding it being finely lithographed. It holds a pound of coffee, and is calculated to grind it as fine

as may be wanted for family use. In grinding the coffee, it is claimed it does not crush the berry into a powder, but cracks or cuts it in grains like sand, so that the entire strength of the coffee is obtained by natural processes. Another thing claimed for coffee made in this way is that it can be settled perfectly with less trouble than is usually the case. It is a very attractive mill, and likely to prove popular.

RECENT TRADE PUBLICATIONS.

THE SIMMONS HARDWARE CO., St. Louis, Mo. Catalogue No. 331, covering the Lamp Department of their extensive establishment. This is a catalogue of 250 pages, 10½x13 inches in size, in which is embraced the largest assortment of lamps of every description that one would suppose possible to carry in an assorted stock, comprising everything in the way of sewing lamps, night lamps, parlor lamps, reception, banquet and library lamps. Included in this extensive gathering is a large assortment of Venetian lanterns, together with Rochester chandeliers suitable for lighting halls, churches, schools, stores, billiard halls, show windows, etc. The smaller styles of lamps on a less liberal scale of magnificence are also included, embracing all the lower-priced varieties now being handled by the Hardware trade. To this is added all the trimmings and essentials necessary for keeping the stock in good shape, every description of chimney being noted and illustrated, as well as burners of every description, even including gas fixtures and gas supplies, and the various styles of Welsbach burners now on the market, with the trimmings essential for performing their duty properly. These are all laid out in a manner readily understood, and from which orders can be successfully given by mail. Mica lamp goods are also represented, including canopies, protectors, chimneys, etc.; also an assortment of wire frames for making silk and paper shades; the necessary crepe paper for decorative purposes; silk lamp shades in large assortment; paper and glass lamp shades, plain and decorated, including the modern bent glass shades and the extra fine large globes now so popular. The catalogue also contains illustrations of jardiniere stands or tabourettes and fancy tables, from the ordinary variety up to those with onyx tops, and from nicked trimmings to those finished in gold plate.

Part of the catalogue is devoted to illustrating a large variety of art photographs which are included in the stock of this department, many of which are beautifully framed and priced throughout for ordering purposes. In fact, this is a very desirable publication for the trade, and one that will be valued highly by those receiving it. Many of the illustrations are printed in colors and show in a very graphic manner how the goods must look in reality.

THE LOGAN-GREGG HARDWARE CO., Pittsburg, Pa. Fall and winter catalogue for 1899, including guns and ammunition and sporting goods generally, full assortment of weather strip and door springs and door checks, children's sleighs, boys' hardwood coasters, American Club and other skates, ice creepers, sleigh bells, horse blankets and carriage robes, lanterns, gas stoves, oil stoves, meat cutters in large variety, fire-irons, shovels, poker, etc.; clocks and traps of every description, together with a line of table cutlery, butcher knives and tools in large variety. Many pages are devoted to a display of pocket cutlery and razors; sewing machines are also represented and a full line of padlocks. In fact, everything that is possible for the Hardware trade to need for a supply for the winter seems to be included in the assortment given in this catalogue. Accompanying the volume is a discount sheet applying to every page, by which current prices may be readily obtained.

THE ART METAL CONSTRUCTION CO., Nos. 1033-34 New York Life Building, No. 346 Broadway, New York. A very original and unique catalogue showing in illustrations that are separately attached to the pages of the pamphlet various descriptions of the goods that they

make, which are manufactured under the trademark of the "Fire Proof" brand, which covers office desks, letter files and all the necessary fixtures and appurtenances that should accompany fireproof construction in any large office building. These are all constructed from steel and are finished in enamel; even the roller book shelves that accompany the office fixtures are constructed of this fireproof material. Samples of all these desirable articles can be found at their salesroom, to which they invite the attention of those desiring the same.

F. E. MYERS & BRO., Ashland, Ohio. Envelope pamphlet of 14 pages, intended to be a reminder to those desiring any of the lines of goods largely manufactured by this concern. These are cleverly illustrated by humorous pictures and from indications presented therein will be preserved by those who receive it.

THE STANDARD TOOL CO., Cleveland, Ohio. 1899 Manual, evidently designed for distribution at the National Export Exposition. This, while embracing on various pages in illustrations in color the many specialties manufactured by this company, has accompanying the same many pages of information in regard to sizes, wire gauges, drill gauges, speed of drills, weight of bar steel per foot, decimal equivalents in a very full and complete table, together with a number of recipes for annealing and hardening steel which will be found welcome by those interested. This little pamphlet is also interleaved with quadrille paper for the purpose of taking memoranda or adding to the assortment. It is a very useful little souvenir of the Exposition.

THE SMITH & HEMENWAY CO., No. 296 Broadway, New York. Envelope pamphlet catalogue, including in its contents the large variety of specialties handled by this concern, commencing with "Giant" and other nail pullers, tack pullers and glass cutters, wrenches, cutlery, Swedish razors, Belgian oil hones and a full line of the Utica Drop Forge & Tool Co.'s nippers and pliers, for which this company are selling agents. Included in the assortment will be found as well a variety of specialties, from can openers and nut cracks, etc., to hammers and hatchets. In fact, they have crowded into a very small space a large variety of goods.

THE ERICSSON TELEPHONE CO., No. 296 Broadway, New York; the Smith & Hemenway Co., agents. Circulars regarding the Ericsson Swedish telephones now being introduced by the above company and meeting with considerable popularity.

P. & F. CORBIN, New Britain, Conn. A very handsome descriptive catalogue prepared for distribution at the National Export Exposition in Philadelphia. Fully illustrated with their perfect half-tone engravings, printed on excellent coated paper and showing great care in the compilation of its contents for the purpose intended. It is evidently intended to make a first-class impression, which it will undoubtedly do. Included in its contents they give illustrations of a few of the large office buildings in New York and Philadelphia which are furnished throughout with Hardware from the P. & F. Corbin factory. The entire pamphlet reflects credit upon the facilities enjoyed by this company for turning out excellent work.

THE D. W. BOSLEY CO., Chicago, Ill.; John H. Graham & Co., Eastern agents, No. 113 Chambers street, New

York. Pamphlet catalogue of 36 pages, covering a line of weather strips and window cleaners, etc., with the manufacture of which this company has long been identified. The assortment includes the "Excelsior" weather strips, the patent flexible weather strips, Bosley's metallic weather strips, "Peerless" window cleaners, "XLCR" window cleaners, floor scrubbers, counter cleaners, etc., and also shows in a thorough manner the full line of Bosley's felt weather strips that have become popular with the trade. This line of goods has been manufactured by this company since 1880 and, giving their entire attention to this one line, has enabled them to present these goods in such convenient shape that they readily form a desirable part of a Hardware stock during the Fall season. Hardware dealers handling this line or meditating the same will do well to write for this important catalogue.

THE CENTRAL HARDWARE CO., Philadelphia, Pa. Pamphlet catalogue of 24 pages, covering a line of Hardware specialties such as sash fasteners, sash lifts, ornamental barrel bolts, drawer pulls, thumb latches, plain and ornamental, cast tower, barrel and shutter bolts, chest handles, patent coat hooks, etc. They also make a line of frame pulleys, including the "Niagara" and "Norris" patterns, etc.

J. K. WILDER & SONS, Monroe, Mich. Pamphlet catalogue of 56 pages, in which are shown the large variety of farm machinery, of which they have been wholesale manufacturers for thirty years. Included in the assortment will be found feed cutters of every variety, the necessary appliances and attachments for the same, marketed under the name of the "Swiss," the "America" combined feed cutters and shredders, single and double gear horse-powers, Universal swivel carriers, corn shellers, feed grinders, flexible steel lawn rollers, made in large variety, and the improved plows that have long been made by this firm. It is a very desirable catalogue of its kind.

SHENANGO SPECIALTY WORKS, LTD., Sharpsville, Pa. Catalogue of specialties manufactured by this company. Pamphlet of 50 pages, fully illustrated, showing various styles of wire window guards, office and partition railings, wire baskets of a number of styles, revolving fountain flower stands, store front guards, vegetable boilers and strainers, and numerous other specialties manufactured from wire. Included in the assortment are steel wire folding mats and matting, and a new wire hammock. They are also large manufacturers of combination fencings of various descriptions for field, stock and lawn fencing, in which they deal very largely.

Advertisers' Corner.

Nowadays, in order to get business, you have got to tell people just what you have to sell and why they ought to buy it. You have got to go into details and get right down to business. You have got to talk intelligently and cleverly.—C. A. Bates.

Don't be stiff necked in your trade paper advertising talk. The more cordial you are, the nearer you can get to the level of the reader's understanding, the fewer technical terms you use, the stronger will be the impression.—*The Wheel*.

When an advertising company sees a good location for a billboard a regular contract is made with the owner for a year or six months. If it is on a vacant lot the lease is made subject to cancellation if the owner wishes to put up a building. The rental varies according to location. If the lot faces a street car line where thousands pass every day, the rent frequently comes close to paying the taxes. The advertising company secures its business through

solicitors. The advertiser submits his ideas for the sign and leaves it to the advertising company's experts to work up a design. If the advertiser is ambitious, like Governor Pingree, for instance, he gives the company his photograph to be worked into the "ad." The whole secret of billboard advertising is to use exactly the same colors, and to have all the signs for the same article exactly alike. For this reason the designs are all worked out in colors by the artists in the office, and are then turned over to the billboard artists. The latter do not work according to scale, which is considered inartistic. They measure the board the same as canvas. Some of the better painters make the designs and paint them on the billboards also.—*Chicago (Ill.) Tribune*.

Advertising should be used in business just exactly as medicine is used in sickness. If a small dose is not enough give a larger one. If the large dose seems too big, or if the patient improves rapidly, the dose may be diminished. You cannot carry the simile out to the bitter end, however, because, while the patient may get well and not need any medicine, the business never arrives at that stage.—C. A. Bates.

An advertisement that beats all around the bush and talks about the weather and the little birds singing in the branches, and all that sort of rubbish, not only uses up space that has to be paid for, not only makes poor writing from a literary standpoint, but obscures and handicaps the particular element of advertising that is most attractive to the people you want to reach.—*Printers' Ink*.

Mr. Frank G. Sherwin, of Battle Creek, Mich., rejoices in the fact that he has red hair, and is known in the Michigan town as the "Red-headed Grocer." When Mr. Sherwin started in business several years ago he decided that his locks could be turned to advantage, and the idea has been a decided success from the start. All the wrapping paper, bags, etc., employed by the firm are printed in flaming red ink: "Frank G. Sherwin, the Red-headed Grocer," and frequently the firm's advertising matter is signed "Ever Ready," "Always Ready," and so on. These little pleasantries seem to please the people. Last year, when Ringling Brothers circus was in Battle Creek, the following advertising scheme was used: Arrangements were made with the managers of the parade to use the largest elephant for advertising purposes, and as Mr. Elephant's place was the first in the procession, his size and position made him one of the conspicuous features, made more so by the "Red-headed Grocer's" ad., which consisted of two streamers, one bearing the inscription: "This elephant eats 'Red-headed Groceries,'" the other: "The best teas and coffees on earth at the 'Red-headed Grocer's.'" This was a winner with everyone, and was more talked about than the circus. Arrangements had been made with a photographer to photograph the elephant directly in front of the store. Advertising cuts were made from the photograph and used in the newspapers and in circular matter. Mr. Sherwin has the reputation of being one of the most novel advertisers in Battle Creek.—*Chicago Dry Goods Reporter*.

Cements and Putties for Mason's Use.

Dissolve alum in water until the fluid will not dissolve any more, then mix with this sufficient plaster of paris to make a stiff dough and bake it; when baked hard and dry grind it to powder, and for use mix with water as wanted, and apply it like plaster. Various pigments may be mixed with it (while in the dry state, after baking and grinding) to make the cement imitate the color of any kind of marble; it is required to cement or join. Joints made with this compound can be polished as smooth as glass, and thus the joint in the marble work may be rendered imperceptible.—*Tradesman*.

REVIEW OF THE MARKETS.

Hardware: Advances form the most prominent feature of the market. Even the most conservative lines are compelled to succumb and revise previous quotations to some extent. A belief seems to exist that it will not be long before a retrograde movement will commence. Although with a world-wide scarcity in metals, and orders booked ahead for months, it would puzzle one to justify the belief. As will be noticed in this review, there are no signs of weakening, and the general report is that goods are difficult to obtain even at the higher prices.

Wire Nails: Although another advance in price on Wire products has been among the fears of the trade since our previous issue, it has not been deemed advisable to make the change at this time, and Wire nails are still quoted at the same prices as then announced, present quotations being as follows, f. o. b. Pittsburgh, terms 30 days net:

To jobbers in carload lots \$2.90
" " in less than carload lots 2.82½
To retailers in carload lots 2.95
" " in less than carload lots 3.05

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock \$3.10
" " less than carloads on dock \$3.25
Small lots from store \$3.25 to 3.40

Cut Nails: To get more in line with its rival the Wire Nail, the Eastern manufacturers advanced their quotations since our recent issue 15 cents per keg. The following quotations representing the present state of the market, are f. o. b. Pittsburg, the freight being added to make a net price delivered at destination:

To jobbers in carload lots \$2.55
" " in less than carload lots 2.60
To retailers in carload lots 2.65
" " in less than carload lots 2.80

New York business continues fair under the prices named as follows:

Carload lots on dock \$2.70
Small lots from store \$2.90

Barbed Wire: No change in the prices of barbed wire keeps the market in a good healthy condition with an active demand. The following quotations represent the market, and are f. o. b. Pittsburg, net cash, thirty days:

To jobbers in carload lots, Painted \$3.25
" " Galvanized 3.40
" " in less than carload lots, Painted 3.27½
" " Galvanized 3.42½
To retailers in carload lots, Painted 3.40
" " Galvanized 3.55
" " in less than carload lots, Painted 3.50
" " Galvanized 3.65

Smooth Wire: Governed by similar conditions, the smooth wire market is in a state of continued activity. Prices remain unchanged, and may be stated as follows, f. o. b. Pittsburg, 30 days net cash:

To jobbers in carload lots \$2.65
" " in less than carload lots 2.67½
To retailers in carload lots 2.80
" " in less than carload lots 2.90

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

Wood Screws: The manufacturers of Wood Screws, under date of September 28, made a further advance in the prices of this leading staple, their printed discounts at present being as follows:

Flat head iron discount, per cent.	80
Round and oval head iron " "	75
Round and oval head piano, unpolished " "	75
Balluster head iron " "	75
Flat head brass " "	77½
Round and oval head brass " "	74½
Flat head bronze metal " "	72½
Round and oval head bronze metal " "	70

A large business has been the feature of the screw market for some time.

Peck, Stow & Wilcox Co. Under date of September 30th, Peck, Stow & Wilcox Co., Southington, Conn. and No. 27 Murray Street, New York, have issued a new Discount Sheet, which is No. 3 of the series applying to the list prices as printed in the 1898 catalogue. The printed discounts of the discount sheet are the regular discounts on their goods. The classes of goods are designated by being marked A and B, in a number of special lines, the A line

being subject to an additional discount of 10 per cent. beyond the printed discounts, the B goods being net by comparison. The other goods represented in the discount sheet are subject to an additional discount of 20 per cent.

Smith & Hemenway Co. have recently issued a pocket catalogue covering every line of goods represented by them, and arranged so that a flat discount can be made from the entire catalogue. The discount is 40 per cent.

Curry Combs.—The current quotations in this important line of goods have been materially stiffened during the past ten days, and from present indications it may be safely stated that new and revised discounts already in contemplation will make a material advance in prices at an early date.

Hand Bells, etc.—This line of goods has stiffened in price since our previous issue and is now quoted at discounts that are ten per cent. higher than represented the market at that time.

Tacks, Brads, etc.: The tack market, on account of the scarcity in the proper raw material and the constantly advancing prices, has been more than usually strong, with an upward trend to current quotations. We have received from the Shelton Co., No. 64 Reade Street, New York, Discount Sheet No. 13, giving manufacturers' quotations on this important line of goods, that may be considered fully up to date.

Discount Sheet No. 13 to apply to Tack Manufacturers Hardware List of January 15th, 1899.

Coach and Lag Screws: The list on Coach and Lag screws has been recently revised, the new list taking effect October 1st. The revised list is as follows:

Length in inches.	5-16	¾	7-16	½	9-16&¼	¾	1
1 1-2	\$2.25	\$2.70	\$3.15	\$3.75
2	2.45	2.90	3.47	4.11	\$5.00
2 1-2	2.65	3.22	3.79	4.47	5.50	\$7.00
3	2.85	3.48	4.11	4.83	6.00	8.60	\$12.50
3 1-2	3.05	3.74	4.43	5.10	6.50	9.30	13.50
4	3.25	4.00	4.75	5.55	7.00	10.00	14.50
4 1-2	3.45	4.26	5.07	5.91	7.50	10.70	15.50
5	3.65	4.53	5.39	6.27	8.00	11.40	16.50
5 1-2	3.85	4.78	5.71	6.63	8.50	12.10	17.50
6	4.05	5.04	6.03	6.99	9.00	12.80	18.50
6 1-2	6.35	7.35	9.50	13.50	20.50
7	6.67	7.71	10.00	14.20	20.50
7 1-2	6.99	8.07	10.50	14.90	21.50
8	7.31	8.43	11.00	15.60	22.50
9	7.95	9.15	12.00	17.00	24.50
10	8.87	10.00	13.00	18.40	26.50
11	10.59	14.00	18.80	28.50	37.70
12	11.31	15.00	21.20	30.50	40.30

No change has been made in the discount, which remains as before, 65 and 10 per cent. on the Common point and 65

and 5 per cent. on the Gimlet point. The following extras are included as a part of the Coach and Lag screw list: Hexagon heads, 10 per cent. extra; ore washer screws, 20 per cent. extra.

Coil Chain: James McKay & Co., Pittsburgh, Pa., under date of September 25, quote the following revised prices for Coil Chain. Terms net cash, f.o.b. Pittsburgh, Pa.

Cents per pound.		Cents per pound.	
3-16	8.50	1/2	4.75
1/2	6.75	9-16	4.75
5-16	5.75	5/8 and 11-16	4.75
3/4	5.00	3/4 and 13-16	4.55
7-16	4.85	7/8 to 1 1/4	4.50
B. B. crane chain 1 1/2 cents per pound over coil.			
B. B. " " 1 1/2 cents per pound over coil.			
Dredge chain 4 1/4 cents per pound over coil.			

One-fourth to one-half cent per pound should be added to above prices on less than cask lots.

Machine Bolts: We present below the new list prices agreed upon by the associated manufacturers of Machine bolts, going into effect on October 1st. In the revision of the price list previously in use, it was found necessary to make many changes, justifiable in consequence of radical advances in prices of raw material which seems likely to influence the markets for a long time to come.

Length in inches.	1/2	5-16	3/4	7-16	1/2	9-16 and 5/8	3/4	1	1 1/4	1 1/2

30	6.26	8.84	11.52	14.20	18.42	26.86	35.70	50.40	72.00	79.50

Discounts remain as lately announced, the printed quotation being 50 and 10 per cent. In connection with above new list, the following extras are given as forming part of the changes agreed upon: Bolts, with hexagon heads or hexagon nuts, 10 per cent. extra; if both hexagon heads and hexagon nuts, 20 per cent. extra; joint bolts with oblong nuts, bolts with tee heads, askew heads and eccentric heads, 10 per cent. extra.

Horse and Mule Shoes: The Rhode Island Perkins Horse Shoe Co., Providence, R. I., under date of October 6th, withdraw all previous quotations on Horse and Mule shoes, and announce the following revised prices on their production:

Cents per pound.	
Perkins extra light, light, medium and heavy pattern horse shoes, No. 2 and larger	3 6-10
" L ng heel shoes, No. 2 and larger	3 6-10
" Favorite shoes, No. 2 and larger	3 6-10
" Iron countersunk shoes, No. 2 and larger	3 6-10
" Snow, road or trotting shoes, No. 2 and larger	3 6-10
" X. L. steel horse shoes, No. 2 and larger	4 1-10
" Cow Boy shoes, No. 2 and larger	4 6-10
" Cow Boy shoes, plain, No. 2 and larger	4 1-10
" Thin steel countersunk shoes, No. 2 and larger	4 6-10
" Mule shoes, No. 1 and larger	3 6-10
" o and oo mule shoes	5 1-10
" Jack shoes	6 1-10
" Light, medium and heavy toe weight shoes, No. 2 and larger	5 35-100
" Extra light and light side weight shoes, No. 2 and larger	7 1-10
" Calked shoes, No. 2 and larger	4 1-10
" Calked mule shoes, No. 1 and larger	4 6-10
Goodenough army and heavy patterns, No. 2 and larger	3 85-100
" Winter pattern, No. 2 and larger	3 35-100

All horse shoes No. 1 and smaller, 1/2 cent per pound extra. Free on board cars at Valley Falls, R. I. All above subject to freight equalization to all points. Terms of payment, cash in thirty days from date of invoice, or two per cent. discount for cash in ten days. Interest at 6 per cent. to be added to all accounts not paid at maturity. Prices subject to change without notice, and not guaranteed against future decline. We decline to book

orders for future delivery, except at prices ruling at time of shipment. Strikes of operatives or suspension in case of fire will relieve us from prompt fulfillment of contracts. Shoes assorted as required.

Linseed Oil: The Dean Linseed Oil Co., under date of October 2d, quote as follows:

In lots of less than 5 barrels	41 cents per gallon.
In lots of 5 barrel or more	40 cents per gallon.

The five barrel price only applies to deliveries of that quantity at one time. Boiled linseed oil, 2 cents per gallon higher than raw. Calcutta oil, 65 cents per gallon. Above prices are subject to change without notice.

THE ALBANY TRADE.

We report trade good with orders coming in freely and requests for prompt shipments. Collections continue slow accounted for perhaps by increased costs, requiring more capital, also by the rush of business that has prevailed for some time and has not permitted the smaller dealers to give collecting the attention it continually needs.

The higher prices for staples seem to be so well recognized now as not to call forth the comment produced in the earlier stages of the advancing market.

No doubt many dealers would be glad to place orders for

future shipment at present prices, but the custom is not likely to prevail to the extent of former years, as thirty days ahead is as far as some of the most staple goods can now be bought. Doubtless the heavy advance on some articles will curtail orders. Smaller and more frequent orders in these lines probably will be the rule and the jobber whose stock is kept reasonably full will get more of the business that has heretofore gone direct to manufacturers.

The new and attractive patterns in table or pocket cutlery which American makers are putting on the market are eliciting most favorable comment and the trade for the holidays can be depended upon for a great increase over preceding years. This also applies to skates, sleighs and other season goods that sell so largely at this season.

The cool weather that arrived promptly on schedule time this Fall has stimulated trade in oil and gas heaters. The famous "Beauty" heater which has such a hold on the trade in this section is going like the proverbial "hot cakes," the quality of the article being the magnet although the price is not especially low in comparison with some that are oil heaters if not room heaters.

The coming meeting of the National Hardware Association at Pittsburgh, November 15th to 17th is an event that every jobber looks forward to with much interest. The prosperity that all have been enjoying will especially pre-empt everyone who attends for a keen interest in the proceedings of the convention and for whatever entertainment

as well that may be provided. We must all get our desks cleared in time to participate in this most important event.

ALBANY HARDWARE & IRON CO.

THE PORTLAND TRADE.

Business continues good, September being rather a surprise, the sales being larger than was generally anticipated. All conditions are favorable for a very large Fall trade. Prices are firmly maintained.

It seems to be very hard to get orders filled where stocks have become broken, manufacturers still being behind and slow in filling new orders. It has been mistrusted by some jobbers that the manufacturers were taking care of new orders better than old contracts. Our own experience has been that the manufacturers have done everything in their power to get their old contracts out of the way.

Collections have been good, and the trade are feeling they should receive a fair compensation for their year's business.

We have not yet noticed any disposition on the part of builders to hold off, although we have no doubt the present high prices will cause some investors to delay building operations. The lumbermen seem to be of the opinion that prices in their line will be much lower when the Spring opens, and we think the impression by that time will be firmly established that the prices ruling for steel and iron products will be maintained for some time. We argue from this that high prices will not interfere much with next year's building operations.

THE EMERY-WATERHOUSE CO.

THE BOSTON TRADE.

Not many months ago the question was being repeatedly asked "When will prices reach bottom?" Prices were daily being reduced, stocks were constantly suffering depression and goods which were offered by the manufacturers which seemed marvelously low even when the cost of raw material and labor was considered.

Now conditions have been reversed and it is daily asked, "When will these advances cease?" Every mail brings some notification of an upward change, hardly a day passes without some intimation of a consolidation or an agreement among manufacturers to advance schedule of prices. Some look at these conditions seriously and wonder at what point the large advances in values which have been made during the past six months will interfere and put a check upon consumption.

At the present time when the demand is so far in excess of the supply and when we learn of the immense orders for steel and iron that are being placed for delivery in 1900 and the encouraging reports from every factory town throughout New England, we need have no fear that there is any immediate danger of a sudden collapse in values.

Although stocks have been large in the jobber's hands they are beginning to feel the immense drain made upon them and it cannot be said that their present condition is larger than the average at this season of the year.

Certain lines of goods it is almost impossible to get and manufacturers give little encouragement for prompt shipment.

Seasonable goods are selling far in advance of last year.

Prices are being well maintained and there seems little disposition on either the part of the manufacturer, jobber or retailer to cut prices.

FRYE, PHIPPS & CO.

THE BALTIMORE TRADE.

In the language of the Mayor of New York, "This might fittingly be called the 'Dewey Age,'" and to the peerless man whose grand achievements have enabled him to climb the ladder of fame and cast a benevolent gaze upon the struggling host of followers who would emulate his example, be it said the name of Dewey will stand emblazoned on the roll of heroes for all time. The children of the thirtieth century will know him, historically, as well as we;

but to us is granted the privilege of seeing and talking to him in life. Coincident with the close of a war, remarkable in shaping the destinies of two great nations, comes an era of prosperity to this country, likewise so many large consolidations of capital and industrial trusts as to elicit the opinion from trade centers that this is also a prolific age of Trusts.

As these organizations embrace the idea or policy of expansion, which is the key note of prosperity, when conditions are ripe, and as they are launched at a time when we have every facility for production and transportation known to modern science, with broad commercial avenues leading to all foreign ports, and a strong protective tariff wall along the coast, they should enjoy a sublime existence, and if not philanthropic, be at least a little moderate in their demands upon the local jobbing trade.

That the present market in Hardware is dazzling no one will question, and unless a buyer stands close to the inside of the many insides he may have to do some tall guessing on his own account in placing orders to cover actual requirements for the next six or eight months.

The speculative fever is abating, due perhaps to the change of temperature occasioned by the scythe advance and the prospect of trace chains and carriage bolts not going beyond list.

Notwithstanding the awful prices we have to charge our customers for goods, orders are still pouring in and we have not as yet gotten out of the rush.

Collections remain good.

H. W. WEBB & SONS.

THE PITTSBURG TRADE.

Fall weather arrived early this season and has given trade an early start in seasonable goods. Gas stoves are much used in this section and they are having a great sale. Snow to the depth of four inches fell in Northern part of this State last week, and early orders for sleds and skates are making their appearance.

Building is quite active, but there is no doubt that many new buildings are being held back on account of the high price of lumber, structural steel, etc. Many buildings that were intended to be finished and occupied by this time are still in their first story, waiting for steel beams.

The gun and ammunition trade is good, and as the shooting season approaches hurry orders are frequent.

Cutlery sales are better than for several years; this shows the effect of better times, as cutlery is considered in the nature of a luxury.

The fact that \$60,000,000 in wages is distributed annually in Pittsburgh, and that wage earners usually spend their money freely, makes trade good hereabout when our manufacturers are busy.

All manufacturing concerns are fully employed with orders for several months ahead.

LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

To a man just returned from the woods, after two months' absence from business life, the August and September advances seem imprudent. Everything that goes up without substantial base must come down, and it will require expert dodging to keep from under.

To those who went through the decline after the greenback expansion it is unpleasant to contemplate. Combinations may steady the decline and add duration to the torment, but they cannot prevent it.

If these extreme advances could have been avoided, we had the promise of several years of assured prosperity. It is dangerous to assume the role of a prophet in our scientific age, but it is comparatively safe to conclude that one extreme will follow another. When the reaction will come is the question. It is more than probable that 1900 will bring a cooling breeze and delay the friction of excitement

long enough for a careful view of the situation. If not, a national bankrupt law will be useful for the lambs.

In the meantime trade is booming. Country merchants are buying freely for present and future wants, but they are not all paying as promptly as usual. A spirit of speculation appearing may endanger business, but reaction will likely prevent its becoming contagious.

A waiting attitude will be safest for careful business men, selling as much as they buy until the change comes.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE SAGINAW TRADE.

Business is good, and iron and steel are bringing the market price, and it is impossible to get some shapes of iron and steel for immediate delivery.

The weather is fine, and all the lumbermen are preparing to go into the woods heavier than ever before. There is a stiff demand for pine and hard wood lumber.

MORLEY BROTHERS.

THE COLUMBUS TRADE.

It is the same story again this week. Trade continues good and manufacturers on seasonable goods are very slow in filling orders. A great many articles that are worn out in the hands of consumers would be replaced with new ones if they could be had; but after the stove is set up on an old stove board, it will no doubt stay "set" all winter. You know the average man don't hanker after the job of setting up a stove, especially putting the pipe together. Stove boards are one of the many articles that are hard to get. The weather has been fine for the past two weeks but rain is needed badly. Dewey has not been to Columbus yet and we will have to wait until we get a few good rains before the *Olympia* could float in the Scioto river.

THE SMITH BROS. HARDWARE CO

THE INDIANAPOLIS TRADE.

We were fortunate in preparing early for a much greater demand in Fall and Winter seasonable goods than we had ever enjoyed.

With the exception of one item our customers have received their axes, lanterns, coal hods, stove boards, elbows, sheet iron and air tight wood heaters with reasonable promptness, and were ready for the good demand they had for these goods, the latter part of September which was quite cool in this locality.

Although it may turn warm, as it is at present, all con-

nected with the Hardware business enjoy having early a premonition, in the shape of frosty nights, what may be expected later.

In several lines we have received and filled orders promptly from buyers, who have not favored us with business heretofore, who evidently could not secure the goods elsewhere. They tell us that it will result in their continuing to draw on us for their needs, consequently we are in good humor and feel repaid for the efforts put forth earlier in the year when we insisted upon prompt shipments of goods contracted for late last year and at the beginning of the present year.

VAN CAMP HARDWARE & IRON CO.

THE DAVENPORT TRADE.

Work is progressing rapidly on the Davenport, Clinton and Eastern Railway, the new road that is being constructed on the Iowa side of the Mississippi river, between here and Clinton, passing through Gilbert, Valley City, Le Claire, Princeton and Comanche; it is believed that trains will be running the entire distance before the new year.

The way that manufacturers are filling orders is decidedly annoying, from the fact that the irregular sizes, lengths, weights and numbers are filled promptly, while the regular sizes are marked "balance will follow," and there is always "more to follow" than is forwarded, and although one may have a large stock of any particular line of goods, it is difficult filling orders from such an assortment.

Trade continues good and there are very many more telephone, telegraph and "rush" mail orders than usual. There are less claims for overcharges than when goods were cheapest, fewer orders marked "If you cannot fill at once and completely please cancel;" less claims for shortages and defective goods, not so many calls from traveling salesmen and more frequent visits from customers. Collections are satisfactory.

We take pleasure in calling attention to a personal item. Mr. Robert Sickels of Sickels & Nutting Co., New York and President of Sickels, Preston & Nutting Co., Davenport, is visiting us for the first time in several years, shaking hands with his many warm friends in his old home where he resided for a quarter of a century or more.

SICKELS, PRESTON & NUTTING CO.

THE CHICAGO TRADE.

Since our last communication there has been no radical change in the prices of goods and the demand for all ar-

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. Hardware Dealers.

Stanley's Low-Angle Block Planes.

Block Planes are used for planing across the ends of boards, or of blocks, and in fitting close joints. The pitch of the Plane Iron is less than in ordinary Bench Planes, and the Iron is used with the bevel uppermost at the cutting edge.

60. Low-Angle Block Plane, 6 in. Length, 1 1/4 in. Cutter...\$1 50

65. Low-Angle Block Plane, 7 in. Length, 1 3/4 in. Cutter... 1 75

ticles in the Hardware line has kept up at a still stronger rate than we experienced earlier in the Fall season.

From the immense crowds of people visiting Chicago at the present time, because of the Fall Festival, we are anticipating sales for the month of October larger than any other single month this year. People from all sections of the country are flocking into the city at an unheard-of rate. The hotels and boarding houses are full to overflowing, and among the vast numbers are many Hardware purchasers from the surrounding country.

It is impossible for us to clean up our shipments every evening as promptly as we would wish, both from the large amount of business we are having and also from our inability to secure some kinds of Fall goods as fast as we can get orders for them. By putting on an extra force of help, however, we expect to catch up with our orders.

Our salesmen invariably are increasing their sales in comparison with the same period last Fall.

Crops have turned out finely in the West; the price of beefy cattle is higher than it has been for fifteen years, and from all of these advantages we are looking forward very hopefully to a very large trade during the balance of this year.

WELLS & NELLEGAR CO.

THE MINNEAPOLIS TRADE.

Good weather, good business, good collections and very favorable conditions as a whole. With the exception of nails, prices, we think, are fairly well maintained. There are peculiar reasons why it is difficult for us to get full prices on nails. It is beyond our control. The only thing we can do is to take each case as it comes up and handle it as best we can, hoping the party who is the disturbing element will eventually use his nails up and not make so great a difference in prices as he does at the present time. There is still considerable difficulty in getting certain lines of goods, and we believe there will be more trouble.

We are having our usual bright Fall weather, which is being taken advantage of by the farmers as well as con-

tractors and builders. Can see no reason why we should not have good trade up to the first of the year.

W. K. MORISON & CO.

THE ST. PAUL TRADE.

The crisp Fall weather which we are now experiencing seems to have a beneficial effect on trade. It is more than a hint to the country dealer that he is needing *cold weather* goods if he expects to be prepared to supply the wants of his customers, and consequently there is an active movement in such goods as are seasonable for Fall and Winter use. We certainly have no fault to find with the business of the last thirty days, as it has been larger than we expected. We find that the advanced prices are well maintained both by the jobber and retailer, and, as far as we know, consumers are finding no fault with the prices they have to pay, as the dollars are plentier in their pockets, or if not, they are easier to get than they were a year ago, and the balance remaining with them is larger than it was when ruinously low prices prevailed.

This statement about covers the present situation as we see it.

C. W. HACKETT HARDWARE CO.

A New Insulating Material.

Iron felt is the name given a new insulating material made in Germany and used extensively in Europe for numerous purposes. It is quite successful in preventing vibrations and is used for this purpose between engines and their foundations, also between rails and their sleepers. It consists of the larger and stouter woolen fibres treated first with by-product of petroleum and then coated with gelatine and India rubber and vulcanized. After pressure it is used in the form of plates somewhat over two square feet in area, and from one-half to two inches in thickness. The plates are said to be extremely elastic and imperishable, and have a surface so hard as not to be cut by the sharp edges of bolt heads or iron girders.—*Tradesman.*

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

Commercial Africa in 1899.

"Commercial Africa in 1899," is the title of a publication just prepared by the Treasury Bureau of Statistics.

It shows present commercial conditions in Africa, and incidentally the political divisions as they now exist, and is accompanied by a map showing the boundary lines of the various colonies, protectorates, spheres of influence and independent States of this great continent whose map has so rapidly changed during the past few years. A table accompanying the monograph shows the imports and exports into and from each of the divisions. The imports amount in round numbers to \$400,000,000, and the exports to \$350,000,000, while of the imports, \$18,000,000 is furnished by the United States, and of the exports, \$10,000,000 is sent to the United States.

Of course the large proportion of the commercial business of Africa is transacted through the British colonies, their share being \$131,000,000 of the imports and \$132,000,000 of the exports. Next in importance in the import and export trade is the South African Republic, or Transvaal, which is attracting so much attention at the present moment, its imports amounting to \$104,000,000, and its exports \$54,000,000, the chief exports being gold and other minerals. French Africa imports goods valued at over \$70,000,000 and exports nearly an equal quantity. Turkish Africa, principally Egypt, imports \$54,000,000 and exports \$62,000,000, while Portuguese Africa, whose ports on the eastern coast are adjacent to the gold and diamond fields, is also the scene of commercial activity, the importations being \$12,000,000, and the exportations nearly \$7,000,000.

Much additional information has recently been brought to the surface regarding Africa through the opportunities which are now offered for access to the interior. Physically the African continent is in many respects unique. Five thousand miles in extreme length, and over four thousand in breadth, its area is greater than that of any other continent except Asia, the latest estimates being 11,874,000 square miles. Its coast formation is peculiar in the absence of deep indentations, bays or harbors, and the small number of waterways which offer entrance to the interior. The fact that the greater part of the interior is an elevated table land extending on all sides to within a short distance of the coast renders access to the interior by the few large streams difficult. At the point where the rivers pass from the elevated plateau of the interior to the lowlands of the coast the falls or rapids which there exist prevent navigation, and as a result travel to the interior of Africa by water developed more slowly than in any other continent. Indeed it was not until the explorations of Livingstone, Stanley, Speke and others developed the true conditions and made known the fact that vast navigable water-stretches were to be found in the interior that it occurred to man to transport steam vessels around those falls

and put them afloat in the water-ways of the interior. When those conditions were clearly established, however, modern ingenuity and energy soon found a means of transporting steamers in small pieces upon the backs of men through the forests, around the falls and rapids for scores and even hundreds of miles, and putting them together, set afloat the steamers which penetrate thousands of miles into the interior and develop facts never before known and which could not have been developed by land exploration in tropical climates and jungles for many generations.

Curio Factories.

A well-known curio expert states that there are factories in Europe for the manufacture of all kinds of works of art that are likely to attract the collector. Modern articles of china are stamped with old marks so cleverly that even experts have been deceived. Arms and armor are treated with acids which eat away the metal, thus producing the same effect as the ravages of time. Carved ivories are stained with oils to make them yellow, and are subjected to heat to make them crack. Pieces of furniture have holes drilled to represent the worm holes, and so on, until in time there will be very little in the way of curios which are in themselves really curious. Paris is one of the strongholds of this class of forgers, while in Hungary there is a factory where Dresden china is imitated in a fair manner. There is, however, one safe way, and that is to buy through reputable dealers. Forgeries in all works of art very rarely get into the dealers' hands. As a rule they are sent to auction rooms.

Many amateurs have an idea that they may pick up a priceless work of art or curio for a mere song. That is the chance for the forgers. They know all this and work accordingly, and thus the amateur is deceived. The spurious curio makers haunt out-of-the-way auction rooms, where amateurs look in with the idea that nobody but themselves can know of the room in question. The sale takes place, and they come away with a gem, so they think, and are perfectly happy until undeceived. There has, curiously enough, in this connection, lately been discovered a disease which eats away bronze and gives it a sign of antiquity. All objects of antiquity fabricated from metallic copper and its important alloy, made by adding tin in certain proportions, are liable to be attacked by this destructive corroding affection. Skilled artists of these false antiquities are known to inoculate their reproductions with spots of bronze disease.—*Pottery Gazette*.

The Corundum Industry.

While the corundum industry of India dates back to the earliest times, the abundant deposits of this mineral in the Eastern United States have only been worked during the last twenty years. Corundum deposits are known to occur all along the southern slopes of the Appalachian chain from New York State to Alabama, but it is extracted in a large scale only in Georgia and North Carolina. In 1878 it was found in North Carolina, and since that time its output has steadily increased. Corundum wheels are rapidly replacing files for grinding down metal surfaces and are taking the place of grindstones for sharpening tools. It costs about 60 cents to file down a pound weight of iron with an ordinary file, while a corundum wheel can do the same amount of work at one-seventh of the cost and in one-eighth of the time.—*Tradesman*.

A method of writing with aluminum on glass has been patented in Germany. The glass is moistened with vinegar, and the drawing or writing done with an aluminum point, fine particles of the metal adhering to the glass, which, when dry, shows the markings in silvery lines that cannot easily be removed by friction.

The Invention of Lamps.

The invention of lamps is ascribed to the Egyptians. In the British Museum are two colored glazed tiles which were fixed in the center of the ceiling; each has a large knob pierced through the base to receive a cord for suspending a lamp; around the base of each is an inscription stating that it formed part of the decoration of the Temple of Kammuri at Calah Nimrod in the time of Assuru-Abla, 885 B. C. What the lamps were made of cannot now be ascertained, but there is plenty of contemporaneous glass which has been discovered in the neighborhood. The sacred lamps in Greek temples, whose undying flames were perpetually watched by vestas, were probably of metal, and the wick formed of asbestos. In the public baths at Pompeii two lamps were used, each to light two rooms. These lamps were protected by circular convex glasses, fragments of which were found on the spot. The marvelous accounts by mediæval authors of perpetual burning lamps found in ancient tombs seem too numerous and well tested to be altogether fabulous. When the tomb of Pallas, son of Evanda, who is mentioned by Virgil, was discovered about the twelfth century by a countryman digging near Rome, it is said a lighted lamp was still burning over his head, which must have been lighted more than 2000 years, and might be called eternal. Baptista Porta, in his treatise on natural magic, relates that about 1550 a marble sepulchre of the Roman period was discovered in an island near Naples, and on opening the tomb was found a phial containing a burning lamp. This lamp became extinct on breaking the phial and exposing the flame to the open air. It was supposed that this lamp had been concealed before the Christian era, and those who saw it reported that the lamp emitted a splendid flame. In 1550 a remarkable lamp was found near Atestes, Padua, by a rustic digging, who unearthed a terra-cotta urn containing

another urn, in which was a lamp placed between two cylindrical vessels, each of which was full of a very pure liquid, by whose virtue the lamp had been kept shining upward of 1500 years. This curious lamp was not meant to scare away evil spirits from a tomb, but was an attempt to perpetuate the profound knowledge of Maximus Olybius, who effected this wonder by his extraordinary skill in chemical art. St. Augustine says a lamp was found in the temple of Venus, exposed always to the open weather, and which could never be extinguished. Ludovicus Fives mentions another lamp, which was found a little before his time, that had continued burning 1050 years.—*Ironmongery.*

It is said that not less than \$20,000,000 is spent at Atlantic City in the course of a single year.—*Exchange.*

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Augusta, Ga.—The Maurice Walton Hardware Co. has been incorporated by Maurice Walton, and John Moore; to conduct general Hardware business. Capital stock, \$30,000.

Bessemer, Mich.—Selin & Goodman, Hardware, etc., have opened new store corner of Sophie and Sellar Streets.

Concord, N. C.—The York and Wadsworth Hardware Co. has been incorporated; capital, \$50,000. Stockholders: John C. Wadsworth, N. F. York, C. J. Harris, R. O. S. Miller and H. W. Miller.

Dover, Del.—The Newman & Capron Hardware Co. has been incorporated by Gardner W. Kimball, Frederick W. Hunter, and Charles H. Trimble; Hardware and merchandise.

Franklin, Tenn.—Britt Bros.

Guthrie, Ky.—Leon Hamill and Watkins Northington, will open a Hardware and grocery store.

Houghton, Mich.—W. R. Daskin & Co., Hardware, new firm, will commence business.

Montreal, Can.—Grap, Copping & Co., Hardware dealers, new firm, commenced business.

Seattle, Wash.—The Merz Dairy Co. has been incorporated by F. J. Merz, E. A. McDonald; deal in all kinds of dairy tools. Capital stock, \$6000.

Seattle, Wash.—The Strong & Johnson Co. has been incorporated by H. C. Strong, F. C. Johnson; Hardware. Capital stock, \$10,000.

Sioux City, Ia.—The Baker Hardware Co. have filed articles of incorporation. It has a capital stock of \$100,000. A. C. Baker, J. I. Baker, and R. M. Baker are the incorporators.

St. Louis, Mo.—The A. F. Geschwinder Stove & Hardware Co. Capital stock, \$2000. Incorporators: Henry and L. F. Shember, Lizzie Geschwinder and others.

Changes and Improvements.

Amery, Wis.—Wood & Staffenson succeed Dahlstul & Staffenson.

Benton Harbor, Mich.—H. A. Hill buys the remaining stock of McGuigan & McDonald.

Bismarck, N. D.—Grambs Bros. succeed W. D. Brunssman.

Bradner, Ohio.—A Hyter has taken possession of the stock of Hardware and building he has purchased of J. A. Carr.

Caneadea, N. Y.—Charles Lucas succeeds B. D. White.

Canton, Ill.—J. C. Webb has purchased the Hardware stock of James Donn.

Carlinville, Ill.—E. C. Barbour, secretary and treasurer of the Woodward Hardware Co. has sold his extensive interests to Charles T. Woodward and will engage in business in Oklahoma.

Carthage, Mo.—A. M. Drake has taken

into partnership his son Charles F. Drake. The new style is A. M. Drake & Son.

Charlevoix, Mich.—John Baker, Hardware and agricultural implements, store purchased by Caldwell & Loudon.

Chrisman, Ill.—J. W. Graham succeeds L. A. Wilkins.

Dickey, N. D.—C. E. Johns & Co. succeed Johns & Paton.

Dundee, Minn.—R. O. Morrison succeeds Ernest F. Fricke.

Elkhorn, Wis.—Chas. Freligh succeeds C. B. Williams.

Greene, Ia.—C. O. Miller succeeds A. N. Bonwell.

Grinnell, Ia.—I. S. Bailey has bought out the interest of Mr. J. C. Goodrich in the Hardware company of Bailey & Goodrich. Mr. Goodrich will continue with Mr. Bailey until January next.

Hartford, Wis.—Neu, Enders & Goetz succeed Neu & Davy.

Humboldt, Neb.—George Harral has disposed of a half interest in his Hardware store to Wesley Lyons.

Hutchinson, Kan.—J. H. Shanahan buys interest of H. Devier in Geo. McKinstry & Co.

Jackson Centre, Ohio.—R. D. Earl has moved his Hardware store from Port Jefferson into the Cargill room, west of the post office.

Kent, O.—The Kent Hardware Co. succeed A. C. Smith.

Macedonia, Ia.—Lane & Son succeed Lane & McGready.

Mankato, Minn.—Charles J. Macbeth has purchased Charles Harris' interest in the Hardware firm of Benack & Harris.

Menominee, Mich.—The Northern Hardware & Supply Co., new block is now being erected.

Middle Grove, Mo.—L. O. Thompson succeeds Greene & Victor.

Milwaukee, Wis.—E. H. Williams has disposed of his Hardware business.

New Haven, Conn.—H. D. Clark & Co., for many years engaged in the buying and selling of building materials, Hardware and builders' tools, are to retire from the business, having sold out to a new firm to be known as the Warner-Miller Co. The new company has a capital stock of \$30,000.

Northampton, Mass.—J. H. & W. H. Riley are planning to move their stove and Hardware business to their old location in Court Street.

Oswego, N. Y.—John Dorsey is selling out his Hardware stock.

Petersburg, Tenn.—W. L. Scott & Newsum Stallings buy the stock of Marsh & Hart.

Plum City, Wis.—Aug. Schweder succeeds J. J. Schulthess & Co.

Port Huron, Mich.—J. B. Sperry has greatly improved his Hardware store by fitting up the second story and building a broad flight of stairs leading to it.

Prairie du Chien, Wis.—L. Case & Co. dissolve partnership, L. Case continuing.

Red Lake Falls, Minn.—O'Brien Bros.

have moved their stock of Hardware into the large brick store room next to the Paradise block.

Red Cliff, Ia.—The Red Cliff Mercantile Co. succeed J. W. Pearce & Son.

Redwood, N. Y.—Mr. Kelley has sold his stock of Hardware to E. J. White.

Rock Island, Ill.—Robert G. Summers, doing a stove, tin and Hardware business at No. 322 Twentieth Street, has sold a half interest to Norman C. Woodin, and the new firm, under style of Summers & Woodin, will continue to conduct their business at the old stand. They will from time to time add to their large and well selected stock of stoves and tinware, a line of shelf Hardware.

Spring Valley, Ill.—Fehr & Cummings have bought the Duggan stock.

Temple, Tex.—T. L. Hollingsworth and the Temple Hardware Co. have consolidated.

Twining, Mich.—Entrekin & Fox, Hardware, have closed out stock at this place and removed to Clare.

Washington, Ia.—John N. Lewis succeeds C. G. Raguet.

Wausau, Wis.—A Weichman & Son, have purchased a building on Washington Street. A large addition will be erected to the same and improvements made and the same used for their Hardware business.

Business Embarrassments.

Attica, Ind.—McCurdy & Son, Hardware and stove dealers have made an assignment to H. J. Green. Assets, \$2000; liabilities, \$1500.

Fort Wayne, Ind.—A receiver has been appointed for R. Steger & Co., Hardware dealers. The business has been established over ten years.

St. Louis, Mo.—G. Meyer & Co., Hardware dealers, Nos. 601-607 Manchester Avenue, have filed a petition in bankruptcy.

Fires in Hardware Stores.

Farnham, N. Y.—Schwert's Hardware store has been destroyed by fire.

Greenville, Tex.—F. E. Alexander.

La Grange, Ill.—John Blaser.

Memphis, Tenn.—Rogers Bros., dealers in implements, establishment destroyed by fire.

Monticello, Ia.—Eastwood & Chase, small loss.

Reading, Mich.—Hartwell & Doig.

Serena, Ill.—Albert Halliday.

Burglaries in Hardware Stores.

Boonville, N. Y.—Palmer Bros., revolvers. Columbus, O.—W. R. Calkins & Bros., revolvers.

Deer Creek, Ill.—Phillips Bros., cutlery. Flint, Mich.—Foote & Church, razors.

Minden, Neb.—Nichol & Pattison, \$25. Murray Hill, N. Y.—Miss Metzger, small loss.

Rising Sun, Ind.—Gibson & Sons, cutlery. Rosenberg, Tex.—The Catron Hardware & Furniture Co., store burglarized, and a few articles stolen.

Milwaukee, Wis.—The Milwaukee Stove & Foundry Co., which is to operate a factory in the Kinnickinnic valley, at the foot of Hanover Street, has been incorporated with a capital of \$25,000. The new foundry will give employment to fifty men at once.

Newark, N. J.—The Oscar Barnett Foundry Co. has been incorporated by Gerald Hannay, Albert D. Barnett, and Oscar Barnett, Jr.; manufacture wooden and metal articles. Capital stock, \$50,000.

New Castle, Pa.—The Vulcan Foundry & Machine Co. has been incorporated by J. S. Kaufman, S. D. Strasburger, H. K. Siebeneck, and W. Kaufman; manufacturing iron and steel. Capital stock, \$75,000.

Philadelphia, Pa.—The Pennsylvania Furnace Co. has been incorporated by S. H. Stern, C. E. Rushmore, H. Dickson, W. Frost, and J. McY. Mullen; manufacturing iron and steel. Capital stock, \$30,000.

Piqua, O.—The Piqua Handle & Mfg. Co.; manufacturing and selling handles. Capital, \$200,000. Incorporators: W. E. Barber, W. C. Rogers, W. Hetherington, Kittie W. Leonard, F. Chance, all of Piqua, Ohio.

Portland, Me.—The Rice Gear Co. has been organized for the purpose of manufacturing tools and gear machinery of all kinds, with \$250,000 capital stock, of which \$300 is paid in. The officers are: President,

C. D. Rice, of Hartford, Conn.; treasurer, A. R. Day, of Hartford, Conn.

Portland, Ore.—The Summer Fallow Machine Co. which has been incorporated with a capital stock of \$3000, divided into shares of \$30 each, propose to engage in the manufacture of a weeder recently patented by M. J. Anderson. It is a contrivance intended to clear summer fallow of weeds and other troublesome growths. It is known as the Anderson Weed Destroyer and the machines are giving excellent satisfaction. The principal place of business is Dufur. The company has erected a building and secured machinery with which to manufacture several thousand of the machines annually.

Providence, R. I.—The Thomas Phillips Co. has been incorporated by G. R. Phillips, G. C. Phillips, and L. M. Cook; manufacturing and dealing in machinery, plumbers' and gas fitters' supplies. Capital stock, \$200,000.

St. Louis, Mo.—The Climax Nut Lock Co. has been incorporated by W. Dickerson, W. E. Leeds, J. R. Arrendale and J. McElroy; manufacturing nut locks, nuts and bolts. Capital stock, \$50,000.

Changes and Improvements.

Allentown, Pa.—The Empire Steel Co. have purchased the Macungie Furnace from Mrs. Audenreid, of Philadelphia, and will start the plant after an idleness of 10 years.

Benwood, W. Va.—The Riverside Iron & Tube Works, which were recently absorbed by the National Tube Co., will be enlarged, the additions contemplated to cost more than \$1,000,000.

Huntersville, N. C.—Richmond & Caldwell have erected a two-story addition to their wagon and agricultural implement factory.

Kansas City, Mo.—The Kansas City Roofing & Corrugating Co. have moved into their new quarters, Nos. 218 and 220 West Third Street, where they will have the benefit of a switch, a much needed addition to their business, which has been increasing so rapidly that it became an absolute necessity. Their capacity will now be over three times as much as formerly.

Lorain, Ohio.—The brick walls of the American Shovel Works are ready for the roof. It will be but one story in height, but covers a large area of ground. The heavy machinery for cutting and stamping is largely in place and there will be little delay in getting to work as soon as the building is completed.

Louisville, Ky.—Ninety feet of ground on the south side of Main Street, east of Fifteenth has been sold by the Avery Plow Co. to the National Machinery & Foundry Co., whose plant was recently destroyed by fire. The purchase price was \$15,000, and the property adjoins the site of the foundry company's old plant.

New Haven, Conn.—The property of the American Fish Hook Co. has been sold to E. F. Pfeuger, of Akron, Ohio. The price paid is not disclosed. This company was

organized in 1864, and is one of the few concerns manufacturing this product in this country. The new buyer will operate the New Haven plant for some months, but ultimately he will transfer operations to Akron.

Philadelphia, Pa.—The American Iron & Steel Mfg. Co. have filed notice in the State Department of an increase in its capitalization of from \$1000 to \$20,000,000. The company comprises the steel plant of J. H. Sternbergh & Sons, and the National Bolt & Nut Works, both of Reading, Pa.; and the Pennsylvania Bolt & Nut Works, of Lebanon, Pa.

Sharon, Pa.—The Aschman Steel Casting Co.'s works, including the Graff Stone Co.'s property, has been sold to the American Malleable Casting Co., of Cleveland. The Sharon works will be enlarged to double the capacity, and over 300 hands will be employed. The product of the Sharon works is to be used by the Cleveland concern.

Taunton, Mass.—The Nelson & French Rivet Co. will erect a brick factory, 100x36 feet. It will be twelve feet in the clear in the lower story and ten feet in the clear in the second story. It will be strongly built, well lighted and equipped with the best of machinery for the work which is to be done.

Walden, N. Y.—Work has been commenced on a large addition to the works of the New York Knife Co.

Recent Fires.

Branford, Conn.—The knob department of the Branford Lock Works, owned by the Yale & Towne Mfg. Co., has been destroyed by fire, causing a loss of \$5000; insured.

Chicago, Ill.—The saw factory at Nos. 336-38 Carroll Avenue, belonging to C. A. Hiles & Co., has been almost completely destroyed by fire.

Lockport, N. Y.—The brass and iron bedstead factory of Oliver Bros. was destroyed by fire. Loss, \$250,000.

Portland, Me.—The Hayes Tool Co., damaged by fire at a loss of \$250.

Shelby, Ohio.—Fire at the Shelby Tube Works destroyed the rolling mill, piercing machine room, and engine and boiler rooms. Eight hundred men were thrown out of work. The plant was valued at \$500,000.

Recent Embarrassments.

Fleetwood, Pa.—Louis Schaeffer, William S. Merkel and John S. Bertolette, trading as Schaeffer, Merkel & Co., manufacturers of farming implements have made an assignment of all their property to George B. Schaeffer, and A. K. Seaman. The real estate is estimated at \$40,000, and the personal property at \$30,000. The liabilities are \$60,000.

Miscellaneous.

New Britain, Conn.—The New Britain Hardware Mfg. Co. has filed a certificate of the reduction of its capital stock from \$6000 to \$600.

Ottawa, Ill.—The Peru Plow & Wheel Co. have elected directors. It was voted to increase the capital stock to \$75,000.

Pawling, N. Y.—Fire has destroyed Joseph Cutler's bicycle store.

Pekin, Ill.—F. H. Albertson, bicycle dealer, destroyed by fire; insured for \$500.

THE WORLD'S GREATEST FILE WORKS.

ESTABLISHED 1842.

"By their works ye
shall know them."

PLANT OF THE ARCADE
FILE WORKS AT
ANDERSON, IND., U. S. A.

BACK of an Arcade File stands the most complete and modern file manufacturing establishment in the world, directed by master minds, originators of a distinctly improved product, sold entirely on its merits, the modern plant insuring best quality. Back of an Arcade File stands this guarantee, "that an Arcade File will cut faster and wear longer than any other file made," and as an "earnest" of this guarantee, the Arcade File Works will send to any responsible Hardware Jobber, Wholesaler or Retailer, one dozen Arcade Files, to become the property of the receiver or returned at our expense if the guarantee is not fully borne out in every particular.

There are new points worth knowing about Files, and the best information is condensed into a neat little pocket volume which we will send free to readers of "Hardware" while they last. Ask for "Practical Talks on File Work," and perhaps you would like to know about prices.

CARY'S PATENT
HINGE
 AND
HASP

Designed Especially for
 Fruit Crates, Milk,
 Egg, Cracker and
 other styles of
 Boxes, requiring a
 hinged cover.

CARY MFG. CO.,

19-21 Roosevelt St.,
 NEW YORK.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

SQUARE STYLE.

NEW ERA RADIATORS

Used on **STOVE** or **FURNACE PIPES** save the **HEAT** that usually goes up the chimney. They are simple in construction, handsome in appearance and powerful heaters. One or more of these great fuel savers should be in every house.

NOW IS THE TIME TO PUSH THEM . . . WRITE FOR PRICES.

The Brownfield Buyer's System

Is a practical, economical and efficient method of preserving Catalogues, Price-Lists, Samples, and printed or written memoranda relative to your subjects of purchase or business in a convenient and accessible form for quick reference. It will interest you. Full particulars for the asking. Write to

THE FOLDING PAPER BOX CO., South Bend, Ind.

"ONE OF THE FEW PAPERS WE READ."

Tabb & Jenkins Hardware Co., Baltimore, Md. [*Hardware, Cutlery, Guns, Ammunition, etc.*] We have always considered **HARDWARE** as a valuable acquisition to trade literature, and it is one of the few papers which we read through from cover to cover. It is valuable in calling the buyer's attention to new goods on the market, and we should think to the manufacturers, it would be a good medium of introduction. W. L. Fairall.

"VERY USEFUL FOR REFERENCE."

Joseph Breck & Sons, Boston, Mass. [*General Hardware, etc.*] It gives us pleasure to speak a good word for **HARDWARE**. We find it very useful as a medium for reference in regard to current prices, also for the information contained regarding goods. Hoping that you will meet with success in editing this valuable journal, I remain,
J. F. Breck, Secretary.

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

- A, 200 pages, - - \$1.00
- A 2, 400 pages, - - \$1.50
- A F, 200 pages with flap, 1.25
- A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

- B, 200 pages, - - \$1.00
- B 2, 400 pages, - - \$1.50
- B F, 200 pages with flap, 1.25
- B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 7 1/4 inches.*

FOUR EDITIONS:

- C, 200 pages, - - \$1.00
- C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50
- C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 1/4 x 8 inches.*

FOUR EDITIONS:

- D, 200 pages, - - \$2.00
- D F, 200 pages with flap, - 2.50
- D 2, 400 pages, - - 3.00
- D F 2, 400 pages with flap, 3.50

Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**
" Parers, Apple " **PA**

For Chisels, turn to **CH**
" Cutlery, " **CUT**

For Iron, turn to **IRO**
" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

A D G U SCJ
A N HAW SCR
A U HAN SCY
A W HAT SE
A X HI SH2

Fac Simile of Indexing.

Price Book E—350 pages, 7 x 10 inches, canvas tab indexing. Price, \$5.00.

Price Book F.

A D DIE MF SI
A N DIP MO SK
A U DO NAI SL
A W DR2 N5 SN
A X DRI NU SO

Fac Simile of Indexing.

556 pages, 8 1/4 x 11 inches, black leather tab indexing with gilt lettering. Price, \$7.50.

Note.—In Price Books E and F there is an Index Character to EVERY PAGE.

"Bright & Newsy."

Biddle Hardware Co., Philadelphia, Pa. [General Hardware and Bicycles]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

McKINNEY MFG. CO., - Allegheny, Pa.**JOHN H. GRAHAM & CO., Selling Agents, (P. O. Box 1042), 113 Chambers St., NEW YORK.****GREAT SANITARY STOVES. ALUMINUM OIL HEATERS.***Read what WILLARD H. MORSE, M.D., F. B. S. Sc., has to say about them:*

—OVER—
200,000 of these **HEATERS**
NOW IN USE.

And nothing but words of praise
in testimony of their excellence.

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates: durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

ALL
THE NEWS.

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its twentieth volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

NEW YORK.

PRICE \$1.00 PER YEAR FOR 24 ISSUES.

HARDWARE

Sir Thomas, we salute you! More "sail on" your yacht failed to win, but the same cannot be said about your tea. It's the Ceylon that makes it popular.

E. W. Morley, of Morley Bros., Saginaw, Mich., paid us a call recently while on East for a couple of weeks. He looked the embodiment of good health, and feels confident that business this year will bubble over with profit.

In consequence of the unprecedented wholesale business done by the Sickels, Preston & Nutting Co., Davenport, Iowa, this year, it was decided on October 13th to close the retail department of the store and devote their entire attention to the jobbing business. We congratulate the company on this evidence of unbounded prosperity, which places them in a straight line with the exclusive jobbing business done by their companion house in New York, the Sickels & Nutting Co. May they both "live long and prosper."

A lady when asked to furnished a "take off" on the most pleasing subject enjoyed by man, made a very successful effort by simply removing her Gainsborough hat.

J. M. Litchfield has recently opened a handsome and well appointed salesroom at No. 105 Beekman Street, corner of Pearl, New York, which will be in the interest as well of the Taylor & Boggis Foundry Co., Cleveland, Ohio, for the purpose of properly displaying a general line of stoves for oil, gasoline, gas and coal, and similar Hardware specialties. In connection with these, Mr. Litchfield will make his headquarters here for his well-known Game Oil and Filter Faucets; and he hopes that all of his customers, and those interested in the goods above mentioned will favor him by calling when in the city, the use of his office being gladly extended to them.

Sir Thomas was worried about not having lead enough on board for the last day of the races, but before the day was over he was led more than he wanted to be.

The Magnolia Metal Co., Nos. 266 and 267 West Street, New York, announce the fact that they have recently completed arrangements whereby the Q. & C. Co., of Chicago and New York, become their exclusive agents for the Railroad trade for Magnolia Metal. Their territory will cover the United States, Mexico and Canada. They also announce that the Metal Sales Co., No. 15 South Water Street, Cleveland, Ohio, have been appointed sales agents for Ohio, Indiana and Michigan. With these important connections, it is very evident that the large sales already recorded for Magnolia Metal will be very advantageously increased.

Yachtsmen say that jibing is caused by "shifting the boom." If the boom on iron and steel products now on should suddenly shift, some old pessimist would be ready to jibe with his "didn't I tell you so."

Joe Limeburner says: At the successful missionary gathering held under the auspices of the Rev. Mr. Simpson recently, from the way watches, coats, vests, etc., came flying up to the gatherers, one would have thought it was under the patronage of "Our Uncle Simpson."

Why does the present style of ladies' skirts remind the railroad commuter of a small way station? Because to get anywhere around the city the fair ones are compelled to "flag the train."

After booming "the glorious climate of California" for so many years that all over the world it has become a synonym for perfect health conditions, it is now proposed to quarantine it against consumptives—the one particular class to whom its existence has been an anchor of hope. The prime movers in this business must be of the Universalist denomination and destitute of a certain fear.

The entertainment committee having in charge the entertaining of visitors and members at the annual convention of the National Hardware Association to take place next month, are already working hard to achieve the success they have ample reason for anticipating.

As the convention bids fair to be the largest yet held by the Association, every effort will be made to have the proceedings interestingly diversified by such features of an entertaining kind that are within the scope of the committee's opportunities. The entertainment committee is composed of W. C. Reitz, chairman, representing the Bindley Hardware Co.; A. J. Bihler, of the James C. Lindsay Hardware Co.; John D. Cherry, of Wolff, Lane & Co.; R. M. Repp, of Logan-Gregg Hardware Co., and Herman Lautner, of Lautner Hardware Co.

It is whispered on Chambers Street that the two yachts during racing week made so many tacks the market is glutted; and the jobbers are jibing the manufacturers, or the latter are jibing the jibers, it's hard to say which.

Frederick N. Stanley was recently elected President of the Stanley Rule & Level Co., New Britain, Conn., and No. 107 Chambers Street, New York, filling the vacancy caused by the death of Charles L. Mead. At the same time Henry S. Walter was elected Treasurer, and Charles B. Stanley, formerly Assistant Superintendent, was elected Superintendent.

The late Mr. Mead filled the combined offices of president and treasurer, and the promotion of F. N. Stanley to the position followed naturally from many years of faithful devotion to the interests of the company, he having entered its employ immediately upon the close of the War, working both in New York and New Britain. Shortly after connecting himself with the company he was made the Assistant Secretary, and since 1879 he has held the position of Secretary. While his place of residence will continue in New Britain, his duties will make his presence in this city one of frequent occurrence. Mr. Walter, the new Treasurer, has been the efficient Superintendent of the factory for a number of years.

Let us hope when the loving cup is bestowed upon that dead game sport, Sir Thomas, that the time will never arise when he cannot "lift it" and drain it to his heart's content. It's singular how something Strong furnished the first contribution.

It is the constant use of the advertising columns that wins. The public may forget to-day what was advertised yesterday; but to-day's advertising is before them. To advertise at the right moment is to advertise continuously.

HARDWARE

VOL. XX.

OCTOBER 25, 1899.

NO. 2.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the
HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

E. N. ROOT,	-	-	Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

There are but little if any signs of a let up in the general business. The jobbers are reporting an activity that has been a continuous performance ever since the season commenced. The retailers in every section report an increased demand, with steady sales; less difficulty in disposing of regular stock, and a gradual expansion of present stocks, not alone by increased quantities for immediate requirements, but by the addition of other specialties being added to meet the increasing enquiries for the latest and most improved articles for any especial purpose, backed up by the ability to pay for the same on the part of the prosperous consumer.

The trade generally are recovering from the fear which was confessed by a small portion of the buyers that the state of affairs which made so many periodical advances in prices prominent almost daily, could not possibly be of long duration. They are going now to the other extreme, and actually figuring on the possibilities of their Spring wants for 1900. The confident tone thus given to the business encourages the manufacturer, who is likewise emboldened to order a stock of material for future use, or enter orders for the same in such a way that will secure him against radical advances, which seem to be predicated on the tone of the market, and the constant upward trend which new quotations on almost every line makes evident.

The antagonistic feeling possessed by some of the trade against combines and trusts, is gradually weakening, and is not heard so generally as was the case last Spring. The prospect, now so apparent, of a year of profitable business has mollified the feeling formerly so natural against the controlling influences dominated by trust methods; and as prices have been so well sustained, with advances sufficiently gradual so that all buyers need not be "left at the post" when making purchases, the trade feels as though the conditions surrounding the industry at the present were never before of so confident a tone, or less likely to be subverted by any unlooked for slump.

The high prices of many grades of material entering into building specifications have had an effect in temporarily suspending some enterprises already in contemplation. This will soon give way under a pressure from tenants made certain under improved conditions of occupancy; and we may look forward to even a greater degree of activity in building circles next year, with a prospect for a more permanent demand for

such improved investment than the present year has so far encouraged. Builders' Hardware already advanced in price to a sufficiently profitable ratio based on present cost of material, will be held more closely to current discounts than was possible during this year when stock orders were in process of being made a *sine qua non* requirement of prompt shipments.

It should be remembered when predicting the prices of the future that many discount sheets are in a present healthy state for the government of 1900 transactions, unless in addition to the sustaining of present costs of material, factory labor should also demand some of the plums in the pudding by seeking shorter hours or higher wages; it having for the present year been placated by the prospect of a continuous employment that in past seasons has been an unknown quantity.

Export trade continues active, particularly in the way of labor-saving machinery, the products from which may at a later date become noted for an active competition on profit-bearing specialties, which will compel attention.

Some Possible Reforms.

Before 1900 is well under way it will doubtless be found that several reform movements will be agreed upon in the Hardware trade, largely affecting the interests of the Jobber, and which will be made possible only by their present close and harmonious organizations.

Goods on which the margin of profit is light, and competition heavy, will doubtless be sold on terms of strictly "net cash, 30 days." It is considered doubtful if these terms can be made general in a stock so slow to move and difficult to realize on as general Hardware.

Then again it is probable that a return to charging for packages and cartage will be attempted, as the humanitarian efforts that resulted in the adoption of this work being done gratuitously, have been regarded as a "sop to Cerberus" only when trade was slack, and which simply diminished profits and created discontent without appreciative recognition by any except the large buyer from the interior jobber, the smaller purchaser being the principal beneficiary.

Indefinite terms of warranty on certain classes of goods, now being disposed of under this greatly abused handicap, will be made more definite as to time and terms. Money in any event should never be refunded on tools that have been in the possession of the user or abuser, over ten days or even a less period. If the quality of the tool or other article is of a character to make it returnable under a guarantee, the condemning weakness is usually discernible at once, and the tool should be exchanged for another without uncalled-for delay in the transaction.

It is a better time to adopt new rules governing the business relations between the dealer and the consumer, or between the jobber and the retail dealer, when the demand for goods is greater than the supply in a regular way; so that captious customers can be discriminated against, and crankism eliminated from ordinary everyday transactions. When trade is dull, concession after concession is made, either voluntarily to engender business or compulsorily to placate a kicking customer, until a mental black list is necessarily established, the reformation of which can only be accomplished during

the prosperously rushing seasons of traffic which have been the prominent features of this year's trade.

The Selling of Sewing Machines.

An article forming the third of the series so far given in our columns having reference to the sale of sewing machines by the Hardware trade will be found in our present issue.

It is written by one of the managing partners of a leading and progressive jobbing house in the West, who, having achieved perfect success in the handling of sewing machines, is fully conversant with the many advantages to the trade afforded by that special line, and earnestly desires to see others profit by his own experience.

Should this enlightened movement be adopted and the sewing machine of the future find its natural market through the substantial houses now prominent in the Hardware industry, it will prove of commendable benefit to all concerned. It will introduce to the consideration of our intelligent compeers a new line in touch with the inner household requirements of every community, which would pave the way for the introduction of other important specialties being pushed through the efforts of the retail houses, handling this product under the judicious generalship of the jobber.

In doing this the confidence between the retail dealer and the consumer would become more intimate and greatly strengthened, resulting in a more extended business being done through the breaking down of the barriers of ultra conservatism that have formed too characteristic a feature in previous methods of distribution.

Some Reasons for Poverty.

In a speech delivered by Judge Robt. Powell, at Vicksburg, on the Poverty of the South, he is quoted assaying:

"The reason of our poverty is not hard to find. Take our average citizen. He gets up in the morning and pulls on a pair of socks from Lynn, Mass., puts on a pair of shoes from Boston, a suit of clothes from Philadelphia; goes into his breakfast, draws up a chair made in Chicago, and eats from a table which came from Cincinnati; sweetens his coffee from Rio with sugar from Louisiana, takes a slice of ham cured in St. Louis, and butters a biscuit of Minnesota flour with oleomargarine which came from the Lord knows where; he eats South Carolina or Louisiana rice, and even the very grits upon his table were ground in some Northern mill; he goes to his stable and puts a set of harness from St. Louis on a mule from Kentucky; hitches it to a wagon from Illinois, and drives over to his neighbors and complains of hard times. Of course, times are hard when everything people eat, drink, wear and drive came from somewhere else, and only the atmosphere which he breathes is a home institution."

Wire Fences in South Africa.

During 1897 South Africa imported no less than 7000 tons of wire fencing, chiefly from the United States, the iron posts for which were mostly furnished by other countries. The iron post is I-shaped, of wrought iron, and cast into a triangular Y-shaped foot-piece, tapering to a sharp point at the end which is driven into the ground. The wires pass through holes in the post and are not fastened to each one as in the United States, but every twentieth post is a heavy one, some being cast and made of old railroad rails. These are called "tightening-posts," and here the "slack" is taken up by long eyebolts with two nuts. The gates are all of wrought iron, hung on heavy posts.—*Ironmongery.*

Bicycles are Not Baggage.

From the passenger department of the New York Central Railroad a wide distribution of the following is undertaken:

"Bicycles are not baggage, so declare the three judges of the St. Louis Circuit Court of Appeals. The baggage-man of a Missouri Pacific train refused to receive a bicycle in his car. The owner brought suit for mandamus to compel the company to carry his vehicle under the same provisions as those for ordinary baggage, and was successful in the Circuit Court. The company appealed and its practice has been sustained. The decision says:

"Ordinary baggage is made up of two elements. (1) Certain things which may become such. (2) The bags, trunks, valises, satchels, packages and other receptacles in which these things are to be put before they can be deemed baggage. In other words, the bag of receptacles and their contents are both necessary components of the idea conveyed by the term baggage. Was the plaintiff's bicycle a thing comprehended within the definition of personal property or ordinary baggage? It had no utility during the trip. It is claimed, however, that it was convenient and useful at the end of the trip. Conceding this to be true, cannot the same be said, and with equal truth, of every other form of vehicle or carriage which the traveler might own? From their nature, structure and classification, bicycles belong to those things which are properly the subject of freight contracts, and are not embraced in the class of things denoted by the words personal or ordinary baggage. The defendant had the absolute right to refuse to accept the bicycle tendered as personal baggage, irrespective of any question as to its right to be so classed, on the ground that it was not deliverable to him as such until it had been properly packed, crated or otherwise protected from the perils of handling or transportation."

Merchant & Co. at National Export Exposition.

Merchant & Co., Inc., of Philadelphia, New York, Brooklyn and Chicago, extend a cordial invitation to everyone interested in their line of goods to pay a visit to their exhibit at the National Export Exposition now on at Philadelphia, "Section D-6, Main Building." This company will have representatives there at all times who will be glad to see all visitors and give them information about the goods they have to offer.

The exhibit itself is a novel one, consisting of a handsome booth, covered with their well-known Merchant's Spanish Tiles, and having two "Star" ventilators, one of the "Standard" form and the other of the glass top "Skylight" form. Above this roof there is an apparatus which distributes water in the shape of rain, so that the visitor has a practical example of the value of good roofing as a protection against the weather.

Within the booth is a full line of the product of their smelting works, consisting of the largest line of Babbitt metals produced in America, as well as every description of solder and newspaper metals, also a full sample line of Merchant's high grade roofing and bright tinplates, metal ceiling; also brass tubing, which they handle in very large quantities.

This exhibit will be of marked interest to everyone, and is well worth a visit by those interested in the best bright or terne tin, in ventilators, and in the general line of roofing material, also to the numerous manufacturers and users of machinery who require brass and copper goods, and Babbitt metals.

The Peckham Motor, Truck & Car Co., of Kingston, N.Y., recently made a big shipment of car wheels to England, intended for the Sheffield Electric Tramway Co. It is gratifying to know the bulk of the contract for material and equipment for the road is being purchased in America.

The Busy Manufacturers.

The manufacturers, in the opinion of the Chief of the Bureau of Statistics, are about the busiest people in the United States at the present time. Mr. Austin, the Chief of the Bureau, has just returned from a visit to the manufacturing centres of New England and the Middle States, and if their condition is an example of that of the manufacturers of the country generally, as it presumably is, there can be no occasion for complaint that mills and men are lacking employment. Mr. Austin visited the cotton, woolen, worsted, silk, fibre, carpet, print goods, rubber, boot and shoe, hat, pottery, and watch and clock manufacturing establishments and in no case did he find a lack of orders for the manufacturers or of employment for men and women desiring employment. On the contrary the great cotton, woolen, silk and other textile mills are running on full time and over-time, while the manufacturers of rubber goods, boots and shoes, clothing and pottery reported their orders far in excess of their capacity to fill with promptness. "Our chief difficulty," said the manager of a great manufactory of rubber clothing, "is to get a sufficient number of employees and sufficient machinery to meet our orders. The crude rubber we can get, though the importations of that are increasing rapidly and the price advancing because of the increased demand; but the costly machinery and the skilled labor which are to do the work are not so easily had. We maintain constantly a school for the instruction of young men and women in the lines of work required in our factory, and yet with the constant reduction of our force by the demands made upon it from other mills of this character, we are short of hands and unable to keep up with our orders."

Similar statements were made by the managers of other manufacturing establishments. The cotton mills, woolen mills, and silk manufacturing establishments were running at their full capacity, and in some cases over hours, while the great boot and shoe manufacturing establishments were reported weeks behind with their orders, which come from all parts of the United States and of the world. During the last eight months, between two and three million dollars' worth of boots and shoes, the product of American factories, have been sent out of the country, the total for the eight months being double that of the corresponding months of 1898. Of this large exportation of this single product of our factories the exports to the United Kingdom alone were \$477,734, against \$263,175 in the corresponding months of last year; to the West Indies, \$467,519, against \$167,420 in the corresponding months of last year; to British Australasia, \$392,439, against \$208,783 in the corresponding months of last year; to Mexico, \$206,880, against \$66,816 in the corresponding months of last year; to Africa, \$94,605, against \$54,653 in the corresponding months of last year, while shipments were also made to Asia, Oceanica, Central and South America, as well as to the great industrial and manufacturing countries of France, Germany, and the United Kingdom.

An illustration of the activity of the manufacturers in other lines is found in a statement made by Dr. Wilson, the head of the Philadelphia Commercial Museums, and also the director of the Export Exposition; "Our chief difficulty in the preliminary work of the exposition," said he, "was in the fact that the manufacturers of the country were so busy that many of them could not find time and the necessary force of employees with which to prepare exhibits satisfactory to themselves, while in many other cases our requests for exhibits were met with the statement that since they are now months behind with their orders, the display of their products would merely add to their temporary embarrassment by bringing them a still greater excess of orders over their capacity for production. In the great iron and steel manufacturing industry we found that many of the establishments had from six months' to eighteen

months' orders ahead and that they were working to their fullest capacity and unable to increase their product without an increase in machinery, which, of course, cannot be made in a moment."

In the iron and steel industry the figures of our exports show that the extreme activity of manufacturers extends not alone to the home market, but to that supplied by other parts of the world. The exportation of manufactures of iron and steel in the eight months ending with August, 1899, amount to \$68,008,071, against \$52,925,082 in the corresponding months of 1898; \$40,757,920, in the corresponding months of 1897, and \$29,957,090 in the corresponding months of 1896. A still further evidence which our foreign commerce figures show of the activity of our manufacturers is found in the rapid increase in the importation of materials used by manufacturers. The importations of fibres for use in the manufacturing industries in the eight months ending with August, 1899, amounted to \$14,377,758, against \$11,989,146 in the corresponding months of 1898, and \$9,851,516 in the corresponding months of 1897; hides and skins, \$32,606,820, against \$27,748,084 in the corresponding months of 1898, and \$22,637,286 in the corresponding months of 1897; India rubber, \$22,860,318, against \$17,418,404 in the eight months of 1898, and \$13,100,645 in the corresponding months of 1897, and raw silk for use in manufacturing, \$23,452,903, against \$16,639,211 in the corresponding months of 1898, and \$13,416,156 in the corresponding months of 1897.

Catalogue of C. Sidney Shepard & Co.

C. Sidney Shepard & Co., proprietors of the Buffalo Stamping Works, Buffalo, N. Y., with branches in New York, Chicago, St. Louis, Kansas City, Denver and Seattle, are distributing a very complete catalogue of their line of goods, covering everything in the way of tinware specialties and housefurnishing goods generally. It is an exceedingly useful catalogue for the use of the trade. Included in its contents are many of the notable household specialties with which this house has been identified for many years, such as steam egg poachers, cereal cookers, Perfection tins, Shaker flour sifters, Wonder egg beaters and cream whips, Self-Sealing pie tins, Clean-Cut cake tins, Gilmore graters, Security kettles, Buffalo mincing knives, Regal roasting pans, Simplex roasters, Combination dippers and Perfection measuring cups. These household specialties wherever they have been introduced, have proved to be exceedingly popular. Other specialties of theirs, such as Nestable strainer pails, galvanized wash tubs, Savory roasting pans and Perfect one-piece stove-pipe elbows are also illustrated in a graphic manner. Within the pages of the catalogue is shown a line of Aluminum ware, extremely extensive, and the usual assortment of stamped ware, galvanized ware and japanned ware found in a catalogue of this description.

This house is well known as the manufacturers of dairy supplies in the shape of milk cans of several well-known desirable patterns, creamery pails, covers, gauges, etc. They also manufacture Shepard's Lightning Freezers, which are also well represented, Shepard's Jumbo Lightning, together with the lines represented under the names of Gem, Blizzard, Crown and the "Improved Philadelphia Seaman," designed for hand and power. Included in this catalogue is a large number of pages devoted to supplies of every description, suitable for the tinner, and handled by jobbers throughout the country. The catalogue is well bound, consists of 240 pages 8x11 inches in size, and is accompanied by an appendix of sixteen pages, which includes new goods that have been added to the line since the issue of this catalogue.

A successful exhibition of the works of Rodin, the famous French sculptor, has just closed in Brussels.—*Ex.*

NEW ENGLAND HARDWARE DEALERS' ASSN.

The regular monthly meeting of this association was held at the United States Hotel, Boston, on the evening of October 11th. A good representation of members was present, drawn, no doubt, by the fact that the program promised to be and was a most interesting one.

Among the guests and speakers of the evening were Messrs. G. E. and H. L. Russell, of Holyoke, Mass., president and secretary respectively of the Hardware Social Club, of Springfield; and Prof. W. P. Cohoe, of Harvard University. The speeches of these gentlemen were most interesting, and were accorded the strictest attention. The musical part of the entertainment was furnished by Miss D. Emily Lucey, Miss Helena Jacobs and Robt. L. Von Buskirk, whose performance, as in the past, was *par excellence*, and evoked much applause. The interest in the musical attainments of this trio, while more than justifiable by virtue of their merit, is much heightened by the fact that all three are closely identified with the Hardware trade; and they are regarded as special *protéges* of the Association.

The customary banquet was served at 5:15 P.M., and followed an informal reception in the parlors of the hotel. At the conclusion of the dinner the minutes were read and approved, and the president formally welcomed the guests; and referred to the Springfield association as a model of excellence in keeping together the trade of that vicinity. He then introduced G. E. Russell, president of that club.

Mr. Russell expressed the pleasure it gave him to visit the Association and spoke briefly of the benefits received from their own club, which embraced the towns of Springfield, Holyoke, Westfield, East Hampton and Chicopee. Prior to the forming of the club a state of cut prices and ill-feeling was in possession of the field, but after coming together everyone found that his competitor was not such a bad fellow after all. They had a pricing committee consisting of the president, vice-president, secretary and three members, who adjusted all questions of price; and their decisions were accepted by all members.

President Parlin announced that President Russell applied for the admission of the Springfield Club as local members of the Association, with power to send delegates; and called attention to the fact that a change in the by-laws would be necessary to effect this. Mr. Janvrin thereupon gave notice of his intention to move for the necessary change; and read a resolution to that effect, enabling local associations to become members, with power to send one delegate for every ten members. This will be acted upon at the next meeting.

H. L. Russell, secretary of the Springfield Club was the next speaker. He opened his remarks by stating that his president was more or less of a *Shamrock*, as he had taken the wind out of the speaker's sails. The Springfield Club was not rich in speech-makers. They had one named Bryan (laughter) who, however, was all right.

Referring to the name of the club, he said it should be properly known simply as the H. S. Club. This might mean anything from Ham Sandwich up; but the reason for the ambiguity was that in its inception the members did not desire the public generally to know of its formation; as it was feared ill-feeling might result. Now, however, they did not care who knew it. He looked for many benefits from association with the Boston organization; among others, the possibility of thus bringing the North-

ampton trade into harmony with other towns already in the Association.

A laughable error had occurred in the announcements of this meeting as sent out by Secretary Farless. The subject which Prof. Cohoe had chosen was "The Function of the Chemist in the Manufacture of Iron." In setting this up the printer had made it "The Junction of the Chemist." Secretary Farless explained how he had called up the printer and told him to take out the "J" and make it "F." The printer obeyed in part. He took out the "J" and put nothing in its place; making it read "Uunction," and the invitations were sent out accordingly.

Prof. Cohoe in beginning his address said he was glad he had made a junction with the Hardware Association; but that it was not his function to speak with unction on the matter.

His lecture, which was illustrated by many interesting experiments with iron and its combinations, was followed with the deepest interest. The following is a synopsis of his remarks:

The aim of the chemist has always been largely utilitarian. True, a large number of chemists are to-day working at problems which in themselves are purely theoretical. Still these problems, although in themselves purely theoretical, have often a very practical bearing, few indeed being confined entirely to the realm of theory.

Let us go back before there was any science of chemistry. Chemistry had its origin in the practice of alchemy. As such it originated in the dark ages. The name itself really means the black art, and the practice of alchemy was looked upon with very doubtful but somewhat longing eyes by the good respectable people of those days. Even then, however, the problem of those crude workers aimed at the practical. * * *

Now alchemy was not chemistry, but chemistry grew out of it. The substances which were used in the practice of alchemy came to be known in a definite way and their properties studied, and in the last part of the eighteenth century the science of pure chemistry had its birth. Its progress until to-day has been a steady one. To-day we are dependent upon it on every hand.

The truth of this last statement will be more forcibly seen when I have shown in a brief way—for time does not permit but a very brief outline of the whole—what part the chemist plays in the history of an iron or steel product. Before there is a mine he is there. He examines the ore after it is mined, analyzes the pig after the furnace has done its work, and in large manufacturing establishments examines the finished products in company with the mechanical engineer.

Good iron was manufactured before such an article as a chemist existed. The chemist has obtained his knowledge in a reverse order in many cases, but to-day he has his knowledge fairly well in hand. Notice I do not say perfectly. The true scientist is modest. The function of the chemist in the iron industry then is two-fold. It is first to apply this knowledge so that the best product shall be obtained, and second to improve on present methods where possible.

What we call iron is not iron. It is a mixture of other elements with iron. The business of the chemist is to control this mixture, producing that which is best suited for the purpose intended. Probably none of you have ever seen pure iron. It is prepared chemically. Piano wire is 99.7 per cent. pure, the other 0.3 per cent. being carbon. Native iron occurs most frequently in the form of meteorites.

Now what are the principal forms in which we know iron?

One form is pig iron, or cast iron. It is very impure, containing principally carbon, phosphorus, sulphur and silicon. When cooled suddenly the carbon remains in chemical combination with the iron, and we have white

cast iron; when cooled slowly the carbon settles out as graphite and we have gray cast iron.

When the carbon, silicon and phosphorus are removed the iron becomes tough and malleable and its melting point is raised. Then we have wrought iron. Wrought iron generally contains less than 0.6 per cent. of carbon and melts at from 1900 to 2100 degrees.

Now what is steel? To-day we have so many kinds of steel that it is very hard to say just what steel is. Here is a definition, however. In its specific sense steel is a compound of iron, possessing or capable of possessing decided hardness, simultaneously with a valuable degree of toughness when hot or when cold, or both. It includes primarily compounds of iron combined with, say, 0.30 to 2 per cent. of carbon, which can be rendered decidedly soft and tough, or intensely hard, by slow and rapid cooling respectively, and secondarily compounds of iron with chromium, tungsten, manganese, titanium, nickel and other elements, compounds which, like carbon steel, possess intense hardness with decided toughness.

The heartiest applause followed Prof. Cohoe's remarks; and a unanimous vote of thanks was immediately accorded him.

The entertainment committee for the November meeting was appointed, as well as one for Ladies Night, which it was decided to hold in December. The application of Herbert C. Allen, of Baldwin & Robbins, for membership was acted upon favorably and the meeting adjourned.

Bissell's Christmas Announcement.

The Bissell Carpet Sweeper Co., with their usual spirit of progressiveness, will issue on November 1st their Christmas offer to the trade, which promises to be a very attractive one, and one in keeping with their usual policy. The principal features of their coming Christmas announcement will consist of new and striking electrotypes for newspaper advertising, show cards, new Christmas booklet, nicely illustrated, talking up their goods, and urging their desirability as Christmas gifts, and, in fact, valuable advertising helps to the trade to push the sale of their goods. Extra high polishes and finishes will be used on the woods for the Christmas sweepers, to say nothing of the nicety of mechanical construction that will be embodied in them.

The Bissell Co. intend producing next month one of the handsomest booklets and most attractive show cards they have ever yet issued.

From the present outlook the Bissell Co. say the coming Fall and holiday trade will prove to be the largest in the history of their business.

Putty for Parquet Floors.

In a reply to a question on the subject, the *Painters' Magazine* offers the following: "The receipt for putty referred to is a thorough mixture of paper, preferably blotting paper, which has been soaked in boiling hot water until pulp is formed, which is then mixed with glue, also dissolved in water. To this bolted whiting is added in sufficient quantity to make a fairly stiff putty by kneading the mass, which is pressed into the cracks and smoothed off with the spatula or putty knife. However, this putty is recommended for large cracks only, because unshrinkable, but is scarcely adapted for shallow cracks in a parquet floor. For this purpose we would recommend one part white lead in oil, mixed with two or three parts of bolted whiting and enough coach varnish to make a stiff paste. If the work must be hastened, coach Japan may be substituted for part of the coach varnish. The putty will resist moisture, and when dry and hard may be sandpapered or rubbed, and it may be tinted with color, if required to match the color of the wood.

The largest corporation in the world is in Pittsburgh, (the Carnegie Steel Co.) capital stock, \$250,000,000. Next comes the Federal Steel Co., of New Jersey, authorized capital \$200,000,000.—*Ev.*

The Ambler Asbestos Air Cell Covering.

Where pipes are used for the conduction of steam heat, water or heated air, considerable loss results from the radiation of the heat. This causes not only decreased efficiency of service, but increases the cost of the fuel.

To overcome and prevent this loss of heat, and thereby reduce the amount of fuel required, a covering known as the "Ambler Asbestos Air-Cell Covering" is manufactured by the Ambler Asbestos Air-Cell Covering Co., of Ambler, Pa., with New York office at No. 26 Cortlandt Street.

This covering, as is shown in Fig. 1, combines in its construction the well-known non-conducting qualities of the "Air-Cell" structure, and the fire-proof characteristics of asbestos. The covering is composed of divided air cells, each independent of the other, produced by arranging in alternate layers sheets of plain and corrugated asbestos paper, wound into cylinders of proper interior diameter to fit all standard sizes of pipe. These cylinders are split longitudinally, so that they can be easily slipped on the pipes. They are provided with an exterior canvas covering, and with metal fastening bands.

This covering is neat, light and easily applied, as well as non-conducting; it is fireproof (a feature that should receive consideration); will not harbor vermin, and will not

decay or deteriorate with age. The covering is strongly and compactly made, and, owing to its peculiar construction, will not crack or powder from vibration of the pipes, or hard usage. It may be removed and reapplied an indefinite number of times without loss or deterioration.

As indicated in Fig. 2, the covering is also made in blocks, slabs and other special forms, suitable for non-conducting jackets for boilers, steam drums, smoke flues, breechings, hot-air ducts, etc., and when so used is superior to ordinary cement, not only as a non-conductor, but as less likely to induce rust.

As shown in Fig. 3, this covering is particularly adapted for covering hot-air pipes of the ordinary house furnace. It is well known to every householder who has a furnace in the cellar, that the cellar is the warmest room in the house, particularly on a cold day. By having the heater pipes covered with a good insulator, which at the same time must be absolutely fire-proof, the heat is confined to the pipes, and must escape through the radiators into the rooms where it is needed. This result can be accomplished with the Ambler Asbestos Air-Cell Covering for furnace pipes.

Owing to its sectional construction, it is most easy to apply, requiring no skilled labor, while its first cost is very low.

Circulars and samples may be had without charge by addressing the company.

SEWING MACHINES AND THE HARDWARE TRADE.--III

The possibility of the successful handling of sewing machines by the Hardware trade has been fully and ably discussed in these columns in previous issues, so that I can add nothing but a little personal experience to emphasize the facts. I am of the opinion, however, that the experimental stage has been passed, and that in five years' time the greater part of the sewing machines that are used will be distributed through the Hardware trade, and will be as staple as some other lines to which ten years ago both jobbers and retailers were strangers.

Take washing machines as an illustration. I am speaking now only of our locality, but in 1884 the retail dealers who handled them were few and far between, and no jobber had ever thought of carrying them in stock. Our first shipment was twenty-five machines, the goods were on consignment, and sale and satisfaction guaranteed, because we had great doubt as to our ability to dispose of them. All that time the country was full of washing machine peddlers who sold from wagons, and our salesmen would not touch them, neither would the retailers. We finally got a few of them out by inducing the dealer to take them subject to sale, and agreeing, if they came back, to pay the freight both ways and send our customer a box of cigars for his trouble. But we never bought any cigars, though our orders for washing machines increased. Two years after this the writer met a prominent jobber in a neighboring city who asked if we carried washing machines in stock and the answer was, of course, in the affirmative. He said: "The — Mfg. Co. wrote us that you sold 2500 last year and wanted us to put them in stock." On being told that the factory had not overstated the facts, he decided to put them in stock, and at present a washing machine wagon is a thing unheard of, and the goods are as staple as nails, saws or axes.

The sewing machine business will develop in the same way and the more of them that are handled the larger the trade. At one time we were the only jobbers of washing machines in this vicinity. Now they are handled by every jobber of Hardware, groceries and wooden ware, eight of them at least in this market, and our trade on them has increased every year. The lead, however, is with the Hardware trade and will probably remain so because they handle the better grades, and so maintain the advantage first gained. Sewing machines will follow the same course. To a beginner they are much alike, but with experience comes discrimination, and the dealer learns that the best is a trade builder and a winner, and buys the cheaper goods only for comparison and to increase the sale of the better grade. The competent salesman always sells the best goods, knowing that by so doing he increases his prestige, his profit and his future business, leaving to his less fortunate competitor the matter of price, which on account of his lack of experience, or ability, or both, is his principal talking point. The Hardware trade are handling more cheap machines now than they will in a few years, when their experience and knowledge of the business is wider.

A few words of our own experience will not be out of place. When we put them in, the salesmen, as a rule, did not enthuse over the new line, and had we depended entirely on the regular methods, it is possible that the results would not have been entirely satisfactory; but we took the matter up with every customer that the salesmen failed to interest, by personal correspondence, explaining the merits of the machine and the advantages they had in placing them in the hands of the consumer. The results were as

surprising as they were satisfactory. Of ten cars sold the first year, about 60 per cent. were credited to correspondence sales and the balance to the salesmen. This led them to appreciate the possibilities and to increase their efforts, and as a result our business on this line has far exceeded our expectations.

Still we are of the opinion that the ground has not yet been scratched, and that if the Hardware trade take hold of the line and *plow deep*, the harvest will yield returns far in excess of their highest expectations. Those now in the business will reap results from the efforts of those yet to begin, and if every Hardware dealer in the country carried the goods, there is enough for all and the trade now established could be enlarged; so that if this experience of ours results in any additions to the number of Hardware dealers, jobbers or retailers who are now handling sewing machines, they will certainly result to the advantage of the dealer as well as

A WESTERN JOBBER.

Whence Asbestos Comes.

Asbestos is a physical paradox, yet one of nature's most marvelous productions. It has been called a mineralogical vegetable; it is both fibrous and crystalline; elastic yet brittle; a floating stone, which can be readily carded, spun and woven into tissue. In Germany it is known as *steinflachs* (stone flax), and the miners of Quebec give it quite as expressive a name—*pierre coton* (cotton stone). The asbestos mines of Quebec are the most famous in the world, yielding 85 per cent. of the output, Italy being the only competing country, and there the industry is declining. Although Charlemagne is said to have had a tablecloth of asbestos, which he cleansed by throwing into the fire, it was practically unknown until 1850.

The Italian mineral was then experimented with, and some years later put on the market. In 1878 the first Canadian mine was opened and the product steadily increased until 1890, when 9,860 tons, worth \$1,260,000, were mined. There has since been a decline in value, the amount for 1896 being 12,200, worth only \$430,000. Asbestos is flexible, non-combustible and a non-conductor of heat and electricity, and on these properties its increasing use depends. It is spun into yarn, from which cloth is woven for drop curtains in theatres, clothing for firemen, acid workers, etc. It is made into lamp wicks and gloves for stokers and ropes for fire escapes. It is felted into millboard, to be used as an insulator in dynamos and as a fireproof lining for floors. It is used to insulate electric wires, and as a covering to prevent loss of heat from steam pipes. Mixed with rubber, it is used to pack steam valves.—*China, Glass and Lamps.*

Slate Trade in France.

Slate is used at Nice for window shelves and window tops, steps of indoor and outdoor staircases, kitchen trimming and finishing. The slate is brought there from Lavagna, on the Ligurian Riviera, and is a dark gray article of a remarkably inferior quality. Roofing slates from Angers, France, are coming into more general employment, although the large and heavy terra-cotta tiles have been in universal use. Slate tiles have been used lately upon several large villas. Roofing tiles from Angers, machine cut, cost \$10.04 per 1000; with side rounded, \$11.97 per 1000, delivered at Nice.

The pina cloth of the Philippines is made from the fibre of the pineapple leaf. The cloth is very expensive.—*Ex.*

Paris Expositions of the Past.*

The Paris Exposition of 1900 will be the brilliant climax of many similar exhibitions which have been held in the French Capitol during the past one hundred years.

First on the list of great industrial exhibitions with which the name of Paris is identified comes the exposition of 1798. This enterprise cost the modest sum of \$12,000, and represented only 110 exhibitors; but what the original acorn is to subsequent generations of forest oaks, the exposition of 1798 was to the subsequent industrial exhibitions in Paris. Twenty-five medals were distributed at the exposition of 1798. The buildings, which were of embellished wood, were on the Champs-de-Mars.

The second exposition took place three years later (1801) in the court of the Louvre. It represented 220 exhibitors, and quite eclipsed the first.

A third exposition, opened the following year at the same place, collected 550 exhibits. This was a veritable triumph. So marked was the success which attended each of these enterprises that Paris soon became famous for her expositions, and from 1802 to 1855 she held expositions at intervals of every few years. Each exposition marked phenomenal strides.

Napoleon I. inaugurated the fourth exposition, which was held on the Esplanade of the Invalides in 1806; there were 1422 exhibitors. This figure was carried to 1622 at the fifth exposition in 1819, in the Palace of the Louvre. The sixth (1823) met with little success, as also the seventh in 1827, in the reign of Charles X., in the Palace of the Louvre. As an offset, the eighth, opened on the Place du Carrousel in the reign of Louis Phillippe, and gathered 2487 exhibitors. This success was accentuated in the exposition in 1839, held on the Champs-Elysees (3381 exhibitors), and in that of 1844, also on the Champs-Elysees (3960 exhibitors). The exposition of 1849, again on the Champs-Elysees, cost \$300,000.

Until 1855 Paris made no special effort to secure the co-operation of other nations, but in that year she enlarged the area of her activities and held her first great international exposition. She expended at this time not less than \$2,300,000, and constructed the famous Palace of Industry.

In 1855, in addition to securing some 23,954 exhibitors, Paris attracted over 5,000,000 visitors. Other nations, enthused by this success, endeavored to emulate the example, and similar exhibitions were held within the next few years in London, Vienna, Brussels and other European cities. Our own Centennial Exposition at Philadelphia was largely inspired by the success of this great exposition of 1855. Then came the well-known expositions of 1867 (52,000 exhibitors), of 1878 (52,835 exhibitors and 16,000,000 visitors), and 1889 (55,486 exhibitors and 32,500,000 visitors).

At each of these she eclipsed her former records and created new high-water marks. With the prestige which she has acquired from past experience in holding such enterprises, together with the spur and rivalry which she has felt in observing what other countries have accomplished in this direction, she is well equipped for adding fresh laurels to those which she has already won, but whether or not she will surpass our great Chicago exposition of 1893 remains to be seen.

The Paris exposition of 1900 will attract thousands of interested visitors from this side of the Atlantic. The United States will also be represented by many excellent displays of her resources.

The exhibitors from the United States at the Paris Exposition of 1900 will be more than two thousand.

* By Captain A. H. Mattox, of the Bureau of Publicity, to the U. S. Commission.

The greatest copper and brass mill is in Waterbury, Conn.—*Ex.*

Death of William S. Fearing.

William Sedley Fearing, prominent in the metal business in this city, died on October 16th, at his home in Brooklyn, after a short illness. He was a member of an old Cape Cod family, and was born in Boston. His father, Andrew Coates Fearing, was a direct descendant of John Fearing, who landed at Hingham, Mass., in 1635. Mr. Fearing started in business in New York in the metal house of Brown Brothers. At the dissolution of that firm he went into business for himself, and recently has had an office at No. 256 Broadway. Mr. Fearing was at one time vice-president and director of the Archer & Pancoast Co., then the largest manufacturers of gas fixtures in the United States. In 1896 he was appointed receiver for the company and was engaged in winding up the affairs of the concern at the time of his death. He was a member of the Hardware Club, and the Lincoln Club in Brooklyn. He is survived by his wife, who was a Miss Sherman of New York, and one daughter.

Export Notes.

The Ames Plow Co., of Boston, will forward several warehouse trucks to Honolulu.

A good-sized lot of Quaker City shovels is about to be shipped to Vera Cruz, Mexico.

The Hall Trap Mfg. Co., of Abingdon, Ill., are shipping their automatic mouse traps to Germany.

The Syracuse Chilled Plow Co., of Syracuse intend making a shipment of sulkeys to Havre, France.

Collins & Co., of Hartford, Conn., recently exported two carloads of their cast steel specialties to Havana.

The Hoyt Metal Co., of Arlington, N. J., will shortly forward several cases of babbitt metal to London.

Willcox & Gibbs, of this city, have ready an important shipment of sewing machines destined to London.

The Garvin Machine Co., of this city, are continuing their heavy shipments of machine tools to their Berlin plant.

The National Bolt & Nut Co. will make a large shipment of bolts intended for the Cuban Electric Co., of Havana.

The Singer Sewing Machine Co., of this city, are now making large consignments of sewing machines to Mexico.

The Builders' Iron Foundry Co., of Providence will make a shipment of its specialties to Schuchardt & Schutte, of Vienna.

W. R. Ostrander & Co., of this city, have ready a shipment of speaking tubes and miscellaneous electric supplies for Yokohama.

The American Tool Works, of Cincinnati, will shortly make a shipment of machine tools to Antwerp, Belgium, and Bremen, Germany.

The Brown & Sharpe Mfg. Co., of Providence, recently exported some No. 23 plane milling machines, with oil pumps, intended for Paris.

The John A. Roebling Construction Co., of Trenton, N. J., are about to ship good quantities of trolley and steel wire to the Cuban Electric Co., of Havana.

The Enterprise Mfg. Co., of Philadelphia, recently exported some 200 cases containing No. 22 meat choppers to Paris, where it is stated they are extremely popular.

The American Tool Works, of Cincinnati, are shipping to their German representatives, several heavy cases of machine tools which will be exported to DeFries & Co., of Dusseldorf.

Death of George Tritch

George Tritch is dead. He died at his home in Denver, Colo., on October 8th, after suffering several months of wearing pain caused by a complication of liver troubles which began to rack his system over a year ago, and which forced him to give up an active participation in the management of his business and financial interests.

Born in Baden, Germany, April 23, 1829, he had but recently passed the Biblical age of three score and ten.

George Tritch belonged to that band of first settlers who faced every obstacle, all discouragements, many hardships, but never lost abiding faith in the future greatness of the city and the State. Their work was of the most courageous kind, but they never faltered.

Mr. Tritch lived to see a great city built upon the site of the little frontier hamlet where he cast his lot nearly forty years ago. In the upbuilding of that city he took a prominent part and contributed as much as any other one man in improvements and enterprises. He was prosperous to a marked degree, but it was a prosperity that came through close attention to business, careful investments and careful expenditures, through the employment of a business talent of high order. He has left his monument in a number of business blocks of the city, a large commercial establishment and in a family equipped by birth, education and training to carry on the enterprises which he so successfully launched. No man could have a better monument.

Mr. Tritch started in the Hardware business, made his fortune in that business and stuck to it to the end, making it the best of its sort in that part of the country. The greatest corporation institutes of the world are not run on sounder financial policies than is this business. He firmly believed that he had solved the question of finances and knew the years when values were at their lowest and their highest, and he conducted his business in conformity with these beliefs. When his chart told him the time of depression and low prices had reached its limit he began to fill up his warehouses with supplies, buying his Hardware in trainload lots and so figured it that his warehouses would be almost empty when the wave of depression again struck the country, and then he would buy in small quantities on a declining market.

He was shrewd, but he was more than that. He was intelligent, a scholar and had thoroughly mastered the study of finances which he had taken up. He probably was lucky in beginning his business career in a city like Denver, which grew so rapidly, but that was the only really lucky event in his life and men who had advantages equal to his failed, while he went on and on, because of his ability and capacity for work.

Although by business instinct and foresight he soon had his magnificent business interests in such condition that others could do the work he had always attended to personally, and that the great fortune would keep on increasing not only without his labor, but even without his brains, he never, until confined to his bed, which has been but a short time, gave up his active interest. He had a substantially furnished office in the Bank block, which he owned, adjoining his Hardware house on Arapahoe Street, to which he came regularly, and there, surrounded by relics and photographs of the days when the great Tritch fortune was in embryo, he would sit in his great office chair with his head slightly bowed, his hands clasped, with his forefingers buried in his strong chin, and look back over a successful life, and get his greatest pleasure in dreaming over again the history of that life, beginning in the Buckeye State, where he learned the tinner's trade, and culminating in Denver a prince of tinner's.

As the Hardware business flourished and the fortune of Mr. Tritch began to accumulate, judicious investments were made, and at the time of his death it is probable that his real estate holdings are more valuable than is his Hard-

ware business. He owned some of the most valuable warehouses, business house and residence property in the city, all of which are so located that their value is being increased with each day, and will without doubt be worth double their present value in a very few years. It is estimated that Mr. Tritch was worth in the neighborhood of \$2,000,000.

He married when he was 20 years old and the wife who survives him has been with him through the roughest and the smoothest roads and her life history is his. On March 24th, of this year the couple had been married fifty years. Mr. Tritch was then rapidly failing and with the happiness of having his large family about him of children and grandchildren and great-grandchildren there was a sadness which the knowledge of lurking death brings.

Though always prominent in public affairs, Mr. Tritch held municipal office only once. He was an alderman from 1863 to 1865. He was once nominated for the mayoralty, but was defeated. Originally he was a Democrat, but in later years he became in a sense an independent, voting for the men of his choice, regardless of their party affiliations.

That he was not only known but loved, was attested by the flowers which came from societies, individuals and employees. It seemed as though everybody who had known

GEORGE TRITCH.

the great merchant wanted to pay a last tribute to his memory with flowers, and there was bank upon bank of them.

While the lines upon which his success was reached were simple, he himself was a very unusual man. In his way he was a practical philosopher. He became a good deal more than a mere business man. While almost till the last he kept his vast and complicated business in the hollow of his hand, practical experience had greatly broadened his strong intellect. He was not only a safe adviser along business lines, but a man who looked into life in a broad way and extracted from it many hard-won lessons. A strong man up one side and down the other he was much more apt to provoke admiration than love; blunt and outspoken, he knew nothing of diplomatic subterfuges. He had learned in a hard school and may at times have harshly taught, but he leaves behind him a record of probity which none can assail and which all may emulate with profit.

A curious invention for the protection of bank checks consists of a number of disks, so that any combination of numbers may be formed. The characters are heated to branding temperature by means of electricity and, on being pressed to the surface of a check or similar paper, the amount named thereon is burned by a process which defies the usual methods resorted to by check raisers. Devices are provided so that the work can be done quickly.—*Tradesman.*

RELATION OF SALESMAN TO CREDIT MAN.*

Mr. President and Gentlemen: A tramp down in New York State stopped at a farm house and asked for something to eat; it was given him and he fell to with the appetite of a very hungry man. The lady of the house, who was pious, said to him: "It is customary in this house to ask a blessing before eating." The tramp promptly responded by saying: "Me and Chauncey Depew allus talks better after we've ett."

This rule certainly holds good here this evening, and, in so far as I fall short and prove the exception, I ask your kind indulgence.

A prominent business man said to me the other day: "What we need is less talking and more hustling." Credit men are not particularly noted for their talking qualities, but they are good listeners, and when hustling it is well for them to do so with some deliberation and a degree of caution. But we do honor to-night to the gentlemen of the road who are not only notoriously good talkers but also great hustlers.

The Kansas City Association of Credit Men has never evinced a desire for talk for talking's sake; it has always had some practical end in view. It has aimed to increase the efficiency and value of the individual credit man; to promote better business methods, and to bring about in the community a higher standard of business ethics, and I feel quite positive that, as a result of this evening's discussion, there will be better work in the office and better work on the road; less of suspicion and more of fair and liberal dealing as between employer and employee.

Every one acting a responsible part in the world continually works with and for others as well as for himself. This is nature's law, and he who would accomplish anything must work in harmony with it.

Selfishness is fatal; absolute independence and isolation impossible.

To accumulate wealth is the prime object of every business and professional career, but nature has large plans—has other things in view than the filling of our bag, or the boiling of our pot, and much of benefit comes to the world through him who struggles chiefly to win a prize for himself.

Shakespeare went to London to retrieve his fortune, and gave to the world the mightiest achievements of human intellect.

Watt harnessed a mighty horse in steam, and amassed riches, but how small his personal gain compared with the wealth his discoveries and appliances brought to mankind!

The projector's chief aim was for a private good, but the general benefits derived from railroads are beyond estimate, and vastly exceed any intentional philanthropy known of.

Edison has immeasurably lightened the burdens of labor, and so increased the facilities and conveniences of life that the financial competence he has attained is incidental, and bears no comparison with his service to the world.

The Vanderbilts, Rockefellers, Carnegies and other great captains of industry are not always spoken of as disinterested benefactors, but their gigantic enterprises and extensive operations have realized for themselves but a small percentage of the harvest of wealth gained to the country.

The lesson to be learned is that in all the round of human activity each purpose carries with it its own check

and balance; that the laws of compensation and equilibrium work with equal force and certainty in money-making enterprises as in the solar system, that he who would win any real success must lean on principles and work for catholic and universal ends.

It has been said of Napoleon that he did all that in him lay to live and thrive with a sensual and selfish aim and without moral principle, and his career ended in miserable failure. The history of every community furnishes many similar but less illustrious examples. As Ruskin well says: "No privilege can assist knaves, no possession enrich them; their gains are occult curses, comfortless loss their truest blessing; failure and pain nature's only mercy to them."

It is the belief, almost the conviction, of some, to use the phrase of a brilliant Kansan in regard to politics, that the decalogue and the Golden Rule have no place in business; but the eternal fact remains that the ideal is the practical; that the Golden Rule is the greatest motive power in the field of human endeavor, and the only practical principle of action in all the relations of life.

The two chief agencies in marketing the products of factory, farm and mine—the intermediaries between buyer and seller at wholesale of raw materials and manufactured articles, necessities and luxuries are the salesman and credit man.

As existing to-day, they are both of comparatively modern origin, although credit transactions and buying and selling have been continuous since the world began, and the work of salesman and credit man has been done in such manner and method as seemed best adapted to the time.

In our country in early years the bulk of the merchandise was imported, and seaboard cities were the only markets; it was customary for most merchants to make periodical visits to the cities and transact their business directly with the firms favored with their custom.

Personal acquaintance and confidence had the largest share in winning and holding trade and cementing business relations, and once a customer, it was a rare thing for a merchant to change the place of buying his supplies.

Seldom was any traveling done by city houses, and then only by a member of the firm, not to sell goods, but to collect accounts, and make investigations as to financial conditions of customers.

Early in the century, the "bagman" made his rounds on horseback selling goods by samples; he represented the extension of commerce and growth of manufactures, and was the direct connection between the port and the interior, between the centers of commerce and manufactures and the widespread country. Many of these fellows had unsavory reputations, were hard drinkers, and for slow times, fast livers, and the chief figures in many interesting experiences and adventures.

With the coming of railroads and steamboats, the horseback traveler and his saddle-bags gradually disappeared, pushed aside by the man with sample case and trunks.

The traveling salesman, as he existed thirty to forty years ago, combined the duties of both salesman and credit man, as familiar to us to-day. It was his business not alone to make sales, but to thoroughly investigate the standing of the customer, his environments, opportunity for business and likelihood of success, and credits made by the house were made almost wholly on his advice and recommendation. All business between the house and its

* An address by H. E. Hutchings, read before Credit Men and Salesmen at a banquet at the Coates House, Kansas City, Mo., September 30, 1899.

customers, such as the adjusting of differences, securing or collecting accounts, was transacted by him. This mode of doing business was suited to the times, was successful and satisfactory as to results.

The rapid development of the country and enormous expansion of business, with its sharp rivalries and keen competition, led to the discovery that specialties facilitate commerce and promote efficiency, and the salesman of general utility now finds his duties limited to selling goods, with the credit man in the office to manage the credits, and in some houses, a separate legal and adjusting department.

The rapid growth of commercial traveling the past twenty-five years is the marvel of the age. It is estimated that fully 500,000 salesmen are employed in the United States at the present time.

This great number distribute as traveling expenses annually not less than \$500,000,000, with an equal sum as salaries. This vast sum of money is scattered all over the country in the great work of pushing commerce and developing the National resources.

The character of the traveling salesman has changed very greatly the past few years. In some parts of the country it was common to find men traveling with a pistol, pack of cards and bottle of whiskey in satchel; many were dissipated and behaved themselves as roisterers and rounders and brought the craft into disrepute.

The successful salesman of to-day feels that his occupation has assumed the dignity of a profession, and he aims to deserve the esteem and respect of all classes. As a rule, he does not dissipate; has no use for vulgarity, intemperance or profanity; but is self-respecting and respected by all. He carries with him a library of information regarding his particular line, and is a constant student of new goods, prices and better methods.

In most large houses there is a salesman's department, whose manager is in daily communication with the men on the road, sending them literature regarding the merits and good points of new goods, suggesting better methods of pushing articles on which there is a liberal margin of profit, and helping them in every way to become more efficient. One house claims that the establishment of this department enabled them to increase their profits two per cent. the first year.

The salesman's success is in concentration; like Cromwell, he "not only strikes when the iron is hot, but by continual striking, heats the iron." To solve his proposition requires coolness, right reasoning, promptness, patience and never-relaxing vigilance.

His duties are too exacting to admit of much responsibility as to credits, and the tendency of modern methods is to separate more and more the credit and sales departments. But to secure the best results requires a cordial co-operation between credit man and salesman, and having in view the general results of the business, it is the duty of the credit man to persistently and assiduously cultivate such relations; unless this is done, an immense power is lost of expanding the business and keeping such expansion within safe and proper limits.

The credit man is interested in maximum sales as well as minimum losses. The salesman is equally interested in doing a safe business as in doing a large business. Co-operating, the salesman's enthusiasm finds balance and strength in the credit man's conservatism, while the credit man's caution is merged in the enterprise of the salesman.

There must be a substantial basis of truth and good will to sustain such relations as are desirable between salesman and credit man.

After hearing a remarkably improbable story, one salesman said to another: "That reminds me of one of Munchausen's yarns." "Munchausen, who is he?" was the reply. "Why, don't you know about him? He is the

most colossal example of mendacity that civilization has produced." "Excuse me, but would you mind telling me what house he travels for?" Someone has said with doubtful delicacy, that "a salesman has no more use for truth than a tom cat for a marriage license." Such a wide and sweeping statement is to be sternly repudiated, but when a salesman, in taking a property statement, says to the customer, "Why do you put your stock in at \$4,000, put it in at \$8,000; they'll cut it in two, anyway," and with no basis but such as exists in his own active imagination, recommends and urges a credit which, closely scrutinized, is found to be wholly undesirable, we are disposed to place little reliance on information received through him, and feel very much as did the Georgia jury, whose verdict read: "We find the defendant almost guilty."

But it consumes time and energy to censure and find fault; the wise plan is to minimize the bad and magnify the good; to make the best of men as we find them; trust men and they will be trustworthy; treating them truly, they will be true to us, and continually calling for truth, it will come to us from unexpected quarters.

[Concluded in next number.]

Glass Making by Electricity.

A correspondent writes: "Electricity has now been applied to so many uses that one is not surprised to find that a German inventor claims to have solved the difficulty of employing it in the manufacture of glass. For a long time past the electric current has been used in welding metal, and the electric furnace at present supplies us, among other things, with carbide of calcium—the product that supplies us with acetylene gas. But there appears to have been some difficulty hitherto in maintaining the very high temperature required in the manufacture of glass. In the new process the usual materials will, of course, be employed in the composition of the glass; but it is declared that more can be melted in a quarter of an hour by the new method than could be melted in the old way in thirty-six hours. Instead of using large crucibles it is proposed to employ small ones, which can be conveniently moved about and which can be quickly and easily replaced by fresh ones filled with the necessary constituents as soon as the others are emptied of their contents. One curious result of the new mode of manufacture will be that glass works will be frequently established near streams where the water will provide the necessary power to drive the dynamos."—*Iron and Coal Trades Review*.

The World's Supply of Platinum.

For many years between nine-tenths and nineteen-twentieths of the world's supply of platinum has come from Russia. The amount produced has ranged from 6000 pounds to 8000 pounds annually. Of late there have been signs that the yield was falling off, although the demand has steadily increased. It is probable that from one-half to five-sixths of the whole supply of platinum to-day is consumed by the electric lamp makers. Among the other uses of the metal are the construction of stills for vitriol, dental work, producing the photographic paper which gives us the "platinotype," imparting a silver tint to porcelain, pointing stylographic pens, and making non-magnetic watch springs, and certain parts of telegraphic apparatus. Most platinum is alloyed with two other metals, osmium and iridium. These latter are separated from the platinum only with great difficulty. When they are separated the iridium and osmium (combined as "iridosmine") have been practically useless, except for pointing gold pens.—*Iron and Coal Trades Review*.

The largest drop hammer in the world is the property of the Bethlehem Iron Co.—*Ex*.

NEW GOODS AND SPECIALTIES.

Dig-Ezy Pota'o Fork.

The Iowa Farming Tool Co., Fort Madison, Iowa, have included in their assortment one of the most popular tools for the purpose of digging potatoes with which the trade is familiar. It is conceded to be shaped in a proper manner for the purpose, and possesses undeniable merits that have been instrumental in increasing its popularity. The

tines are so formed that they enter the ground easily, breaking up the soil and separating the potatoes from the dirt. The shape of the fork enables the user to put the potatoes in the basket without touching them with his hands. The tool is made light and strong, easy to operate, and has the hang that is invariably appreciated by the user. The tines are made with blunt points, and are formed in a manner that makes the tool scoop-shaped. They are made both in five and six tine sizes, and dealers will do well to add this to their assortment of useful agricultural tools.

Arrow Stem Philadelphia Caster.

Among the numerous specialties manufactured by the Coleman Hardware Co., No. 59 Dearborn Street, Chicago,

Ill., the Arrow Stem Philadelphia Caster, is conceded to be one of the most popular. The desire on the part of the manufacturers was to make a caster that would have the Philadelphia stem with better holding qualities than was up to that time on the market, and they feel that in the construction of the caster which we illustrate in this article, they have at last solved the problem. It has been subjected to the most rigid tests possible, and it is believed to be the most simple and practical stem now on the market, as it can be driven in with as much ease as the old style or

barbed stem, without any danger of splitting the wood, actual tests having proven that it admirably answers the purpose for which it was designed. Another good feature mentioned in connection with this caster, is that should the hole in the wood be bored too small or shallow on account of the pointed end of the caster, it can be more easily started and driven home. This indicates that it combines the good qualities not only of the old style barbed stem, but also the chisel point, together with the additional features of the better styles. It is capable of resisting the wear and tear incident to moving heavy furniture, and

thereby lessening the liability of the caster to fall out. This is accomplished by the peculiar holding qualities of the web-shaped points. After the caster is driven home, the wood closes around and under the shoulders of these points, allowing them to exercise the holding qualities of a nail-head.

Crystal Coffee Mill.

The Arcade Mfg. Co., Freeport, Ill., are placing upon the market something entirely new in the line of coffee mills, which they name the "Crystal." We give an illustration of this novel coffee-mill, some of the unique features of which may be gleaned from the fact that it has a transparent hopper and also a transparent receiver, both of which being bright and clear, the coffee is always in sight.

The mill shown in our illustration is a one-pound mill, and the canister and tumbler made of bright, clear glass, is secured to the iron frame of the mill by clamps and rubber cushions, thus guarding it against any ordinary danger of breakage. The mills are provided with improved grinders, which will, if desired, not only grind the coffee to the usual fineness, but, if necessary, will pulverize it. When the mill is fastened to the wall, it makes a neat and handsome appearance, and the peculiar fact that the coffee is visible both before and after grinding, adds greatly to its

popularity. They are packed one each in a lock-cornered wood box, and put up one half dozen in substantial wood case. The capacity of the mill is ample for ordinary family use, and every mill is fully warranted.

Glass Tube Cutters.

The Hunt & Connell Co., Scranton, Pa., are the manufacturers of the glass tube cutter illustrated herewith. The device is designed for the purpose of cutting gauge glasses to cer-

tain lengths. One arm of the cutter is provided with a scale in inches and fractions of an inch, and a slide stop with set screw and a rotary cutter at the end. This arm is intended to be inserted in the end of the glass tube to the required distance against the slide stop or gauge, the outside of the glass tube resting in the circled end of the other arm. With a slight pressure of one hand on the handles, and a rotation of the glass with the other hand, the small rotary cutter, noted in the illustration, makes an even cut around the inside of the tube, after which a very little pressure breaks it off. They are made in two sizes, Nos. 1 and 2, No. 1 having a scale up to five inches, and No. 2 extending to seven inches. At any time when desired extra cutter wheels are supplied.

Miners' Combination Knife.

The Novelty Cutlery Co., Canton, Ohio, are manufacturing for H. Martin, patentee, No. 430 South Seventh Street, Salt Lake City, Utah, the Miners' Combination Knife which we illustrate herewith. It is, as is evident from its appearance, one of the most useful knives for general purposes that we have had brought to our attention. In it is combined two knife blades, a fuse cutter and splitter, as indicated by the letter D and the dotted lines; also a cap crimper and seater. The advantages claimed for this knife by the manufacturers are that it cuts the fuse and splits it clean and directly in the centre. It crimps the cap and thus makes a seat for it. The fuse cutter A opens automatically by pressing on the lock spring G. As it possesses great leverage, it requires but a light pressure to cut the fuse or crimp the caps. With the seater B is made a seat for cap in the powder, for the purpose of insuring a blast with certainty. When the fuse is cut with the blade D, it retains its shape in the groove made in the knife back, and is then ready for the cap without any further operation. Should the fuse at any time be soft or

swelled, it can be reduced by placing it under the seater B, when a few pressures on the seater will bring it to the proper size for cap. The point E makes a dent in the cap so that it cannot become misplaced or drop from the fuse. It is claimed that the knife blades are manufactured from the best steel, care being taken to make them perfect in temper; in fact, first-class materials only, being used throughout its construction.

X-Ray Lemon Squeezer.

The Freeport Novelty Co., Freeport, Ill., are manufacturing and distributing through the Hardware trade the X-Ray Lemon Squeezer, illustrated herewith. The plunger is made of solid aluminum and spiral in form, so

that it is enabled to worm its way into the lemon and permits the juice to follow the thread, enabling it to drain every drop possible to be obtained. The standard has an auxiliary handle that may be grasped when operating, and at the bottom screw holes are provided in order to permanently fasten this, if so desired. The squeezer is provided with a shifting fulcrum; when the handle is elevated to receive the lemon, which should be so placed as to get the

full benefit of the shifting fulcrum, the pivots are forward, and as pressure is applied can be drawn back so as to permit the fruit to adjust itself to the plunger, and thus with one squeeze get all the juice possible to be obtained. One special advantage of it is that the juice falls from the strainer freed entirely from seeds or pulp. The plunger and strainer are detachable, and for the purpose of rinsing after using can be lifted out entirely.

Harrison Bros. & Co.'s National Export Exhibit.

Visitors to the National Export Exposition, at Philadelphia, will find among its varied attractions an exhibit of Harrison Bros. & Co., Inc. It is located in the west arcade, to the right of the Auditorium, and may be readily discovered by looking for the revolving, variegated screw. The woodwork which forms the back of the exhibit, is finished in a manner to show the interior decorative stains made by this company; in fact their various products are so arranged as to give a remarkably good idea of the relation of one to the other. It will be noticed that the effect is still further heightened by the illuminated cave formed of crystal alum, which makes the base of the display. A copy of a handsome booklet, entitled: "A Hundred Years of Good Paint Making" is presented as a souvenir to those visitors who are interested in paints and chemicals.

The Rover, the prototype of the modern bicycle, appeared in 1884, the invention of J. K. Starley. It was the logical successor of the Facile and Kangaroo, and ultimately drove them both out of the market. The main principles which guided its makers were to place the rider at the proper distance from the ground; to connect the cranks with the driving wheel in such a way that the gearing could be varied as desired; to place the seat in the right position in relation to the pedals, and so that the saddle could be either laterally or vertically adjusted at will; to place the handles in such a position in relation to the seat that the rider could exert the greatest force upon the pedals with the least amount of fatigue, and adjustable also. In the Rover these principles were carried out, and it is a fact that there is not more than two or three inches difference in the machines to day and in the first Rover.—*The Bicycle World.*

RECENT TRADE PUBLICATIONS.

JOS. DIXON CRUCIBLE CO., Jersey City, N. J. The advertising department of this company are distributing a pamphlet characteristic of their methods of conveying information. It is of 20 pages, and filled with information regarding Dixon's Flake Graphite, which is claimed to be the ideal lubricant for cylinders and valves. Illustrations are given throughout, showing its proper use, accompanied with signed testimonials from engineers and machinists throughout the country who are familiar with the use of the same, and endorse its working advantages. This is a very readable pamphlet, well worthy the attention of those handling the line of goods represented.

THE DILLON-GRISWOLD WIRE CO., Sterling, Ill. Envelope catalogue of 34 pages, covering a line of their manufactures, consisting of wire nails, barbed wire, bail ties, Griswold and Diamond wire fencing, etc., and are also manufacturers of wire rods, and drawers of iron and steel wire, galvanized, tinned and coppered wire, which, when necessary, can be furnished straightened and cut to lengths. Included in its contents are a number of tables in connection with wire nails, showing standard gauges and lengths, approximate number of each to the pound, and as this covers all the variety of nails now on the market manufactured from wire, it is a very handy and desirable list for the dealer to have, as not all of them embrace in their contents information of this character.

THE JOHN B. MORRIS FOUNDRY CO., Cincinnati, Ohio, are distributing to the Hardware and stove trade their 1900 catalogue No. 5, which is a pamphlet catalogue, with heavy flexible covers, consisting of 378 pages, $5\frac{1}{2} \times 8\frac{1}{2}$ inches in size, in which are shown a line of Hardware specialties, builders' and plumbers' goods, iron pump curbs, chest rollers, coal tongs, cover lifters, hammers, sad irons, iron settees for gardens and verandas, shelf or tank brackets, etc. They are also manufacturers of the Boss wire fence ratchet and tightener, the Morris telephone and desk tablets, the Morris towel holders, Haven's patent Railroad sausage stuffers. The principal part of the catalogue is devoted to a description of the full line of stove and range repairs, adjustable fire backs, plain grate baskets, etc., with the manufacture of which this house has been well known for a number of years. It forms an extremely important line with them, and well worthy the attention of every one in the Hardware trade handling stoves, ranges, heaters, etc.

DE LAVAL SEPARATOR CO., No. 74 Cortlandt Street, New York, and Chicago. A treatise on up-to-date dairying, entitled "Keeping Cows for Profit." This is a very handsomely prepared pamphlet of 32 pages, printed on good paper, with half tone illustrations throughout the text printed in brown. The reading matter is extremely interesting to those familiar with the subject treated, and the preparation of the book and its mechanical excellence reflect great credit on the company that distributes it. It is well worth being in the hands of every dealer throughout the country handling anything in the shape of dairy supplies, as it "treats of dairying as a manufacturing business, and discusses its problems from the standpoint that every dairy farmer is just as much a business man as though engaged in any other manufacturing or commercial undertaking." It is compiled in a terse, practical manner, and is easily readable, and can hardly fail to be inter-

esting and instructive to anyone in any way concerned in dairying. The front cover shows a lithographed milking scene, and the back cover a cut of a Jersey cow, Ida Mari-gold, which received first prize at the Chicago Exposition.

J. FINLEY SMITH & SON, No. 116 Chambers Street, New York, are distributing to the trade their revised price list and illustrated catalogue of brushes, being an admirable catalogue of 72 pages, 6×9 inches in size, beautifully illustrated by half-tone, full-page pictures, showing the special lines in the manufacture of which they have been long known to the trade. These goods are marketed by the leading jobbers throughout the country, the manufacturers desiring largely to limit the distribution through such medium. Lines of goods are made to suit the demand for just this class of trade, and the catalogue gives every indication of being an attractive one to the jobbing trade, or to those handling these goods in large variety, including, as it does, everything in the brush line likely to be asked for, and made in all the various qualities that would make price an important feature, from the lowest priced to the best goods on the market.

THE MILLERS' FALLS CO., No. 28 Warren Street, New York. Pamphlet catalogue of 78 pages, 6×9 inches in size, printed on excellent paper, and finely illustrated; in fact, in advance of any previous catalogue issued by this company. This includes in the variety of its contents a full line of braces, breast drills, automatic boring tools, in and out screw drivers, socket and countersinks, Star scroll-saw machines, nail pullers and carving sets, which have been greatly improved since the issue of their previous catalogue. Included in its contents are the numerous specialties identified with the name of the company for many years, including Barber braces, angular bit stocks, patent door handles, ratchet drills, hand and breast drills, vises and drills with and without anvil, and the well-known line of Star hack saw frames and saws and saw blades, which has been greatly extended, and now includes the Star power saw, which has proven one of the most successful machines ever designed for cutting iron and steel, being largely used in factories, not only at home but abroad as well, and has proved a valuable labor-saving tool for the blacksmith shop, tool or machine room. Among the goods represented are the Goodell lathe and saw attachments, the scroll saws marketed under the name of the "Lester," the "Star," "New Rogers" and "Cricket." This desirable line of specialties is well known to the trade, and stores not in possession of this catalogue should write for the same, as the assortment of goods is important enough to be familiar with. They are large manufacturers of hand and bench vises, including the mechanic's vise with and without swivel base, the oval slide, the heavy chipping, oval slide parallel, ball clamp and pipe vises.

Carbons in diamond drills are usually reset after 40 feet of quartz, or 150 feet slate. These and their settings constitute the greatest item of expense. Six to eight 3-carat stones are used to each bit, and they cost about \$15 per carat; as it costs \$10 to set a bit, this would make each 6-carbon bit cost \$280. The cost of wear and tear per foot varies from 30 to 50 cents, according to the hardness of the rock. An average drill, including, say, 600-foot rods and 2 bits, would cost about \$2000.—*Tradesman*.

REVIEW OF THE MARKETS.

Hardware: Business continues good. Collections reported excellent, prosperous conditions increasing in every direction, with the prospect of inventories being undertaken this year under the most encouraging auspices. Indications point to a long continuance of present conditions, and future requirements will be anticipated by orders given at an earlier date for Spring specifications than for many years.

Wire Nails: Since our previous issue, an advance in the price of Wire Nails of 15 cents per keg, was announced by the American Steel & Wire Co., to take effect October 17th. Present quotations being as follows, f.o.b. Pittsburgh, terms 30 days net:

To jobbers in carload lots	\$2.05
" " in less than carload lots	2.07½
To retailers in carload lots	3.10
" " in less than carload lots	3.20

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock	\$3.25
" " less than carloads on dock	\$3.40
Small lots from store	\$3.40 to 3.55

Business continues good with similar prospects for some time to come.

Cut Nails: Following sharply upon the advance in Wire Nails, the Eastern Cut Nail manufacturers under date of October 18th, announce an advance of 5 cents per keg on Cut Nails. The following quotations representing the present state of the market, are f. o. b. Pittsburgh, the freight being added to make a net price delivered at destination:

To jobbers in carload lots	\$2.60
To " " in less than carload lots	2.65
To retailers in carload lots	2.70
To " " in less than carload lots	2.85

New York business continues satisfactory under prices named as follows:

Carload lots on dock	\$2.75
Small lots from store	\$2.90

Barb Wire: The advance in quotations on wire products affecting the price of Wire Nails, applies as well to Barb Wire, which advanced on same date, 15 cents per 100 pounds. The following quotations represent the market, and are f.o.b. Pittsburgh, net cash, thirty days:

To jobbers in carload lots, Painted	\$3.40
" " Galvanized	3.55
" " in less than carload lots, Painted	3.42½
" " Galvanized	3.57½
To retailers in carload lots, Painted	3.55
" " Galvanized	3.70
" " in less than carload lots, Painted	3.65
" " Galvanized	3.80

Business is fairly moderate, while the market is well sustained.

Smooth Wire: Advanced in price on October 17th, in common with other wire products. Demand continues exceedingly good, there having been but little let up throughout the season on this important line. Prices are as follows, f. o. b. Pittsburgh, 30 days net cash:

To jobbers in carload lots	\$2.80
To " " in less than carload lots	2.82½
To retailers in carload lots	2.95
To " " in less than carload lots	3.05

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

Auger Bits: The market on auger bits is looking up with an increasing strength. Several manufacturers have already advanced the price on Common bits 10 per cent., and on Jennings' pattern bits from 15 to 20 per cent. over recent ruling quotations.

Padlocks: Slaymaker-Barry Co.'s line of popular padlocks has been advanced in price from 15 to 20 per cent.

Pruning Shears, etc.: Seymour Smith & Son are quoting new prices on their goods, which advance recent quotations about 10 per cent.

Dumb Waiters and Elevators: The Storm Mfg. Co., Newark, N. J., have in press a new catalogue of dumb waiters, etc., with revised prices, which will advance the present rate on several patterns.

Plated Flat Ware: The International Silver Co., Meriden, Conn., send us the following revised discounts, on silver plated Flat Ware applying to their several brands and qualities:

"1847" Flat Ware	40&10%
"Anchor" " "	50&10%
"Eagle" " "	50&10%
"Star" " "	50&10%
Rogers, Smith & Co. Flat Ware	50&10%
Rogers & Hamilton " "	50&10%
Holmes & Edwards " "	50&10%
German Silver Flat Ware, unplated	50%

KNIVES AND FORKS, NO. 12.

"1847" " " " "	per dozen, net, \$3.50
"Anchor," "Eagle," "Star"	" " 3.25
Rogers, Smith & Co	" " 3.25
Rogers & Hamilton	" " 3.25
Holmes & Edwards	" " 3.00

Covert Mfg. Co. A revision in prices has been made by the Covert Mfg. Co., West Troy, N. Y., and advanced prices are announced on several lines of goods. Revised quotations are as follows:

List September 1, 1899.

Curry Combs: Edward S. Hotchkiss has published a new price list on Curry Combs, dated October 1st, which are held subject to discount of 40 per cent.

Braided Sash Cord: The Whittier Cotton Mills have recently advanced the price on their white cotton hard braided sash cord to 16½ cents to the trade.

Coil & Halter Chains: The Bridgeport Chain Co., Bridgeport, Conn., announce the following revised discounts on their coil, halter and sash chains:

Triumph Coil Chains	55%
Triumph Halter Chains	55%
Brown Coil Chains	60%
Brown Halter Chains	60%
Monarch Sash Chains	40&10%
Competition Sash Chain	50&10%

Wood Lemon Squeezers, etc.: The Tucker & Dorsey Mfg. Co. have recently advanced prices on a number of articles in the woodenware line from 7½ to 10 per cent., among which may be mentioned lemon squeezers, towel rollers, hat and coat hooks, etc.

Payson Casters: Under the date of September 5, 1899, Payson Mfg. Co., Chicago, issue a revised price-list of their anti-friction casters. This list we give below. It will be seen that a number of changes have been made in list prices, some of which are higher and others lower than heretofore. The list is subject to a uniform discount of 70 per cent.:

(Number— Size. Style.)		BRASS CASTERS.	Per set or four.		
181	045	Polished Brass, Philadelphia Stem, Brass Wheel, 1-inch.	\$1.80		
181	0045	Polished Brass, Philadelphia Stem, Brass Wheel, with Ring, 1-inch	2.01

Steward & Romaine Mfg. Co., Philadelphia, Pa., announce, under date of October 12th, that owing to increased cost of material they have withdrawn all discounts on Expansion bolts.

Cordage: Manila and Sisal Rope are held firmly at advanced prices. Quotations for carload lots are as follows, with an advance of ¼ cent in less quantity, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger	per pound, 14½ cents.
" 3½ inch	" 15 "
" 4 and 5-16 inch	" 15½ "
Sisal, 7-16 inch and larger	" 10½ "
" 3½ inch	" 10½ "
" 4 and 5-16 inch	" 11½ "
" Lath Yarn	" 10 "

Manila Tarred Rope, 15 thread is quoted at 13½ cents, as is also Manila Hay Rope, medium. A grade of Jute Rope is quoted at 6½ cents and C grade at 6 cents.

Linseed Oil: Dean Linseed Oil Co., under date of October 17th, quote as follows:

In lots of less than 5 barrels	47 cents per gallon.
In lots of 5 barrels or more	46 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

THE PHILADELPHIA TRADE.

By this time the trade has grown partly accustomed to high prices, but we are constantly assured by manufacturers that present quotations, which seem high as compared with those of a year ago, are still low, and that higher prices may be expected in the near future.

Advances still seem to be the order of the day, and almost every day's mail brings notice of further changes—all in an upward direction—while reports from manufacturers still show great difficulty in getting material, and we are frequently told that contracts for material are being made—not only for the first six months of 1900, but even reaching to the last half—our manufacturing friends evidently feeling it is necessary to contract now in order to have some assurance of getting the stock when required for next year's business.

Under these conditions, it is but reasonable to expect prices will be fully maintained, especially when it is considered that the market is practically in the hands of three or four immense corporations who control the situation, and have too much at stake to permit any decline.

The volume of business seems fair; while there is an absence of speculative buying, customers are purchasing for their daily needs, and the increased prices make business considerably larger in dollars and cents.

It is earnestly to be hoped that the retail trade throughout the country realize the absolute necessity of marking up their goods to a point enabling them to get a profit beyond present costs; otherwise the conditions of to-day are apt to net them a loss instead of a profit, and this can be readily shown by a very simple illustration, viz: Suppose a dealer has in stock a keg of 8d wire nails which cost him \$1.75, the present price being \$3.40, he figures if he sells them at that price he has made \$1.65 profit, which seems to him like a handsome profit. The sale is, therefore, made and he flatters himself he has made \$1.65, but as the dealer, however, does not intend to go out of business he next day orders another keg of 8d wire nails to replace the one he has sold—they cost him \$3.40—with the result he has not made a cent, and has simply replaced one keg of nails by another.

This same principle applies on all advancing goods, and the dealers, whether jobbers or retailers, who do not bear this in mind may find themselves facing a loss instead of a profit.

Our Philadelphia Export Exposition is now fully under way, and the most encouraging reports are received from manufacturers of the amount of foreign business which they have been able to transact through its influence.

While not claiming in any way to be a World's Fair, but simply an exposition for export purposes, it is sufficiently varied and attractive for an interesting visit, and the prospects are it will meet with decided success.

The exhibits in the Hardware and farming tool lines are particularly attractive to Hardware dealers, and we trust to have the pleasure of seeing a number of our friends in the city during the progress of this exposition.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

We are at present gliding along with the tide, but occasionally catch an order that fills our sails and makes us feel that we are strictly in the race. Another advance of 15 cents a keg in wire nails has increased the demand for same—at former prices—and influenced other items, but there are a few goods which have not the steady move that normal prices would secure.

The oyster trade is well supplied, the majority of retailers have purchased their Fall stocks, and only a few stragglers are now buying in large quantities; filling in and special orders are therefore the order of the day.

As Spring goods have not peeped above the horizon in the trade revolution, and deliveries to the small dealers

are a few months off, we await with suppressed emotion the facial expressions of surprise and consternation betrayed by a few of our customers from the backwoods when, as they call for scythes, hoes, forks, and a few other items, we announce the bottom market prices.

Collections continue good. H. W. WEBB & SONS.

THE DAVENPORT TRADE.

There is a growing feeling of anxiety as to the outcome of the coal strike at Spring Valley, and there is already a scarcity of coal for manufacturing purposes. The American Steel & Wire Co. were compelled to shut down their Waukegan Mill for want of coal, and at last accounts had only twenty-four hours' supply on hand at DeKalb. When it is known that they have no stock of nails accumulated at any of their plants, and very little barbed wire on hand, and a coal famine threatened, it may not be a question of price on these articles as much as whether the goods can be obtained anywhere at any price.

Perhaps some of your readers may not realize what an immense amount of coal is required to keep up steam in the large manufacturing plants of the American Steel & Wire Co. They use two hundred tons at Waukegan, one hundred tons at DeKalb and three hundred and fifty tons at Joliet per day. They depend on coal for fuel in every mill they have, with the exception of Anderson, Ind.

The recent advance of three dollars per ton on wire, nails, fence staples and barb wire, and four or five dollars a ton on woven wire fence is accepted by the trade as a matter of course, and the new price has been adopted and fully and firmly maintained by the Hardware jobbers, and we are of the opinion that the end is not yet. Poultry netting and screen wire is apparently sure to follow.

Sales for October show a handsome increase as compared with a year ago. Money is less plentiful than earlier in the season, and collections are correspondingly more difficult. SICKELS, PRESTON & NUTTING CO.

THE CLEVELAND TRADE.

The scare that so called trusts has produced seems to have betrayed a lack of faith in our Government. Some of our statesmen need sermons on the text that "Faith worketh patience."

The proposal of Mr. Bryan to amend the Constitution, transferring the rights of the States to the National Government, seems to be a radical change in the Democratic doctrine. Every step in that direction is averse to democracy. There is abundant power in the States to control trusts, whenever the people are satisfied that they need control. Pressing necessity has always been the excuse when the rights of the people were to be invaded. Impatience in the face of seeming danger comes from a lack of faith in the system of government.

If the people cannot devise a remedy at once we must wait until the deleterious influence of trusts is established. One thing we may well believe, that there is no evil that cannot be controlled. The danger is that we impair the best government that the world has ever seen in our haste to cure a temporary evil.

The law of trade in the long run cannot be violated with impunity; trusts are not superior to it. Unless combinations and co-operation are superior or equal to competition they will not continue. We can safely wait with composure.

The conference recently held in Chicago was wisely convened, and the publication of the addresses may contribute valuable suggestions. What is needed is open, frank discussion that correct conclusions may be reached, and the remedy can be provided without changing the Constitution. There is an agreement in the demand that corporations offering their stocks to the public should be required to make reports under a statute that makes false reports criminal. Inconsiderate and hasty conclusions are out of place in national affairs; time and patience will develop

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

statesmanship. God's mill grinds slow but sure. He seems never to be in a hurry, and we are likely to be. If business integrity is in danger by loose incorporation laws in one State we cannot afford to abrogate the laws of other States to prevent it, as the other States have ample authority to protect themselves, while if the Federal Government is given the power, they could bind us all. It is wise to endure the ills we have rather than to fly to those we know not of.

Advances are still being made in many lines of goods. The ore men will soon fix the price of ore for 1900; then we shall have better means for forming an opinion about prices for the year to come.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE VICKSBURG TRADE.

The trade for October, while satisfactory, is not booming. The planters are busy picking cotton while the beautiful weather lasts. The price is more than expected, even by the most sanguine, and all debts will be easily paid, and money will be plentiful by Christmas.

The high prices are retarding the sale of goods to some extent. Outlook very encouraging. Payments excellent. LEE RICHARDSON & CO.

THE OMAHA TRADE.

There is little change of note to report in the condition of the Hardware market. The demand shows a steady increase and the supply of goods apparently grows shorter, so that the difficulty of procuring goods wherewith to supply the trade is a problem growing day by day more difficult of solution. In this territory, the demand for nails and wire has been something unusual. Dealers during December and January last year bought heavily and have not stocked up since that time, anticipating lower prices. Now these stocks are broken, they hesitate about putting in carloads at present prices and the result is a large movement in sort up orders for nails and wire.

Collections are unusually good and nothing appears in sight to interfere with the unusually large and active Fall business, except the question of securing the goods with which to supply the demand. RECTOR & WILHELMY CO.

THE GRAPHITE TRADE.

Vice-President Walker of the Dixon company gave a dinner to the members of the office staff at the Union League Club last week. Twenty-three were present, including President E. F. C. Young, and George W. Wollaston, manager of the London branch.

Naturally the after dinner remarks were "shoppy" and full of deserved individual compliment.

There has been painstaking and hard work done since January with a very bright business outlook for the balance of the year, and suggestions from the heads of departments were favorably received.

The company is about to build a three-story addition to

the pencil works, 175x40, and other improvements will follow.

Orders are being filled with commendable promptness, considering the general business activity.

No increase of orders will in any degree influence the management to depart from its inviolable rule of standard of quality for all its productions. This will be strictly adhered to and all products bearing the Dixon name can always be relied upon as being the same in every particular as supplied heretofore, and upon which the company has built up the prestige which has made it "The largest concern of its kind in the world."

JOSEPH DIXON CRUCIBLE CO.

Trade With the Transvaal.

Some indication of the prospective effect of the Transvaal War upon the commerce of the United States with South Africa is found in the facts recently presented by the Treasury Bureau of Statistics in its monograph entitled *Commercial Africa in 1899*, and published in our issue of 10th inst. This shows that the imports of the Transvaal in 1897 were, according to the best estimates, over \$100,000,000, of which about \$85,000,000 were from Great Britain, \$13,500,000 from the United States, \$5,000,000 from Germany, and the remainder from Belgium, Holland, and France. All of these importations reach the Republic, which has no seaports, through the ports of Cape Town, Port Elizabeth, Port Alfred, and East London, in Cape Colony; Durban, in Natal; and Lourenco Marquez, in Portuguese East Africa. The direct importations into the Transvaal through Cape Colony in 1897 were \$20,363,572, and through the other ports of Cape Colony probably an equally large amount; those through Durban and other ports in Natal, \$11,339,042, and those through Lourenco Marquez, in Portuguese territory, \$12,936,237. In addition to this, large quantities of goods imported into Cape Colony, Natal and Portuguese East Africa, for consumption in those colonies, were afterwards sold for consumption in the Transvaal, thus making up the grand total of over \$100,000,000. It will be observed from this statement that up to the present time the importation of goods into the Transvaal has largely passed through the British ports of Cape Colony and Natal, which will now be closed against commerce for that State, thus temporarily changing the course of the supplies which the large population there located

must continue to have. The closing of these ports will compel the Boers either to obtain their supplies of imports through Portuguese territory or else live upon what they can obtain from their own territory and that of the colonies which they may invade, since both the South African Republic and the Orange Free State are surrounded by British territory on every side, except at the east, where Portuguese East Africa intervenes between the Boer States and the Indian Ocean. The total value of goods in transit for the South African Republic and the Orange Free State passing through Portuguese East Africa in 1897 was in round terms \$14,000,000, and the exports from the United States to Portuguese East Africa amounted in 1897 to \$1,800,000, and in 1898 to \$2,897,000. Of this exportation from the United States, the very large proportion was breadstuffs, amounting to \$1,227,000; manufactures of cotton, \$13,811; manufactures of iron and steel, \$151,543; illuminating oil, 416,620 gallons; breadstuffs, \$103,813; manufactures of wood, \$142,189, and manufactures of tobacco, \$4582. As the very large proportion of the goods reaching the ports of Portuguese East Africa last year was transshipped to the Transvaal, it may be assumed that practically all of the goods above named were for that territory.

As already indicated, however, the Transvaal has up to this time taken a large share of its imports from and through the British colonies of Cape Colony and Natal. Imports into the Cape of Good Hope from the United States in 1897 amounted to over \$10,000,000, out of a total of \$86,000,000, and of this probably one half was intended for consumption in the Transvaal. The imports into Natal from the United States in 1897 amounted to \$3,200,000, out of a total of \$30,000,000, and it is probable that a considerable share of this was destined for the Transvaal, since the rail distance from the chief port of Natal to the Transvaal is much less than that through the ports of Cape Colony.

What the general effect of the war will be upon the commerce of the United States with the South African Republic, which has become by reason of its mining industries and population so large a consumer, will naturally be a subject of some speculation. As already indicated fully four-fifths of the imports into the Transvaal in 1897 came from Great Britain, the total importation from Great Britain in that year being estimated at £17,012,000, or \$82,508,000, while the next largest source of importations was the United States, from which the importations are estimated at £2,747,000, or \$13,323,000.

STANLEY'S
PATENT
Roofing
Bracket.

STANLEY

Rule & Level Co.
New Britain, Conn.

SOLD BY ALL
HARDWARE DEALERS.

The parts are of Spring Steel, firmly riveted together. Push the beveled ends up under two layers of shingles, already nailed down; the Bracket has two separate bearings on the roof, and is so formed that any increase of pressure from above, increases its stability. One dozen per minute can be placed in position, or removed; and great economy in lumber and nails will be found. There are no loose parts to get lost; and no nail-holes are made in the roof. In constant use these Brackets will last a life-time.

No. 1. Roofing Brackets, 8 inch, 1/2 dozen in box. Per Doz., \$3.00

The Chinese Circulating Medium.

The recent reports which indicate that the Chinese copper coins known as "cash" are disappearing because of their appreciating value and that silver coins are to fill the vacancy thus created in the currency of China, lend special interest to a statement recently prepared by the Treasury Bureau of Statistics regarding the currency of China. The money of China, it says, is uncertain as to quantity and quality. No accurate estimate has been made of the amount of money in circulation in the Empire, while no accurate statement can be made to-day of what its value will be to-morrow. Based upon silver, its value fluctuates with the changes in the market price of silver. The copper "cash," valued at about one-tenth of a cent, is the actual circulating medium, while the tael is the nominal standard for larger sums, it being merely a given weight of silver, and not a coin. Actual silver circulates in two forms, the "dollar" and the "sycee." The dollar was originally the Mexican dollar, and became a popular and generally accepted form of currency wherever obtained. So convenient was it that large quantities were imported for use as currency. More recently, however, mints for the coinage of dollars purporting to be of weight and fineness equal to Mexican dollars have been established, not by the central government, but by the authorities of the various provinces, and the result is that the rivalry between these provincial mints has reduced the weight and fineness of the "dollars" which they issue until the provincial silver "dollars" are looked upon with distrust. Additional mints, however, are being established, the machinery for them being from the United States. Some half dozen of the cities of China now have their mints for the coinage of "dollars," and work is in progress upon local mints in other cities, so that by the end of the present year, according to a recent issue of the *North China Daily News*, at least ten different kinds of silver coins purporting to be "dollars" will be upon the market. In addition to this uncertainty may be pointed out the fact that the "tael" differs in various cities and provinces, the weight of silver recognized as a tael being greater at some points than at others. The consequence is that while the haikwan, or customs tael was worth on January 1, 1899, 72.2 cents (gold), the Shanghai tael was worth but 64.8 cents. In other places it varied in amount between these two extremes. Even the "sycee," which is an actual quantity of silver cast in the form of a shoe with the weight written upon it in Chinese characters, is somewhat uncertain as to its value, both by reason of the constant fluctuation in the price of the silver which it contains and the uncertainty as to the fineness of the silver utilized. All efforts to learn the exact fineness of the standard silver used in the sycee have been unsuccessful, though the estimates put the rate at ninety-seven one-hundredths, which is considerably in excess of the American coin, which is ninety one-hundredths fine. The sycee is merely an indefinite quantity cast in the form of a woman's shoe, its

actual weight being determined by agents or officers appointed by the merchants to weigh the sycees, accuracy and integrity on their part being insured by actual physical decapitation of those who are found dishonest. Even the "cash," a copper and zinc coin about the size of our 25-cent piece, having a square hole in the center for convenience in stringing quantities of them together, varies greatly both in fineness and weight, in some cases 1000 of them being equal to a "dollar," while in others nearly 2000 are required to equal a "dollar." Gold coin is practically unknown in China, no coins in this metal being made at the mints, and gold coins of other countries have seldom, if ever, circulated, though the value of the metal is fully recognized, and gold, whether in coin or bulk, proves a medium of exchange upon determination of its weight and fineness when occasion requires. All customs duties are collected in what is known as the "Haikwan tael," which has a somewhat higher value than the tael standard accepted in the respective cities.

"VELOX" BALL BEARING GRINDSTONES

MARK A NEW ERA IN MOUNTED GRINDSTONES.

Factory and Home Office, **Belvidere, Illinois.**

Growth of the English Language.

If some recently published statistics are to be trusted, the English language is developing more than any other, past or present. While the German contains 80,000 words, the Italian 45,000, the French 30,000 and the Spanish only 20,000, Dr. Murray's English dictionary is expected to contain no fewer than a quarter-million words, more than half of which have come into use during the last half-century. A great part of these additions are technical or scientific terms.—*Pall Mall Gazette*.

The largest match factory in the world is at Barberton, Ohio. Its capacity is 100,000,000 a day.—*Ex*.

The largest college or university is Harvard, considering the greatest number of students. Her undergraduates exceed in number those of Oxford.—*Ex*.

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling price, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

- A, 200 pages, - - \$1.00
- A 2, 400 pages, - - \$1.50
- A F, 200 pages with flap, 1.25
- A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

- B, 200 pages, - - \$1.00
- B 2, 400 pages, - - \$1.50
- B F, 200 pages with flap, 1.25
- B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 7 1/4 inches.*

FOUR EDITIONS:

- C, 200 pages, - - \$1.00
- C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50
- C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 1/4 x 8 inches.*

FOUR EDITIONS:

- D, 200 pages, - - \$2.00
- D F, 200 pages with flap, - 2.50
- D 2, 400 pages, - - 3.00
- D F 2, 400 pages with flap, 3.50

Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CH For Iron, turn to IRO
 " Parers, Apple " PAR " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

ADDRESS

HARDWARE PUBLISHING CO., 143 Chambers St. New York City.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Auburn, Ind.—Alvordton Hardware Co.
 Bisbee, N.D.—C. W. Cairncross has gone into the Hardware business.
 Bloomington, Ind.—The Allen Hardware Co.; capital, \$9000. The directors are: R. N., J. H. and Anita Allen.
 Bowbells, N. D.—Carson & Culp.
 Bowdon, N. D.—J. Austin Regan.
 Cass Lake, Mich.—J. E. Johnson and M. Toole are to engage in the Hardware business.
 Churdan, Ia.—W. L. Tipton has opened up a new Hardware store.
 Crowley, La.—The McAyeal Hardware Co., Limited, has been incorporated by John McAyeal, Chas. D. McAyeal, M. E. McAyeal and others to conduct a general Hardware business. Capital stock, \$10,000.
 Curtis, Neb.—Mr. Carstenson.
 Denver, Col.—The Ford Hardware Co.
 East Jordan, Mich.—D. C. Loveday & Co.
 East St. Louis, Ill.—Barbour Hardware Co.
 Emporia, Kan.—Hirly Davis.
 Franklin, Tenn.—Britt Bros. will shortly engage in the Hardware business.
 Hancock, Minn.—Stone & Munro.
 Holloway, Minn.—Denstedt & McIntyre.
 Iona, Minn.—W. E. Locke.
 Jefferson City, Mo.—The Quernheim Hardware Co., St. Louis. Hardware business. Capital, \$5000. Incorporators: H. W. Quernheim, A. H. Quernheim, C. Heflinger; all of St. Louis.
 Kenyon, Minn.—Kenyon Hardware Co.
 Mason City, Ia.—J. B. Green has gone into the stove and Hardware business.
 Medina, N. Y.—The Bignall Co.; to deal in Hardware; Capital, \$30,000. Directors: Francis H. Whipple, William B. Robbins and William U. Lee, Medina.
 Meriden, Kan.—Becker Bros.
 Mersey, Wis.—A. B. Peterson has opened a Hardware store.
 Moro, Ore.—J. M. Filloon.
 Neosho, Mo.—J. M. Boyd.
 Princeton, Ill.—Pettie & Church have gone into the Hardware business.
 Rochester, Minn.—Frank Cook.
 Rome, Ga.—The Griffin Hardware Co. has been incorporated by W. J. Griffin, F. M. Irwin, J. A. Glover and others. Capital stock, \$30,000.
 Rutland, Ia.—F. S. McClure.
 Saybrook, Ill.—S. H. Spradling.
 Seattle, Wash.—The Union Hardware Co.
 Smithfield, Ill.—Reynolds Bros.
 Stanley, Wis.—Mathew Lauer.
 Taylorville, Ill.—The Henson & Cheney Hardware Co.; capital stock \$2500, Hardware, tinware, etc. Incorporators: J. F. Henson, T. L. Cheney, M. W. Henson.
 Warner, Wis.—D. H. Richards.
 Wykoff, Minn.—W. F. Ware and L. W. Jordan.

Changes and Improvements.

Augusta, Me.—The Brooks Hardware Co. have purchased the stock of J. C. Lander.
 Birmingham, Ala.—The Mayberry Hardware Co. have removed their business from No. 1922 Second Avenue to Nos. 1821-1823 First Avenue.
 Birmingham, Ala.—The Prowell Hardware Co. have moved from No. 1912 Second Avenue to No. 1917 Second Avenue.
 Birmingham, Ala.—The Spiro & Long Co., Hardware and stoves, have moved from No. 1914 to No. 1920 Third Avenue.
 Bloomfield, Iowa.—Warrington & Prevo have sold their Hardware store to George Roth, of Unionville, Mo.
 Fairmont, Minn.—John Sickler, Jr., and B. E. St. John buy a half interest in the store of R. Jones.
 Grinnell, Ia.—I. S. Bailey will remove his Hardware business into the large middle store in the new Spaulding block, on Main Street, when the room is ready for occupancy.
 Hartland, Me.—A. D. Linn has recently purchased the Hardware business of C. H. Smith.
 Kenmare, N. D.—Tasker & Schultz succeed T. W. Tasker & Co.
 Keokuk, Ia.—Huckins Bros. & Martin have purchased the Hardware stock at No. 312 Main Street, formerly owned by C. L. Becker, and will continue the business at the old stand. They have made extensive additions to the stock, which is now complete in every department, and will conduct an up-to-date store.
 Lakefield, Minn.—Strome & Bruner succeed Scott & Beall.
 Litchfield, Minn.—Settergren Bros. succeed John Palm.
 Malta, Ill.—Harrington & Erwin succeed B. B. Smiley.
 Ottawa, Ill.—George Hum succeeds E. H. Pederson.
 Raleigh, N. C.—The store and Hardware business formerly conducted by J. C. S. Lumsden, of this city, will in future be continued under the firm name of Lumsden Brothers. The principals of the new firm are R. E. Lumsden, F. H. Lumsden and L. H. Lumsden, who have given their entire life work to the building up of the business which in future they are to conduct for themselves.
 Rockford, Ill.—The Clark & McKenney Hardware Co.; name changed to the J. L. Clark Co.
 Rock Island, Ill.—Norman Woodin buys a half interest with R. G. Summers.
 Salt Lake, Utah.—The George M. Scott-Strevell Hardware Co. have purchased a tract of land fronting west eleven rods on Third West Street and ten rods fronting south on Third South. The business of this firm has increased so extensively that a warehouse on the railroad becomes a necessity. A substantial building covering the greater part of this piece of ground will be erected in the near future. The building

will be two stories and a basement, but no definite plans have been prepared as yet.

San Francisco, Cal.—In the new wholesale business district south of Market Street another fine block will be built. This is a five-story building for Miller, Sloss & Scott, wholesale dealers in Hardware, which will be erected on the southeast corner of Mission and Fremont Streets. The cost will be \$200,000.

Sunbury, Pa.—William H. Heim succeeds Heim's Sons.

Stronghurst, Ill.—C. M. Rodman succeeds Chant Bros.

Trosky, Minn.—J. Mitchell succeeds John Denhart.

Gentlemen,-

We are just noticing in HARDWARE the advertisement of your carpenters and machinists' tools, which are of interest to us. So please to post us your latest catalogue and let us know your VERY LOWEST quotations for same. Should be these quotations convenient with us, we are in a situation to sell a big lot of your articles.

Yours truly,

[Handwritten signature]

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page news of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

Rock Hill, S. C.—J. H. Brown, of Detroit, Mich., and W. J. Warmlesley, of Louisiana, Mo., will establish an agricultural implement factory at Rock Hill.

Sharon, Pa.—The Sharon Steel Co. has been incorporated by F. H. Buhl, N. McConnell, W. Flinn, C. L. Magee, G. W. Dorr and others; manufacturing iron and steel. Capital stock, \$3 000,000.

Topeka, Kan.—The United States Zinc Co., of Galena, has filed with the Secretary of State an application for a charter. The capital stock of the company is \$100,000. The directors named for the first year are as follows: C. C. Arnett, M. L. Sutton, Ed. Glaze, John Herman and J. L. Williams.

Changes and Improvements.

Brooklyn, N. Y.—The plant of the large lock and bolt works of William H. Brooks, now located at No. 15 Seabury Street, will soon be removed to Long Island City to the new factory now being erected for the concern on Borden Avenue by the New York Land & Warehouse Co. The factory is two stories high and 60x80 feet.

Fairport, N. Y.—The Alta Implement Co. now have a branch from the Central to their new plant. The machinery is fast being put into running order, and regular work will begin soon.

Galt, Ont.—M. J. C. Dietrich, one of the saw making firm of Shurly & Dietrich, has just returned from a trip to Sherbrooke, Que., accompanied by W. W. Janney, superintendent of the factory. Mr. Dietrich bought out entire the Beaver Saw Works at Sherbrooke, and intends to carry on business there to meet the Eastern trade of the firm. They intend to add the manufacture of axes to the industry. Shurly & Dietrich are also removing their iron bedstead factory from St. Catharines, purchased from the R. H. Smith Mfg. Co., and are putting up a large stone building here for its reception.

Indianapolis, Ind.—The Parry Mfg. Co. have purchased an 80-acre tract of land on the Belt Railroad, upon which they will build a complete new plant.

Kansas City, Mo.—The Sherwin-Williams Co., of Cleveland, Ohio, one of the largest manufacturers and distributors of paints and colors in the world, are to establish a branch house in this city at once.

New Haven, Conn.—The John Adt & Son Mfg. Co. has been compelled to make a

large addition to its factory on State Street. This addition is almost completed, and is partly occupied by the employes of the firm, necessitating a large increase in the number of people employed by the firm. A large boiler and steam engine are now being placed in this addition. The firm has witnessed such an increase in its business, the manufacture of automatic wire drawing machines, which are shipped to every part of America and Europe, that the increase in the working force and in the building itself was decided upon.

North Wilbraham, Mass.—The Cutlery Co. are building an addition to their storehouse, 30 by 50 feet, to accommodate their increasing business.

Philadelphia, Pa.—The Henry Troemner Scale Co. will erect a three-story addition to their works.

Pittsburg, Pa.—The Union Casting Co. has been compelled to increase the size of its plant. The foundry is a new concern, having been in operation but a month.

Quincy, Ill.—The Quincy Stove Mfg. Co. has increased its capital from \$40,000 to \$60,000.

San Francisco, Cal.—P. T. Taylor & Co. has been incorporated by L. A. Taylor, P. L. Bannan, H. H. Taylor, T. F. Bannan, and W. B. Kollmeyer; manufacture all kinds of gears, machinery, tools, etc. Capital stock, \$20,000.

Waterport, N. Y.—The Waterport Mfg. Co. has been incorporated by D. D. Bromly, W. F. Bromly, and A. M. Ives; manufacturing agricultural implements. Capital stock, \$15,000.

Worcester, Mass.—The Reed & Prince Mfg. Co. have purchased the business, machinery and tools of the National Rivet Co., of New Haven, Conn. The newly organized property is being moved to the plant in this city, on Tainter Street. With the machinery of the National Rivet Co. added to the present plant, the output of the shop will be greatly increased.

Recent Fires.

Louisville, Ky.—The Southwestern Agricultural Works, owned by Brennan & Co., situated at Eighth and Green Streets, have been destroyed by fire, at a loss of \$25,000. Fully insured.

Newark, N. J.—The Varnish factory of Joseph A. Smith & Co. has been destroyed by fire. Loss, \$20 000.

Peoria, Ill.—Stuber & Kuck's tinware manufacturing plant has been burned. Loss, \$10,000; insurance, \$8000.

Philadelphia, Pa.—William Heller, brass foundry, No. 328 Noble Street, damaged by fire at a loss of \$2000.

Pittsburg, Pa.—The nut, bolt and nail works of Marland, Neely & Co. on Merri-man's Alley, Southside, have been destroyed by fire. The loss will amount to between \$35,000 and \$40,000, but is covered by insurance.

Fenton, Iowa.—H. O. Rindy, sporting goods, Hardware, etc., has opened new store.

Grawn, Mich.—McCowan & Son, sporting goods, Hardware, etc., new firm has commenced business. H. B. McCowan will manage the business.

Harrisburg, Pa.—The Standard Seamless Tube Co. has applied for charter. Charles E. Pope, John H. Nicholson, W. H. McKelvy, Herman J. Veeder, and J. Erastus McKelvy are mentioned in connection with the new company. Capital stock, \$500,000, and a plant will be put up in Pittsburg for the manufacture of seamless tubing.

Hartford, Conn.—The Hartford Accumulator Co. has been incorporated by H. B. Philbrick, G. L. R. Eldridge, and F. W. Barhoff; making, buying, and selling vehicles propelled by electricity. Capital stock, \$1800.

Jersey City, N. J.—The LeRoy Bicycle Co. has been incorporated by Charles J. Hayes, William A. Jennings, John R. Keim, and Charles Simmons; manufacture bicycles, etc. Capital stock, \$5000.

Kinston, N. C.—E. M. Hedges will install machinery for the manufacture of spokes, handles, rims, etc.

Kittery, Me.—The Worcester Liquid Air Co. has been incorporated by C. C. Corbett, G. J. O'Doherty, Addie M. Melvoon, and others; electricity, compressed and liquid air and automobiles. Capital stock, \$500,000.

Los Angeles, Cal.—The Automobile Co. has been incorporated by I. R. Dockweiler, C. Johnson, H. E. Carter, R. D. Morris, and

D. Laubersheimer; to buy, sell, lease and operate automobiles. Capital stock, \$50,000.

New York, N. Y.—The Safety Brake & Coaster Co., to manufacture bicycle supplies and safety brake patents. Capital, \$250,000.

Oshkosh, Wis.—The Dunham Gun Co. is the name of an organization that has filed articles of incorporation with the Register of Deeds and Secretary of State. The capital stock is \$10,000 of 100 shares of \$100 each. The incorporators are Charles Norton, Dio W. Dunham and Emma M. Dunham.

Paterson, N. J.—The Quick Mfg. Co., principal office No. 96 Broadway; manufacturing bicycles. Capital, \$50,000. Incorporators: Hiram M. Quick, Edward M. Rodrock, Rayton E. Horton, all of Paterson, N. J.

Pittsford, Mich.—Wadsworth & Byers, sporting goods, Hardware, etc., have opened new store.

Richmond, Va.—W. S. Wall contemplates the organization of a stock company for the manufacture of automobiles.

San Francisco, Cal.—Sparks Automobile Co. has been incorporated by C. H. Taylor, W. J. Bartlett, T. J. Sparks, John Curtin, and S. Goodenough; to make, buy and sell automobiles. Capital stock, \$1,000,000.

Saratoga Springs, N. Y.—The Hudson Gas Motor & Vehicle Mfg. Co.; manufacturing motors, vehicles, etc. Capital, \$100,000. Incorporators: I. B. Fryer, Ballston Spa; J. P. Brennan, W. S. Robertson, both of Saratoga Springs.

Sioux Falls, S. D.—F. A. Wiley, bicycles, jewelry, etc., has opened new store.

Springfield, Ill.—The Woods Motor Vehicle Co., of East Orange, N. J. Capital stock, \$10,000,000, has been licensed to do business in Illinois, with a capital of \$65,000.

Waco, Tex.—W. M. A. Romans, sporting goods, Hardware, etc. has opened new store.

Changes and Improvements.

Anderson, Ind.—The Barnes Hardware stock has been purchased by Kaufman & Davis, who carry a line of sporting goods, Hardware, athletic goods, etc. They have enlarged their quarters.

Antigo, Wis.—Hessel & Leykom, sporting goods etc., have just completed a large addition to their store.

Bliss, N. Y.—Rowley & Cross, Hardware, bicycles, succeeded by B. H. Rowley.

Cleveland, Ohio.—The Cleveland Ball & Screw Co., whose plant is located in the old Brush Electric Co.'s building, are making some important changes in equipment, which will practically double their capacity for turning out balls.

Crookston, Minn.—Hawkins & Olds, bicycle dealers, have been succeeded by W. H. Olds.

Dalton, Mass.—E. Williams, sporting goods, Hardware, etc., stock purchased by John Glennon.

Detroit, Mich.—The Olds Motor Vehicle Co. are erecting extensive buildings, which will be ready for occupancy about November 1st. The office building, 50x170 feet,

three stories high, is now ready for the roof. The machine shop, 70x280 feet, two stories high, is nearing completion. When the motor vehicle works are completed a small city will be inclosed in brick and mortar. It is understood that the total investment of the company will exceed \$500,000.

Findlay, Ohio.—The Kellogg Seamless Tube Co., plant has been sold to Edward Baltzley, of Washington, D. C., for \$43,000, who will enlarge the plant immediately. The plant will employ 500 men. The Baltzley-Heckert Co. will run eight or ten other plants throughout the country. The new system, it is claimed, will revolutionize the steel tube industry.

Freeport, Ill.—The Stover Novelty Works, manufacturers of bicycle machinery, drill presses, etc., have changed their name to Hoefer Mfg. Co.

Johnstown, N. Y.—J. R. Vosburgh & Brother, bicycle dealers, are adding a line of sporting goods, Hardware specialties, etc.

Middletown, Conn.—At a meeting at Portland, Me., of the stockholders of the Keating Wheel Co., it was unanimously voted to increase the capital stock to \$5,000,000 and to change the name to the Keating Wheel & Automobile Co. The present capitalization is \$250,000.

Oswego, N. Y.—John Dorsey, Hardware, sporting goods, etc., closing out business.

Tacoma, Wash.—The T. V. Tyler Co. has been dissolved.

Recent Embarrassments.

Boston, Mass.—Benjamin B. Emery, bicycle dealer, Eldon Street, is in bankruptcy. Liabilities \$19,000, of which \$11,650 is secured, with assets \$10,300.

Kingston, N. Y.—Charles F. Winkler, bicycle repairer, has filed petition in bankruptcy. Liabilities \$673.55; assets, \$417.91.

METRIC SYSTEM OF WEIGHTS AND MEASURES.

The metric system is based upon the distance from the equator to the pole. The ten-millionth part of this arc was chosen as the unit of measure of length, and called a *Metre*. The cube of the tenth part of the metre was adopted as the unit of capacity, and designated a *Litre*. The weight of a litre of distilled water at its greatest density was called a *Kilogramme*, of which the thousandth part, or *Gramme*, was adopted as the unit of weight. The multiples of these, proceeding in decimal progression, are distinguished by the employment of the prefixes *deca*, *hecto*, *kilo* and *myria*, from the Greek, and the subdivisions by *deci*, *centi* and *milli*, from the Latin.

TABLE FOR THE CONVERSION OF METRIC WEIGHTS AND MEASURES INTO ENGLISH.

Metres into Yards.	Kilometres to Miles and Yards.	Litres into Gallons and Quarts.	Hectolitres into Quarts and Bushels.	Kilogrammes into Cwts. Qrs. Lbs. Oz.	Hectares into Acres.

CARY MFG. CO.,
 19-21 Roosevelt St.,
 NEW YORK.

SAMPLES
 BY MAIL. =

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

**"HAS OUR ESTEEMED FAVOR."**

Edward Darby & Sons, Philadelphia, Pa. [*Wire Goods*]: For the past few years we have been in **HARDWARE**, and we beg to remind you that it has our esteemed favor, and will recommend the same to anyone desirous of a good, useful, common-sense trade journal such as **HARDWARE** is.

The Brownfield Buyer's System

Is a practical, economical and efficient method of preserving Catalogues, Price-Lists, Samples, and printed or written memoranda relative to your subjects of purchase or business in a convenient and accessible form for quick reference. It will interest you. Full particulars for the asking. Write to

THE FOLDING PAPER BOX CO., South Bend, Ind.

"IT KEEPS ME POSTED."

Sickels, Preston & Nutting Co., Davenport, Iowa. [Wholesale Hardware]: HARDWARE keeps me posted not only on the market, but on new goods and specialties which are ever being manufactured. The trade reports are especially attractive, and give one information on the markets and business situation, as well as politics in various parts of this country.

Theo. Neuhaus.

"BEST INVESTMENT EVER MADE."

Divine Bros., Chadwicks, N. Y. [Buffing Wheels]: Our advertisement in HARDWARE was the best investment we ever made in the advertising line.

"TOO VALUABLE TO BE WITHOUT."

Charles T. Mitchell, Baltimore, Md.: HARDWARE is too valuable to be without.

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

"INCREASED IMPORTANCE TO THE TRADE."

Carlin & Fulton, Baltimore, Md. [*Wholesale Hardware*]: It is with great pleasure that I add a few words to the many compliments which you no doubt are frequently receiving testifying to the increasing importance of your Journal to the Hardware trade. Its advertising columns are of undoubted advantage to both inventors and manufacturers and of the greatest interest to the dealers throughout the country. Its trade reports, its discussions on varied topics and its editorials, are all well worth perusal by everyone in any way identified with the craft, and wishing you continued success, I remain,

George L. Irvin.

GREAT SANITARY STOVES. ALUMINUM OIL HEATERS.

Read what WILLARD H. MORSE, M.D., F. B. S. Sc., has to say about them:

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg. Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates—durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its twentieth volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

HARDWARE

It is very evident from recent developments that the "Admiral" believes in short engagements. He learned that trick when he tackled Manila.

Since our article on another page was "on press" we learn that at the Convention of the National Hardware Association, in Pittsburgh, the intended reception at the Duquesne Club, which was intended to take place on Wednesday evening, November 15th, will be given up, and the Smoker, which was on the original programme, will be given instead at the Monongahela House on that evening, J. W. Hubbard being the chairman of the committee having the Smoker in charge.

It is stated that in Florida when they want to accelerate the speed of a telegram, they paste a piece of pink paper on it, to rush it; this they call a "pink rush." Won't somebody "pink rush" Otis' successor?

George Richards Co., Dover, N. J., have done themselves justice by building a new brick store around their old wooden Hardware establishment, which has been an old-time landmark. It now conforms in outline with the remainder of their possessions, and was successfully accomplished without the slightest interruption to their daily business.

When the Admiral "popped," though it's pure supposition, Mrs. H. must have thought 'twas sincerest of quests; before her lips answered he knew the decision, for her cheeks showed the color her first name suggests.

At the October meeting of the Board of Governors, the following names were added to the rolls of the Hardware Club:

John Simmons, No. 110 Centre Street, New York.
Albert C. White, Providence, R. I.
Charles M. Woods, Havemeyer building, New York.

According to a Treasury report, Detroit River tonnage has increased steadily from 20,235,249 tons in 1880, to 27,900,620 in 1896, excepting 1892, when the phenomenal total of 28,553,819 tons was recorded. This makes the tonnage about equal to the aggregate tonnage recorded for the Suez Canal and the St. Mary's Canal in the Soo River in 1897.

"Give me what that girdle bound and take all else the sun goes round," is what the man hummed when his "Regal" No. 10 pulled the long skirt free from its fastenings. What the woman said was in blank verse.

The Laughlin Nail Co., Wheeling, W. Va., have well under way a new shovel plant, to be located at Martin's Ferry, Ohio, and hope to be in the market with a full line of shovels about February 1, 1900. This company are making preparations to start up their cut nail factory in season for Spring trade, and make the claim that the output of no individual factory will equal their intended production.

The Van Wagoner & Williams Hardware Co., Cleveland, Ohio, and New York, have an exhibit of their line of manufacture at the National Export Exposition, Philadelphia. J. J. Teeple, their popular representative, has been

in charge, working like a beaver in the interest of the company. He formed one of the committee which accompanied the national delegates to Washington when they visited that city in the latter part of October. H. E. Cooper, representing the Nicholson File Co., Providence, R. I., and N. A. Gladding, representing E. C. Atkins & Co., Indianapolis, Ind., are also on the same committee.

Count Esterhazy's cousin, Christian, did good Christian work when he forced that tricky relative of his to face three years' imprisonment and refund 35,000 francs. This was a clear case of being thrown from the family circle into a private box, and a bad box at that.

George Buckelew, of New Brunswick, N. J., has been a collector of Hardware curios from time immemorial and has succeeded in bringing together enough historical relics of that kind to establish a museum. His antique door locks, from the old original wrought iron ones big enough for a jail, which formerly formed part of our imports, to some heavy ones formerly used on Government buildings, when compared with the present styles, serve to show in an admirable manner the evolution of lockmaking.

One of our correspondents interested in beekeepers' supplies, makes this statement: That many smokers and extractors are sold in foreign countries, and that his company has in hand an order from Jamaica, W. I., for 250 smokers and four dozen extractors, besides other goods amounting in all to about \$4700. He says that during the past season there has been exported to Sydney, Australia, alone, some \$12,000 to \$15,000 worth of beekeepers' supplies; the Sydney market buying largely of the gears, etc., in parts, and completing the machines there. This showing would indicate that this industry was worthy of cultivation.

We understand from the Kelly Axe Mfg. Co., Alexandria, Ind., that in the international wood-chopping contest, which took place in Queensland, Australia, on August 9th, that the three first-prize winners all used "Kelly" axes. The office of the company in New York is at No. 82 Chambers Street, in charge of W. H. Trabue. They have been fairly overwhelmed this year with an export demand for their goods of an extremely gratifying character in every way.

We never believed it was good advice to give a genius that he should jot down, on awaking at midnight, all the disturbed thoughts which made sleep impossible. We have a recent instance of how a well-developed nightmare may be held responsible for a whole volume. Such a book has been recently published by Lieutenant Francis A. Adams, and called by him, "Who Rules America?" It professes to give the most astounding disclosures regarding the several hundred trusts which he claims are dominating the industries of the country and grinding the workingmen in the dust to the accompaniment of a brass band. Special chapters are devoted to the Sugar Trust, the Coal Trust, the Standard Oil Trust, the Tobacco Trust, etc., which makes exhilarating reading when compared with the successful fiction of the period. The book has been advertised in a way that should make it called for, by the refusal of the Manhattan Elevated Railway to allow the sale of it on their stands.

HARDWARE

VOL. XX.

NOVEMBER 10, 1899.

NO. 3.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 148 CHAMBERS ST., NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	-	-	President.
E. N. ROOT,	-	-	Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The good business so long prevailing still continues. On seasonable goods especially the demand is remarkably encouraging. The orders for the jobbers for immediate delivery are not so plentiful as has been the case, conservatism in present purchases being a noted quality. This would indicate a desire to realize on stock already in hand, with a view to making the inventories that are now so imminent, possess a quality in which profit will predominate. From indications manifested many of the advances now taking place, seem to be on account of advanced quotations being the vogue. But the dealers are complaining that they are becoming entirely too frequent, unjustifiably so, and the possibility of killing the goose that lays the golden egg is one worth contemplating in a studious frame of mind. A steady and profitable range of markets for many years, is within the reach of distributing methods providing they are only fair and reasonable. But cupidity will certainly prove to be the rock on which the movement will split unless some great justification for continuous advances makes itself manifest. The retailers are the only ones who are still slack in getting the full benefit from the present condition of the markets. "They either fear their fate too much, or their desires are small" who dares not put it to the test and corral the good profits the mill-gods provide. This conservative set of philanthropists will doubtless take their inventories this year at "old prices," instead of being up-to-date in a manner that will make good dividends available.

The reasonable claim is made by some of the dealers that the adoption of shorter credit terms will breed a greater degree of discontent among the jobbers, whose relations to the usual long-winded time taken by retailers in at least two thirds of the towns of the country are well known. Those retailers whose regular accounts are settled quarterly or thereabouts, unless a tempting "2 off, ten days" is given as a bribe, will cause the jobbers to find their daily cash receipts grow fine by degrees and beautifully less. Should the jobbers not receive the same from the manufacturers, who can the more readily urge prompt payment, or slow shipments as the consequence of delayed settlement, it would create an issue which would excite discussion; "30 days, 2 off, ten days," as urged by some of the jobbers, seems to be paying too much for money in these "three and a half per cent. per annum" days, and would need reconstructing just as soon as the jobbers'

stock got priced up to current quotations. Profits will prove too close to shade by allowing 2 off for the saving of twenty days. Why not make it "thirty days net," with nails and other close-selling goods, "cash on delivery," or even with interest added from date of invoice as a penalty for neglect? Some rigid rule will have to be decided upon in order to bring the trade out of the easy methods so long prevailing in the financial end of the handling of Hardware.

The method in so frequently changing the prices of Files is criticized by some of the jobbers on account of the trouble given in correcting old lists and catalogues and sending off new lists, in fact overturning the retailers from their mental balance by radical changes every few months. We presume the cause is, that File makers were so slow in advancing prices earlier in the season that it was a steady market until double prices on material forced the first advance, not a heavy one, and made booking of new orders imperative. On these orders not enough difference in price was realized, so, as in many other lines, it was followed by a further advance in the interest of the manufacturer, which will now be found reasonably well sustained. No doubt the varying discounts covering so various a product as to quality and distribution, make a uniform advance readily obtainable by a new list, but almost impossible by any re-arranging of discounts, no manufacturer daring to tackle the apologetic correspondence that would then be made necessary, through the fear that some competitor would "flim-flam" the quotations.

There are still some lines of winter goods remarkably late in reaching the warehouses of jobbers, notably axes, orders for which were in a number of cases given quite early in the season in order to secure a full supply, the manufacturers adopting every precaution, as they supposed, to insure it, but inability to obtain stock and material at prices to make their orders remunerative, was followed by delay in obtaining it at almost any price, and the result is delayed shipments, anxiety and apprehension on the part of the jobber, and an unsatisfactory state of affairs generally.

Gratifying Our Desires.

Dr. Johnson has already placed on record the philosophic fact that "our desires increase in accordance with our ability to gratify them," and this fact is made evident from the trade reports which show that a demand for a better class of goods is noticeably strong wherever the bone and sinew of our industrial forces are having work in plenty at increased rates of pay.

It is a fact worthy of mention that the industrious mechanics who are purchasers of Hardware, when prosperity spreads its beneficence on all alike, desire to be better clothed, better shod, better housed, and better fed, before they begin to hoard the surplus of cash received. They desire to improve their surroundings, and aspire to the comforts of the wealthier portion of the community, which precarious times have so long denied them the possession of, and consequently expenses for everything along the line that edges upon leading a worthier and happy life are more greatly expanded, and a demand is created for a class of goods deemed impossible to market only a few years ago, when bargain-counter methods formed star attractions.

This disposition of an increasing wealth is characteristically American, and even among the foreign element

of our population it is one of the first evidences of the Americanizing influences which are fostered by more rapid methods of production, higher wages and a desire for healthier homes to enjoy existence in.

The Commerce With Our New Possessions.

Commerce between the United States and Cuba, Porto Rico, Hawaii and the Philippine Islands continues to grow with amazing rapidity; the imports from these islands showing an increase 61 per cent. greater than in the corresponding months of 1898 or 1897, and the exports to them 161 per cent. greater than in the same months of 1898 or 1897. The total of our imports from these four islands or groups of islands was in the 9 months of 1899, \$53,273,224 against \$34,471,276 in the corresponding months of 1898, and \$33,059,105 in the same months of 1897, while our exports to them in 9 months of 1899 were \$29,921,783, against \$11,339,833 in the corresponding months of 1898, and \$11,480,153 in the same months of 1897.

An examination of the details shows that in the matter of exports our sales to each of these islands or groups of islands have been greater in the 9 months just ended than in any corresponding period in the history of our commercial relations with them, except those to Cuba in the year in which reciprocity brought our sales to that island to a much higher figure than they ever attained in any preceding or subsequent year. From Porto Rico, Hawaii and the Philippines the imports of the 9 months just ended are larger than in any corresponding months in the history of our commerce with those islands, though from Cuba they are necessarily less than in the years prior to the destruction of her sugar plantations and works during her war with Spain, our chief sugar supply at that time being brought from Cuba.

A study of our exports to those islands, and especially of the increase, indicates a rapid development of the agricultural and business interests in the territory supplied by these exports.

Death of William M. Fairbien.

William M. Fairbien, who has been connected with the Charles Parker Co., Meriden, Conn., as principal representative, since 1878, died at his home in Brooklyn, N. Y., Sunday, October 29th. He had been suffering from nervous prostration and brain trouble for a year or more, but the immediate cause of his death was paralysis. The company in whose employ he was had realized for a long time that he was in need of rest and recuperation, and had made several efforts to induce him to take a long vacation, which would include a trip to Europe, and give him the rest he so much needed. But his devotion to business was of that character that he preferred to remain with his hand on the wheel.

Mr. Fairbien was born in Dunbar, Scotland, in June, 1846, and came to this country when he was about seventeen years of age. He was connected with a number of Hardware concerns following his advent into the industry, among which were the Russell & Erwin Mfg. Co., the old house of Sheldon, Hoyt & Co., the well-known jobbers, and others, later connecting himself with the Perin & Gaff Mfg. Co., Cincinnati, Ohio, for whom he traveled extensively throughout the South; soon after the close of the War coming to New York, and later joining the staff of the Charles Parker Co. Mr. Fairbien was very highly regarded by his confreres in the trade, and a great favorite with the travelers, all of whom knew him well. He was possessed of a superb

memory, having been quite a student of literature, and fully supplied with general information to an extent that made him highly sought after by his associates. His devotion to the interests of the company he represented was well known, and highly appreciated by his employers. Announcing his death, the Charles Parker Co. refer to him as "our principal representative in the large Western cities, and recall his genial disposition and happy personality, which endeared him to all with whom he came in contact. Knowing him to have always been zealous in our interests, we desire in this manner to express to his friends among our customers a deep regret at the great loss we have all sustained."

Mr. Fairbien is survived by a widow, residing in Brooklyn, and leaves a father, mother, four brothers and a sister in Scotland.

Bissell's Cash Prize Offer.

The Bissell Carpet Sweeper Co. intend repeating this year on a little larger scale, the Cash Prize offer which proved so popular a feature with the trade handling their specialties during the past three years. They received many complimentary notices and obtained most excellent results through this feature, so that at this date they can announce to the trade generally that their cash prize offer for 1899 and 1900 will go out about November 1st and will consist of twelve prizes ranging from \$4 to \$60 each, for the best "ads" written by their customers or their employees, the same to appear in the papers between December 1st and January 1st. The electrotype sheet accompanying this offer will be the most complete they have hitherto produced and will include electros representing all our foreign possessions, Bissell goods having found their way into Cuba, Hawaii and the Philippines as well as every other civilized country on the globe.

National Sportsmen's Show.

The National Sportsmen's Association, J. A. H. Dressel, General Manager, No. 280 Broadway, New York, are progressing with their extensive preparations, which are intended to make the Sixth Annual Sportsmen's Show the most successful and interesting of any that have been held so far. It will be given in Madison Square Garden, March 1st to 17th, 1900, and the arrangements include all the features that have made previous shows so attractive, including a miniature lake with a fine fish exhibit, a big game park, an array of guides and noted hunters, Indian village and other object lessons of outdoor sports. It is the design to use in the Show next year all of the area of the ground floor of the Garden, confining the exhibits of commercial organizing, guns, ammunition, golf supplies and sporting goods generally to the gallery, where ample space can be given to a proper display without interference with the more pictorial and instructive features of the exhibition. It is suggested by the General Manager that early applications for space should be considered by intending exhibitors, as the Show will be a most encouraging exhibit under more prosperous conditions than ever.

The Brownfield System.

"If you want to know ask us" is the way the Folding Paper Box Co. on page 60 of this issue direct attention to their Brownfield Filing System. What is the best thing to do with catalogues and quotations so that they may be easily referred to by the one receiving them, is the perplexing problem of every merchant. By the aid of this system the difficulty seems to be entirely overcome. This firm is supplying dealers quite extensively in every State. And the reports which we hear about the system and its methods prompt us to recommend that a correspondence for full particulars be started, as we believe that every merchant will derive benefit by so doing.

"The Man in the Corner" Moralizes.

All the world loves an athlete, just as it did in the days when men in iron punched and slashed each other in the lists of the tourney for the smiles of the ladies, and every man was his own lawyer, judge and executioner, with right on his side until he met a knight with a longer arm or a sturdier stroke. Napkins, dress suits and a revised criminal code have altered our manners, but beneath the artificial veneer of culture we are much the same, and brawn as well as brain has its votaries among all kinds and conditions of folk.

But the ideal combination is a partnership of Thought and Thews—a trained mind in a trained body, with the powers of both accurately gauged, and both serving the needs of the central "I" that rules, instead of hedging it about with limitations. There is a confidence, a consciousness of reserve power and a ready alertness in the bearing of such a man that influences his associates and leads him to success when men of greater natural powers imperfectly cultivated could not make a showing. It is this combination of educated forces that gives to the college man his peculiar charm and that constitutes his chief (if not his sole) advantage over the rest of us. The colleges are wise in laying particular stress upon athletics—and so, for a different reason, are the Y. M. C. A. and the institutional churches, for the man who finds in the healthy exercise of the gymnasium a vent for his surplus energy is less likely to be attracted by vice, nor, if he desires to lead his fellows in his little arena, will he do anything which shall injure his physical prowess.—*J. B. Comstock.*

Taylor's Hotel Reminiscences.

In a recent number of the New York *Herald* in a reminiscient article concerning Taylor's Hotel, Jersey City, the writer stated that "Noah Taylor was a clerk in a lottery company which had an office in Jersey City, that had sold all the tickets for a certain drawing except two. One of these he tried to sell for the sum of \$20 and was unable to negotiate it. Some one suggested that he keep it himself, which he accordingly did. The ticket drew the capital prize of \$70,000."

Now the only fact stated in the above paragraph, is the one that the ticket drew the capital prize. The facts of the matter are as follows: Johnny Beatty who was running a policy shop on one side of the street, while Noah Taylor's brothers were in the same business on the opposite side, did not have a ticket that Noah Taylor was looking for with number 34 upon it, which Mr. Taylor was very anxious to get for this great lottery scheme which was to take place that day, tickets for which were \$20. Mr. Beatty had in his pocket a ticket with this number upon it, which he intended using himself, being prepossessed by the number 17 which was on the same ticket; but as he was in the business, which Noah Taylor was not at that time, he felt as though he ought to sell it when a regular customer wanted it. Noah Taylor was actually unable to pay for the ticket and promised to give him the price of it "on Saturday when he got his pay." With Mr. Beatty it was a purely business transaction, and a more surprised man than he can scarcely be imagined when the returns for the lottery came in about noon, showing that the ticket which a few hours before he had claimed as his own, had drawn the capital prize of \$70,000.

In accordance with the laws of the State of Kentucky, fifteen per cent. of prize money was retained by the State to go toward the school fund, so that Mr. Taylor's share of the ticket was \$59,500 in cash. This was in 1856 and he did not make the purchase of the hotel until 1859, it being 1860 before he had it in full operation. The lottery company prevailed upon Mr. Taylor to leave his money in the business, or a portion of it, which he did, and being a fairly

successful business man, he was enabled at a later day to purchase the hotel.

The first thing Noah Taylor did upon getting as much of the money as he desired was to purchase a house for his parents, which at that time was considered a very creditable act on his part, and it may be stated that although he was indebted to Mr. Beatty for his surrender of the ticket he had personally selected, he never felt that sense of gratitude that inclined him to reward Mr. Beatty beyond his business commission.

Drill-Sharpening in the Transvaal.

A correspondent of the *Johannesburg Star* in discussing a statement made in that paper that a man had sharpened 1257 hand-drills in nine and one half hours, says that he can discover nothing wonderful in that performance. He goes on to say that at the Norse Deep Mine 2000 hand-drills are in use, and they were formerly sharpened by two men; but as one day they both wanted to go to a dog fight, they hurried up and finished the 2000 drills between them by 12 o'clock. The following day the manager told the foreman smith that if two men could sharpen 2000 drills in five hours, one man should do the lot in ten hours, and now one man is doing the whole 2000. On the day of writing this the man had got through at 3 P.M., sharpening the 2000 drills in seven hours, and to fill up his time he tightened up the fan-belt, let the steam-hammer together, shod half a dozen mules, and then had half an hour to spare.

Newspaper History.

The first English newspaper appeared in 1619. It was called the *Weekly News*. The first German newspaper was *Das Frankfurter Journal*, founded in 1615. The first French newspaper was founded in 1632. The first Swedish newspaper was the *Argus*, founded in 1730. The first Turkish newspaper was *LeCourier de Smyrne*, founded in 1826. The first Russian newspaper appeared in 1703. In 1851 the Shah of Persia permitted the publication of a newspaper. The first press that Chile owned was brought from the United States in 1810. The first paper founded in New York was the *New York Gazette*, founded October 16, 1725. In 1720 there was a printing press in Jamaica, West Indies. Cing Pomona set up the first types and took the first impression of the press ever set up in Polynesia. This was on the 29th day of July, 1817. The first paper issued in Connecticut was the *Connecticut Gazette*, founded in 1755. The first paper issued in Maryland was the *Maryland Gazette*, founded in 1727. The first paper issued in Delaware was the *Courant*, founded in 1761.—*Press and Club Bulletin*

New and Old Firearms.

A correspondent of the *London Times* writes that some interesting experiments were recently carried out in Belgium in order to compare the results of firing with old and new firearms. Five weapons were chosen for the purpose: (1) the flint lock of 1777; (2) the hammer gun of 1841; (3) carbine of 1843; (4) the Albani rifle of 1867; and (5) the Mauser magazine rifle of small calibre of 1889. Comparing the flint lock of 1777 with the Mauser rifle of 1889, the precision of the latter was found to be twice that of the former, and the initial velocity twenty times as great. The hammer gun of 1841 proved to be distinctly inferior to the flint lock of 1777, though the latter had the great disadvantage of missing fire more frequently.

A Berlin physician has written an article on the dangers resulting from what are considered insignificant wounds. For instance, of thirteen injuries to the thumb, permanent disability followed in sixty per cent. of them.—*Exchange.*

Women are not permitted to be photographed in China.

HARDWARE TOPICS BY THE WAY.

Plg iron continues to hog the market.

A sale is a sale—until the goods come back.

New version: Old King Coal, he is a dirty soul.

When the pirate is in power no honest man need apply.

If you have set out to fight the trusts, don't be a Don Quixote.

Trusts were made while justice and the citizen slept. But that isn't to say that they stole their existence. They merely fooled us, and made good their advantage.

Even the victorious thief exclaims: How the proud have fallen!

Phariseeism in business discounts merit—until you are found out.

Republics are not ungrateful to the chosen few. Neither are the trusts.

Rubber-plated or cushioned horseshoes is the latest idea in experiment.

We don't want Expansion in piratical boots. Piracy never endures long.

Iron soars higher and our hopes soar with it. Misfortune never comes singly.

When you are among robbers do as robbers do or you will perish by the wayside.

Strike you win; strike you don't win. Haven't the strikers tired of the game yet?

It's a social crime as well as a business disadvantage to be so honest as to become offensive.

The spoils belong to the trust. When trusts disintegrate, you need only look for the vacuum.

The weak must look to the strong to be lifted up. This is true commercially as well as spiritually.

Some men are called tramps because they hadn't sense enough to steal themselves into well-to-do-ness.

"We sell jacks for all trades: we can lift anything," is the announcement of a dealer specializing jacks.

Incendiary fires for profit's sake are growing scarcer. Here's where civilization wins. But, mayhap, we have too many policemen.

A Westerner advertises a cement under the name of Roman Mortar, which even the rammers of Caesar could not butt asunder.

Don't give your fellow man his dues unless you absolutely must. Remember, even the law has many breaks through which you might escape.

If you fail to advertise in harvest time, you earn the stubble field. If you don't sow in Spring or Fall you can only expect to meet your Beresina.

Truth hurts, and woe to the man who can not tell it independent of consequences. The modern edition of truth is not defined in the dictionary.

It will come to pass that the buyer will demand a legal

guarantee with every buy. And by-and-by the buyer will be a candidate for the lunacy inquest.

Is this sudden business prosperity really stable? It looks rather boomish. Is it only a bubble? Aren't we too fast? Isn't there another day to do business in?

Spain fell because it was rotten. It is only a shadow of its former self; and all despite the infallibility of the sponsor of all greatness! This shows that even infallibility fails.

It's come to pass that a big wholesale house employs an architect in its structural department whose duty it is to furnish plans and specifications free to prospective builders.

My readers will kindly excuse my Oompaulish idiosyncracies. It's all the newspaper's fault. They had no business to ground the cable circuit in the junk shop of Egyptian parchments.

When Italy hasn't a panic it has an earthquake. No wonder Italians flow to our sewer trenches and fruit stands by the thousands. Good thing the thunder of the Vatican has lost its terror.

The public spirit proved that true merit will out. Schley is to-day the hero of Santiago Bay, and Sampson is merely the biblical Samson. Business men may deduce a valuable moral from this denouement.

As a good Christian atheist Ingersoll discounted the hypocritical theists by all odds. What if you be honest for policy's sake and rob your fellow man in the guise of Christianity and a theocratic countenance?

And how about belting? Haven't we about conquered the world? But we haven't achieved anything new in belting. It's all improvement. How about leather belting that isn't leather, and yet as serviceable and durable?

The Lake trade is biggest in years. Trouble is, there are neither enough ships nor railroad cars. There is a glut of prosperity. Every natural source is gorged with the supercreations of artifice. This is all well enough for the present. But, afterward?

Every true American is a royal Republican. That beats all vaunted imperialism. Wouldn't you rather be world traders than narrow-minded shopkeepers? Imperialism of the progressive American kind is no monarchical ghost, but a resurrection of the old Hanse.

A Western Hardware store was plundered, and to prove that they had been there the thieves even carried away the front door. The dealer now offers his store as a ransom for the door, for the door bore his name, and he fears he will be made the scapegoat by the robbers.

Mistakes make the man. All you have to do is to improve the results and acknowledge the mistakes. For mistakes will surely find you out. But, no matter how mistakeless you become, you will never be infallible. That's no human goal. Infallibility is a fact in detail exceptions only.

Two serious contingencies may confront the iron and Hardware manufacturers this winter. The first is the shortage of skilled labor; the second the fuel supply. This is especially the case in the Upper Lake section, for the coal shipments lakeward are yet far from being adequate,

and the railroads will not have an adequate rolling stock at their disposition if the present ratio of merchandise traffic continues.

If you everlastingly bother your head about the political ship your own will go to smash under your individual nose. The body human at large is not responsible for misdirected human justice. Political roguery is a necessary evil of the body political. If that body is too inert to cure itself—well the Grim Reaper wasn't made for nothing.

L'entente cordiale is but the natural tie that binds the Anglo-Saxon races. America owes Great Britain a great deal financially, including her commercial empires. Putting Uncle Sam into the sandals of Abel, the Albion, Cain, has now the opportunity of redeeming himself. United, these two countries could police the world. But in the past, British assurance has been but an idle dream. Egotism surmounted all other considerations.

Keep your nose out of other people's business! England pays the piper now, and she is liable to pay a great deal more than she bargained for. Aren't you glad now that the Anglo-American alliance is not a written compact? Uncle Sam may safely sympathize from afar, but methinks he isn't fool enough to rake the English chestnuts out of the African fire. There may be a hidden shell in that fire, and our Uncle wouldn't be himself without his landmark whiskers.

When God distributed his talents he didn't make the people all rich at once. But he made them all equal in the sense of opportunities. If the fellow with the lowest gift became eventually a millionaire, and the fellow with the largest gift a pauper—who was to blame? The giver or the receiver? Methinks the blawsted fool who didn't know enough to hold or improve his gift. I only speak of self-made millionaires; the others only deserve our pity and contempt. We take our satisfaction out of the truism: Stolen riches run on greased ways.

Some people deliberately commit suicide; others are helped to the deed. Dead men tell no tales, but the ghost of retribution forever stalks on earth. The rogue is never safe, not even in death. The trouble is, innocents are often engulfed with him. But the wrath of right knows no human distinction. We are simply the chattels of fate, and fate forecloses at will and mood. The fellow who imagines he can escape the eye of fate while blinding earthly justice with thousand dollar bills, is a poor rabid dog, indeed. Therefore, you who are trammelled and downtrodden, don't clamor for earthly justice! The High Executioner's pay car will come around in due time. Work, and keep on working; suffer, and continue suffering. One is often punished because he is loved. Rather die poor than a disgraced criminal or feud-avenger!

Cleveland, O., Oct., 1899.

JOHN B. RINDFLEISCH.

A Progressive Hardware House.

The Sickels, Preston & Nutting Co., of Davenport, Iowa, to whom we referred in our previous issue as having given up the retailing of Hardware after a successful business of 49 years, was founded in 1850 under the name of T. Close & Co.; George H. Sickels, brother of Robert Sickels, then residing in the East, being the Company. He was represented later by Robert Sickels, and in 1855 the firm became Geo. H. Sickels & Bro., and shortly after simply Robert Sickels. In 1857 A. J. Preston entered the firm which then became Sickels & Preston. In August 1864 J. R. Nutting became connected with the house, and thirteen years later acquired an interest in the business. The concern were incorporated in 1891 as the Sickels, Preston & Nutting Co., with the following officers: Robert Sickels, president; A. J. Preston, vice-president; J. R. Nutting, treasurer and general manager; Grant Nutting, secretary.

N. & G. Taylor Co.

N. & G. Taylor Co., Philadelphia, have a very attractive and interesting exhibit at the National Export Exposition, now being held in that city. They show a miniature house roof covered with the "Taylor Old Style" brand of roofing tin, one section flat seam and the other a standing seam. There is also to be seen a section of roof covered with tin shingles and tiles made from the same brand of tin. Under this roof is a wall or partition forming the background of the exhibit, and paneled with very interesting photographs of interiors and exteriors of the firm's tinplate works. A handsome picture of old Independence Hall, which is well-known to our readers, as being covered with this firm's special brand of Terne, the "Taylor Old Style," stands out conspicuously, and there is also a photograph of the White House or Executive Mansion, their brand, the "Taylor Old Style" also being used on this building. The firm also displays old prints showing how tinplates were made in 1714. They also illustrate the sizes of tinplate in use in 1720 and 1732.

Along the sides of the exhibit in well-arranged boxes, are piles of boxes of tinplates representing the firm's well-known brands of bright tin, "Brilliant," "Royal," "Merion," "Linden," and "Almond," and in roofing plates, their own original brand, "Taylor Old Style." They also show their "Taylor Roofing Tin," "Columbia," "Maple Redipped," "Knoxall" and "Globe" brands. The boxes are all opened for the inspection of visitors. Samples of the materials used in the manufacture are also exhibited, such as tin, lead, palm oil, cleaning mixtures, bran, flour, etc. Their ventilators and their makes of solder, babbitts, type metals, etc., are also displayed.

The firm received bronze and silver medals of award at the Franklin Institute held in Philadelphia in 1874, and also at the Centennial National Exposition in 1876.

They issue a very neat photograph of their exhibit which can be secured free of cost by applying to them.

Pungent Paragraphs.

It requires a cool hand to deliver ice.

The chimney is one of the few smokers that is easily sooted.

Women are usually in a hopeless majority at the summer resorts.

The seventeen year locusts should come under the head of time flies.

Man once ate the cream, but now they cremate the man.

To the deaf and dumb man actions speak louder than words.

In the game of life the one-armed man always plays a lone hand.

There is no sympathy between a proud mind and a beggar's purse.

The sexton makes a grave mistake when he digs it in the wrong lot.

Always pay your milkman spot cash. Never request him to "chalk it up."

Beauty is nature's first gift to woman, and it is the first one she loses.

The man who doesn't put his hand to the plow will get none of the plow-shares.

The man who is shadowed is apt to have a good deal of light cast on his character.

A good housewife never wastes good bread by trying to transform it into bread pudding.

A physician practices on his own patients; an amateur musician practices on the patience of others.

Large heads do not always indicate genius. Too often they are monuments of the previous night's foolishness.

The young man who can take a pretty girl for a sail and content himself with hugging the shore has wonderful self-control.—*Chicago News*.

THE PARIS EXPOSITION.

The edifice at the Paris Exposition which is to be known as the United States Publishers' Building, and now being constructed under the authority of Commissioner General Peck, is to be an annex to the Department of Liberal Arts and Chemical Industries, of which A. S. Capehart is director. This building is for the exclusive exhibition of American printing house machinery and allied interests, and in it will be maintained a headquarters for the publishers of the United States. These headquarters, as well as the building, will be under the charge of Charles H. Simms,

Around these headquarters will be installed the exhibits of American printing-house machinery, appliances and supplies. These, for obvious reasons, cannot be described in detail at this time. It is enough to say, however, that they will comprise in their composite as well as in sequence form, an exhibit which will include practically all of the very latest, most novel and efficient machinery, appliances, devices, methods and processes now employed in modern United States commercial, publishing and newspaper printing establishments—beginning with the handling of

UNITED STATES PUBLISHERS' BUILDING, PARIS EXPOSITION.

assistant director of the Department of Liberal Arts and Chemical Industries.

The building will be unique both in the character of its construction and appearance. It will be situated immediately adjoining the main exhibit palace in the Esplanade des Invalides section of the Exposition, the palace in which will be displayed the manufactured products of the United States, such as decorations and furnishings of public and private buildings, silverware, jewelry, stationery, ceramics, etc.

The ground to be occupied by the Publishers' Building is studded with a series of shade trees. The interior will resemble a large gallery made up of a series of domes supported by ornamented columns, the whole handsomely and appropriately decorated.

In about the center of the building—which it will be observed is to be one continuous exhibit hall—will be located the space known as the publishers' headquarters. These quarters will be equipped with appropriate furniture and modern conveniences for correspondence, mail, telegraphic, messenger and other necessary service, and will be available to United States publishers as a general rendezvous and meeting place; and at these headquarters United States publishers who may desire courtesies from the Exposition authorities will be expected to register.

UNITED STATES PUBLISHERS' BUILDING, PARIS EXPOSITION.
Section Interior Perspective.

the single movable type, in a well arranged and perfectly equipped commercial printing office; the various machines for the mechanical composition of type, the latest appliances for the practice of electro-deposition processes, a complete commercial book-binding establishment, introducing the latest automatic machinery for this class of work; various styles of embossing, scoring, mezzotint color and book printing presses, and an up-to-date multiple newspaper perfecting machine of large capacity.

American Machinery at Paris Exposition.

Willard A. Smith, director of Transportation and Civil Engineering of the United States Commission, Paris Exposition, states that the American exhibit promises to be large and thoroughly representative.

"Owing to the nature of the exhibits and the character of the buildings," he added, "this department will be represented in several different locations. The exhibit of the merchant marine will be made in the Merchant Marine Building on the banks of the Seine. The principal features will consist of a large exhibit by the American lines, and models illustrative of American yachting. Permission has also been secured to install in this building models of American naval vessels, and it is intended to show important battleships, etc., which have become famous in the recent war. This exhibit will prove a great attraction, not only to Americans, but to representatives of other countries.

"In the Palace of Transportation and Civil Engineering, on the Champs de Mars, will be located the United States carriage and vehicle exhibit. It is expected that only vehicles of the very highest quality will be shown, and that the entire exhibition will be made by some ten or twelve of the leading American carriage builders. In the same location, on the ground floor and partly on the gallery, there will be an exhibit of civil engineering, which will consist of models, maps, photographs, etc., illustrating the engineering features of our great cities, transportation lines, etc. One of the most important of these exhibits will be a model, some twenty feet in length, of the Chicago drainage canal. In connection with this will be shown models of all the great variety of excavating and conveying machinery which was used in this most important of recent works of this kind. These models will be shown in operation, and it is believed that this will be the best exhibit of an engineering character ever made at any exposition. Similar models of several of the large cities will also be shown.

"The railroad exhibit, consisting of American cars, locomotives, railway machinery and appliances of every kind, will be made in the buildings provided for this purpose at the Bois de Vincennes, where all railway exhibits by all countries will be located. There will be at least sixteen American locomotives, which, on account of their magnitude and perfection, will be very attractive to foreigners. The fact that our locomotive builders are now securing business in all parts of the world, including even France and England, gives this exhibit peculiar importance and significance at this time. Steel cars and other recent developments in American railroading will also be properly represented.

"At the Bois de Vincennes will also be located the bicycle and automobile exhibits. A space 8600 square feet has been secured for the American bicycle building. It is located in conjunction with a great bicycle track for showing the bicycles in operation. American builders are determined to show their ability to do the bicycle business of the world. They will erect a handsome building, and will certainly make the largest and most important bicycle exhibit made by any country.

The population of Jerusalem is 45,000. Of these 28,000 are Hebrews.—*Exchange*.

Export Notes.

Brooks wire nails are being shipped largely to Havana.

The Medart Patent Pulley Co., of St. Louis, lately made a shipment of pulleys to Berlin.

The Okonite Co., of this city, are shipping quantities of rubber converted wire to England.

The Edison Mfg. Co., of Orange, N. J., have shipped quantities of their specialties to London.

F. A. Errington, of this city, shipped recently automatic tapping and threading chucks to Antwerp.

E. B. Estey & Sons, of this city, recently shipped a car-load of woodenware specialties to Brussels.

John F. Worth, of Brooklyn, is about to ship 250 dozen street brooms to Havana, for cleaning its streets.

The Link Belt Mfg. Co., of this city, is about to make a shipment of their conveying machinery to Havana.

The Zucker, Levett & Loeb Co., of this city, are shipping dynamos and electro platers' supplies to Paris.

The Wyoming Shovel Co. made shipments of shovels to Costa Rica and Mexico, through Fox Bros. & Co., of this city.

The Waterbury Clock Co., of Waterbury, Conn., have shipped several cases of clocks to Zanzibar, East coast of Africa.

The Abendroth Mfg. Co., of this city, shipped recently spiral riveted and stove pipe to Baranquilla, Republic of Colombia.

The William F. Wall Rope Co., of this city, have been shipping some rope and cordage to Baranquilla, Republic of Colombia.

The Bausch & Harris Machine Tool Co., of Springfield, Mass., recently exported five cases containing radial drills to Gothenburg.

The Weston Electric Instrument Mfg. Co., of Newark, N. J., have forwarded several cases of its specialties to B. O. Henrich, at Berlin.

The Acme Machinery Co., of Cleveland, recently made a shipment of machine tools to Italian shipbuilding yards, through a New York machinery house.

The Douglas Ax Mfg. Co. exported recently 125 cases of cast steel axes to Gothenburg, Sweden. The order was secured through Hammacher, Delius & Co., of this city.

The Enterprise Mfg. Co., of Philadelphia, last week shipped several cases containing cobblers' kits and other specialties to South American ports, through Flint, Eddy & Co.

The Cleveland Machine Screw Co., of Cleveland, have just received an order for \$60,000 worth of its specialties for shipment to Charles Churchill & Co., Limited, of London.

The Westinghouse Machine Co., of Pittsburgh, will make a big shipment of machinery to the British Westinghouse Electric Co. for a plant which the latter concern is erecting in Dudley for the local electric light company.

Tragarth & Co., of Gothenburg, are buying quantities of lathes and other machine tools in this country. J. Step-toe & Co., of Cincinnati, last week forwarded three cases of machine tools and five 5x10 lathes were shipped at the same time by a New England concern.

RELATION OF SALESMAN TO CREDIT MAN.--II.*

Continued from our issue of October 25, 1899.

Too often weather conditions in the credit department are a source of bewilderment to the salesman, at times cold and clear, followed by warm and gentle showers, interspersed with thunder storms, after which the weather will be changeable, with heavy and killing frosts. These climatic conditions often prevent a cordial interest in the work of the credit man from taking root.

Prejudice often stands in the way of right relations. Although his example is to be emulated, it is not given to everyone to rise to the heights of Lincoln, who called to his cabinet a man who had publicly insulted him, and appointed as Chief Justice another who spoke of him with habitual contempt.

So, too, egotism is sometimes an obstacle. You know it is hard to try conclusions with the egotist, wise in his own conceits, and always thrusting his pampered self between you and the subject.

It was said of one credit man, with something of irreverence, that he was in great trouble of mind. "What is the trouble?" was asked. "He is troubled to know whether God made him or he made God." But it was a salesman who, speaking to his Sunday-school class, said: "Dear children, the Lord who made the mountain, made the little blade of grass; the Lord who made the ocean, made the pebble on the shore; the Lord who made me, made a daisy."

Obedience to natural law is necessary to success, and leaning on universal principles we share their omnipotence. The Golden Rule should be the motto of every business establishment and of every labor organization; it contains the solvent of every public question; is the hope of the student of economics; the inspiration of the statesman; is the foundation of justice and fair dealing, and brings peace and good will to men.

Good will awakens enthusiasm, quickens faculty and promotes achievement. The majority of credit men and salesmen are honest, and their integrity is unquestioned; they mean to promote the interests of the business as much as in them lies. The salesman's enthusiasm sometimes gets the better of his judgment; the credit man decides according to his best lights—sometimes according to a bad liver.

As before intimated, there is a great power for expansion of business without increase of risk in the close and cordial co-operation of credit man and salesman.

It is stated that with no additional expense this co-operation means an increase in sales of not less than 10 per cent. In a business of \$1,000,000 this means an increase of \$100,000, at 15 per cent. profit, adding \$15,000 to the net earnings of the business.

A credit man may reduce his losses by bad debts to the minimum, and still be an unprofitable factor and positive detriment to a business if friction and antagonism exist between himself and the salesman.

Suggestions as to methods are scarcely needed. Where good will and sympathy exist and the co-operative and mutually helpful instinct is awakened, methods will suggest themselves, as may be best adapted to each particular line of business.

Some method should be persistently followed which will make habitual frequent correspondence and consultation with salesmen regarding risks and opportunities for doing business.

Letters appreciative and letters suggestive are trade winners and money savers.

Speaking of letters, it is the habit of many credit men to timely and appropriately express a sincere and hearty good will, and indicate a cordial interest in all that concerns a customer's welfare, and letters of congratulation, encouragement or sympathy are of frequent occurrence. This is a field which can be industriously cultivated to the great assistance of the salesman, and with profit to the business.

Recently a credit man heard of the death of a member of a firm, old customers of his house. Knowing that the relations of the partners were somewhat strained, he omitted the usual letter of condolence as being inappropriate. The wisdom of his action was justified upon the receipt of a letter from the surviving partner, which read: "You have no doubt heard of the death of my partner. I have been trying to get rid of that man for the past three years."

It is most important that the credit man should, in every case, back up the salesman, be well represented, or get another representative. Do not permit the customer to think your salesman does not possess the entire confidence of his employers.

The credit man will take advantage of every opportunity to show the customer that his business is appreciated. He will remember that it takes hard work and great expense to win a customer, and that a little want of tact, a little carelessness or indifference is all that is necessary to lose him. He will see that all dealings with the customer are transacted on a fair, just and equitable basis.

He will rely upon the salesman for much of the information necessary to come to an intelligent conclusion as to risks taken.

The salesman, while concentrated on the special work of selling, still absorbs a vast amount of information useful to the credit man, and his advice is invaluable as to condition of crops, resources of the country in which the customer is located, his opportunities for business, character, habits, ability and business methods; also, as to the value of his stock and manner in which it is kept.

No mercantile agency can give as good, as intelligent, as reliable, as fresh and late a report on these particular points as can be got from the salesman, and the records of a credit department are not complete without it.

A practical plan, and one which promotes business and encourages investigation by salesmen, is for the credit man to send out regularly a statement of the condition of each salesman's customers, accounts showing sales to date, as compared with same period in previous years, amount of indebtedness and amount past due. With such remarks and suggestions as may be necessary. This frequently saves time and expense in taking orders which would be declined, suggest more effort in quarters where business may be falling off, and investigation where account is past due or danger suspected.

To facilitate such a plan it is well to have each salesman's business kept in a separate section of the ledger. Many salesmen are good judges of credit and exercise great care and discrimination in taking orders. It is not by accident that they sell large quantities of goods year after year without losing a dollar. There is not a house in the country but has several men with such a record. This result is not entirely due to the good judgment of the credit man. It often happens that the first intimation of a

* An address by H. E. Hutchings, read before Credit Men and Salesmen at a banquet at the Coates House, Kansas City, Mo., September 30, 1899.

change for the worse in a customer's circumstances comes from the salesman. The condition of the account may not yet indicate it. The mercantile agencies' advance information often comes after the failure.

The salesman should be encouraged to improve his talents and opportunities for assisting in the work of the credit department. He should be regarded as the best and strongest ally of the credit man, and be treated accordingly.

He should be persuaded to solicit the business of prompt paying trade; should be convinced that prompt payments make room for more business, and be in hearty sympathy and accord with the credit man in making prompt collections.

Reasonable criticism on the part of the salesman is to be invited. Some highly successful houses call meetings of their salesmen periodically, in which they are requested to criticise the methods of the house, to point out where, in their judgment, improvements could be made to the better satisfaction of the trade and benefit of the business. Many important matters are exhaustively discussed, the house gets enlightenment, sometimes the salesman. The management is glad to avail itself of opportunity for progression and improvement. The salesman is a better, more willing and intelligent worker by reason of this consideration.

It has been well said that "he is my best friend who makes me do what I can." One of the largest houses of its kind in the world owes much of its success to its methods of dealing with salesmen. Its weekly letters are works of genius in awakening a pride in the business, in stimulating a generous rivalry, in causing its men to set for themselves high standards of achievement, to expect more of themselves than their house expects of them. Great is the power of good will, mighty the forces it sets in motion, liberal the dividends it yields to investors.

The chief business of life is the mastery of the art of living smoothly and justly with one's fellows; to acquire skill in calling out the best qualities of those about us; to be used by men and to use men, not by injuring or cheating them, but to promote ambitions and achieve the ends of business, advancing both one's self and one's fellows; this is life's task.

Advertisers' Corner.

It's well to give your rival your attention but give him no advertising.—*Boyce's Hustler*.

The advertisement that talks too much is apt to bore as readily as the man who has the same fault.—*Printers' Ink*.

Some one in your line will advertise to your consumers. In self-defense you must advertise to keep if not to increase your trade.—*Advertising Experience*.

Because an ad. doesn't bring in immediate results, don't discontinue it. Nothing is achieved in this world without persistence.—*Shoe and Leather Gazette*.

What does it profit an advertiser to get many replies and make few sales? The quality of replies is certainly of greater importance than the quantity.—*Advertising Experience*.

The advertising with the big hurrah brings many people once. The truthful, straightforward advertisement brings a few people—but they come again and again and bring their friends.—*Trade Register*.

A trade journal with a thousand subscribers often has a greater number of readers of the sort the advertiser wishes to appeal to than the daily papers circulating a hundred thousand copies.—*Printers' Ink*.

The wide-awake advertiser keeps track of what other fellows are doing in his line, but it does not necessarily follow that he immediately goes and does likewise.—*Agricultural Advertising, Chicago, Ill.*

An advertisement, to influence live, flesh-and-blood people, must have live, up-to-date matter in it. It has to influence people with practical common sense, so as a matter of fact it must be seriously practical itself.—*Trade Register*.

Considerable newspaper advertising is unprofitable on account of lack of proper distribution of the goods. In most cases they should be thoroughly distributed before talking to the public about them is begun.—*Printers' Ink*.

Advertising should be planned out on the presumption that it is going to be permanent—a necessary and invaluable part of the business. Too many men think of it as something apart from the business—a sort of galvanic battery to be applied at the discretion of the advertiser.—*Art in Advertising*.

A commercial advertisement in the sense the word advertisement is generally used, is a proposition to sell goods. Like all propositions, the success of it depends on the goods offered, and the manner in which the proposition is made. The more direct it is made, and the fuller and plainer the merits of the goods are given, the more successful will be the one making the offer.—*Butte (Mont.) Miner*.

If your firm name is one that can be easily remembered, by all means use it for the name of the store. Otherwise adopt an appropriate name—one that fits your business. Select a short and euphonious name. Do not call your store the "Leader" when you know that there is another store better entitled to it. But whatever name you choose to use, stick to it. If you give your store a different name than the firm name, use always the given name and not the firm name. It will confuse the public to try and have them remember more than one name of a store.—*Shoe Retailer*.

Let me tell you briefly my idea of a good "ad." First of all it must convey a definite message. It must be so plain that a little child can understand it. It must have an honest ring to it. It must sound true and reasonable. It must be worded in a manner that interests. If all these things can be combined, a desire for the article advertised will be created, and a sale will result. If the buyer finds the article approximately as good as the advertisement says it is, a second, a third, an indefinite number of purchases will result. What you say comes first of all; how to display the words and make them attractive comes next. A familiar quotation is good sometimes. A homely expression is good another time. There are times when ten words are abundant, and other times when a thousand words are too few. The object should be to convey a message that people ought to know, and when that message is completed it should stop right there. Knowing when to stop is really as much of an art as knowing how to begin.—*Bert M. Moses*.

The Abuse of Greases.

Tallow or grease of any kind should never be used on bearings unless it comes in direct contact with the shafting. Piling grease on the box of a vertical shaft, stuffing it in the oil holes, or in the recess around the oil holes, in the caps of horizontal shafting, is a delusion and a snare. Only the grease that comes in direct contact with the shaft will melt until shaft and bearings become so hot that damage is done. The person whose duty it is to look after the shafting will usually depend upon the grease doing the work that he should do with his oil can. More damage has been done to shafting and bearings by this practice than by any other known.—*Tradesman*.

NEW GOODS AND SPECIALTIES.

McPherson Paint Strainer.

Parks & Parks, Troy, N. Y., manufacturers of numerous specialties that are sold by the Hardware trade, are engaged in making the McPherson Paint Strainer, an illustration of which we give herewith. It is referred to as

being adapted for all kinds of paint straining, and is constructed in such a manner that it will not clog, too frequently the fault with strainers, to which improvement sufficient attention has not been given. It is specially constructed to reduce any lumps or dry pellets that may appear of ochre or mineral color from freshly mixed dry paints, and it is claimed to be equally as good for straining kalsomine. The makers make reference to its capability of straining more paint in five minutes than the ordinary workman could in several hours by old methods.

Federal Bench Punch.

Chandler & Farquhar, No. 36 Federal Street, Boston, Mass., are presenting to the Hardware and machine supply trade the Federal Bench Punch, which presents the appearance of being an exceedingly useful article for the

purpose. The device combines strength with simplicity, and is well adapted to all kinds of light punching. It weighs but 64 pounds, stands 10 inches high, is 10 inches long, and is furnished with a lever 24 inches long. It is calculated to punch a 5-16-inch hole through a $\frac{1}{8}$ -inch iron plate, $2\frac{1}{2}$ inches from the edge. It is exceedingly neat in appearance, strongly made and gives every indication of being durable. These qualities are characteristic of all the specialties manufactured by the makers of this punch. It is an appliance that is undoubtedly called for largely, and should meet with an extensive distribution.

Bathroom and Household Specialties.

The Searls Mfg. Co., Newark, N. J., are manufacturing a line of Bathroom and Household Specialties of solid cast brass and brass wire polished and heavily nickel-plated. They describe in their new catalogue which they have recently issued, a very complete line of these goods, and in addition to the regular line, such as towel-racks, combined

FIG. 1.

soap and sponge holders, brush and comb holders, etc., they are making a bath seat, an illustration of which we give herewith, Fig. 1. The seat itself is of white ivory finish, and is exceedingly novel and handsome in appearance. The size of the seat is $19 \times 6 \times \frac{7}{8}$ inches, and is held in position by curved arms of brass wire, five-sixteenths of an inch, which are partially covered with rubber, to protect the edge of the tub. They can be moved forward or backward for different-sized tubs, and can be folded up so as to occupy little space when not in use. Another novelty which is meeting with considerable popularity is a brass

FIG. 2.

towel bar, Fig. 2. This bar is made of hard brass three-quarters of an inch in diameter, the distance from the wall being three inches. The bar is made in two lengths, 24 and 30 inches long, and held in position by heavy, substantial nickel-plated brass sockets. The bar is of annealed brass, very strong and the contrast with the nickel sockets is very pleasing. Fig. 3 shows a tooth-brush holder, nickel-plated on cast brass, which is $2\frac{1}{2}$ inches by 4 inches in diameter, having receptacles for six brushes, the lower plate being pivoted so that it can be readily revolved.

FIG. 3.

These would seem to be popular specialties for the trade, and well worthy of their attention.

The Hayne Suspended Ink-Well

The Universal Specialty Co., Pike Station, N. H., and No. 151 Chambers Street, New York, are now offering the Hayne Suspended Ink-Well for use on the upright desk of book-keepers. In a recent number of *Hardware* we showed the ink-well sold by them, adapted for roll-top desks. This is designed especially for book-keepers' desks and those similar in shape and style, the ink-well being furnished

with special clips by which it can be attached to the racks of all standing desks. There are many advantages that may be claimed in using a suspended ink-well of this description, among which may be mentioned: The entire surface of the desk can be kept free from ink bottles, with all the ink, several kinds if so desired, confined to a compact, unused space, and always in one place, which eventually will be found a great convenience. Another advantage is that the construction of the ink bottles is such that there is

no evaporation, no accumulation of dust, and no possibility of overloading the pen with ink, which has the effect of avoiding all waste, and prevents to a great extent ink-stained fingers and blotted books. Each frame or basket is fitted with two flint-glass bottles, as well as sponge cup. If so desired, three ink bottles may be used, by substituting one of them for the sponge cup. The impossibility of upsetting the ink bottles or overloading the pen with ink is due, as explained by the manufacturers, to a rubber tube inserted in the mouth of the bottle, which insures a uniform, thorough inking of the pen, but makes it almost impossible to take up too much ink, or to soil the pen holder. It will be found a very useful addition to any such desk to which it is adapted.

Knock-Down Storage Tanks.

The American Steel Tank Co., Mishawaka, Ind., among their other productions, are building galvanized steel storage tanks in several shapes and sizes, that are claimed to be useful for all purposes to which tanks of any kind are adapted. They are the result of many years' careful re-

FIG. 1.

search and thorough testing of the different materials and various methods in construction. We will illustrate here-with a tank in its upright, natural position, and also one in its knock-down shape, showing how readily they can be taken apart and set up, and how great an advantage is this special feature. It can be made a great money-saver in freight charges, as all parts are fitted and plainly marked at the factory, and to set them up on receiving them, you have simply to place the side around the bottom and bolt together, and put the band and top rim in place and bolt

them. All styles and sizes of the American Storage Tanks, and they make quite a number of the same, can be shipped knock-down. The particular style shown in our illustrations is furnished in nine regular sizes, ranging in capacity from 41 to 180 barrels, and in dimensions from six feet in diameter and six feet in height to ten feet in diameter and ten feet in height. They also manufacture galvanized steel house tanks, made of No. 20 galvanized steel, and finished top and bottom in the strongest manner, with

FIG. 2.

side seams locked and riveted, the same as the storage tanks above illustrated, but with all seams and joints thoroughly soldered to make water tight; making a very heavy and much more durable tank than the common house tank frequently found in the market. These run in size from twenty inches in diameter, with a capacity of thirty gallons, to twenty-eight inches in diameter, with a capacity of seventy-four gallons.

"New Era" Radiators.

Wilmot Castle & Co., Rochester, N.Y., are placing upon the market and bringing before the Hardware and stove trade the very seasonable specialties, illustrations of which are given in this article. They are known as the New Era Radiators, and are manufactured in two forms, viz.: the square and cylindrical. The cuts give an idea of their general appearance. It is a well-known fact that a large percentage of the heat from the domestic consumption of fuel passes out of the chimney instead of being radiated through the rooms of the house. This is a waste which these radiators are designed to save and utilize. They are intended to be fixed to a stove or furnace pipe, and being handsomely made and in complete proportions, they add extremely to the ornamental appearance of the room instead of detracting from it. The square style (Fig. 1) is 37 inches in height, with from five-inch to eight-inch collars in order to fit the various sizes of pipe, and is made in

FIG. 1.

FIG. 2.

either sheet steel or planished sheet iron. It is adapted for use on the floors above the stove or furnace, adding greatly to the economy of heat passing through such an apartment. The cylindrical style (Fig. 2) is to be used on the pipe in the same room with the stove, and is guaranteed by the manufacturers to double the heating capacity. It is twenty-eight inches in height, with a diameter of ten inches, and with size of collars ranging from five to six inches. Both styles are provided with handsome nickel heads and bases, if so desired, at slight additional cost.

RECENT TRADE PUBLICATIONS.

THE PIKE MFG. CO., Pike Station, N. H., are distributing a little pamphlet very useful in its nature, treating on the subject of "Oil-Stones: How to Select and Use Them." This is a very interesting little pamphlet, illustrated to some extent, in which instructions are given throughout as to the selection of good oil-stones, the various and principal oil-stones that are now upon the market, their different characteristics, so that one may be fully enlightened as to the desirability of each particular kind for the use designed, and it is remarkable how much information can be contained within so small a pamphlet, covering as it does but 24 pages. The writer goes back to the pre-historic past, covering the entire field connected with stones of every description, and eventually bringing us up to the present time, when the most useful applications are made for the use of these desirable appliances. This is accomplished in an extremely modest way, from the fact that there is nothing to indicate it is part and parcel of a system of advertising. Not even is the name of the company exploited in any part of it, so that the most conservative dealer in the United States will experience gratification in distributing the information, and find the results in the increased sales of this department. It is understood that the trade will be supplied without charge, with a sufficient quantity of this pamphlet for local use, as an edition sufficiently large has been printed with this object in view.

J. D. WARREN MFG. CO., Chicago, Ill., are distributing their circular, No. 38, which represents a supplemental catalogue, and shows in very elaborate and perfect form a full line of their screw and bolt cabinets, screw and carpenters' tool cases, with antique oak ornamental drawers, a line of oak front screw cases, having drawers with movable partitions and circular bottoms, which are practically for all kinds of small Hardware goods; also a line of bolt cabinets with tilting front that when raised slides back, making easy access to goods in each compartment, and the same is also shown in extension base. Their system of drawer cabinets for the complete furnishing and fitting of Hardware stock is also represented in this circular No. 38, which is printed on good paper, 9½x12 inches in size, and contains sixteen pages. Two very graphic illustrations are given among its contents, one of which is a photograph kindly furnished by a merchant showing the condition of stock "before" fitting with the Warren Patent fixtures, and the other illustration is from a photograph showing the same stock with sample back of Glass Front Drawer, as it appeared thirty days later arranged with the Warren Patent Shelving. The list of contents makes a very interesting exhibit of what might be accomplished in the way of making a Hardware store attractive.

ONEIDA COMMUNITY, LTD., Kenwood, Madison Co., New York, with branch office at Niagara Falls, N. Y., are distributing their catalogue for 1900 covering the line of Hardware specialties now manufactured by them, including traps, chains, snaps, etc., to which the contents of the catalogue are devoted. It is a pamphlet of upwards of 100 pages, is illustrated fully throughout, showing all the varieties of their Newhouse, Hawley & Norton and Victor traps, from the smaller sized rat or gopher trap up to the larger sized, or bear trap. In connection with these is also given the extensive variety of chains manufactured by this company, including halter, dog, coil and cow chains, etc., of various brands and styles. Included in the assortment

will be found hitching rings and post chains, the Dominion style cow ties, the Oneida forged steel snaps in a full line of the same, dog collars in large variety, and a line of aluminum and other spoons that have been a leading specialty with these manufacturers for a great many years.

THE PETERS CARTRIDGE CO., Cincinnati, Ohio, and No. 80 Chambers Street, New York, are sending the trade a little pamphlet of 64 pages, entitled "Hints on King's Semi-Smokeless Powder and Peters Cartridges." This is a very interesting little pamphlet, which takes the business of the King Powder Co. from its infancy and brings it up to date, going through the entire industry, giving points of interest, methods of application, degrees of success, and instructions in regard to methods of using everything in connection with their business. It will be found interesting to the reader, especially sportsmen, and will prove of considerable benefit to those in the trade. In connection with the same publication, we have a little pamphlet from the Peters Cartridge Co. entitled, "Talking Points for Salesmen of Peters Cartridges, as suggested by one of them who has traveled the country over in the interest of these goods, and has made a careful study of the subject at the works and in the field." This is a very interesting little booklet of 24 pages, and should be in the hands of every salesman handling these goods, as it gives them a class of information not likely to be found in any other shape, and one it would seem the manufacturers have taken considerable trouble to bring together.

AMERICAN TOOL CHEST CO., No. 200 West Houston Street, New York, are distributing to the trade their illustrated catalogue No. 19 of tool chests, which are adapted for the use of boys, youths, general house-keepers, carpenters, farmers, planters, railroads and mines, covering an extremely large variety of these useful specialties that are fitted up complete with a superior quality of tools. They also manufacture empty tool chests for machinists and pipe-fitters' use. This is a business that has grown within the last ten years to large proportions, and to-day a suitable chest for every possible use can be found in the stock of the Hardware dealer making a specialty of this class of goods. The catalogue is a well illustrated pamphlet of 48 pages, and is doubly important by being neatly printed on good paper, and well worthy of being preserved.

ARCHDEACON & CO., No. 100 Murray Street, New York, have just sent us their new illustrated catalogue covering a full line of the latest inventions in electrical novelties, including gramophones, graphophones, phonographs, kinetoscopes, cameras, polyphones, fan motors, bicycle sundries, acetylene lamps, Hardware novelties, and a wide variety of electrical novelties, representing a new line of business in the way of salable specialties that are quickly meeting the approval of the up-to-date Hardware dealer, who desires to keep in stock the latest inventions possessing novelty. As these goods are not too frequently described in catalogue form, it makes this catalogue worthy of being sent for by the up-to-date Hardwareman.

BEVIN BROS. MFG. CO., East Hampton, Conn., are sending the trade their illustrated catalogue and price-list No. 70, of Bells for Hardware and saddlery trade. It forms a pamphlet of over a hundred pages devoted to their extensive line of bells, including hand, alarm, call, sleigh, cow and ship bells, etc.

MARLIN FIRE ARMS CO., New Haven, Conn., are distributing to the trade a very neat and important catalogue of 124 pages, printed in good style, and well illustrated, showing their complete line of firearms, consisting of the Marlin Repeating rifles, carbines, muskets and shot-guns, the catalogue being arranged in three sections. Part I. is designed for quick reference of dealers and consumers who desire briefly the details of their arms; Part II. being intended for the consumer who wishes more complete information in regard to the arms and the ammunition used in them, so that by careful reading a novice may form a correct decision as to which arm will best suit his individual wants and desires, while Part III. gives some hints that should interest and possibly help shooters in general. The manufacturers are pleased to state that any points not covered in this little book they will be glad to answer at any time to the best of their ability on application, stating also that all correspondence reaching them will always have prompt and careful consideration. It is certainly a very interesting catalogue, covering this line of goods, and might be read with interest and instruction by others than the amateur sportsman for whose benefit many of the details have evidently been prepared.

THE CORTLAND SPECIALTY CO., Cortland, N. Y., manufacturers of special forgings, carriage trimmings and Hardware, have recently issued their Fall catalogue No. 1, consisting of a pamphlet of twenty-four pages, in which is given a variety of carriage Hardware such as back irons, seat handles, arm rails, extension-top body irons, fender irons, knob eyelets, curtain strap fasteners, top props, concealed joints, etc., etc., together with a line of carriage knobs, buggy top springs, etc.

National Hardware Association.

Considerable change has been made in the programme for the entertainment of the National Hardware Association at Pittsburgh, on November 15th, 16th and 17th. The banquet which was originally planned to be given by the Association at the Monongahela House has been superseded by a banquet which it is the intention of the Pittsburgh manufacturers to give to the National Hardware Association as their guests at the Hotel Schenley on Friday evening, the 17th. The Smoker which was on the programme to be given at the Monongahela House Wednesday evening, November 15th, has been abandoned, and in place of it, it is the intention to give a Reception to members of the Association, and visiting manufacturers at the Duquesne Club on Wednesday evening, November 15th. The manufacturers have felt that many of the largest Hardware concerns throughout the country that have been purchasing their supplies from Pittsburgh for a long time have never had the opportunity of meeting in fellowship with the heads of such firms as the leading concerns in Pittsburgh—the Carnegie Steel Co., the Oliver Iron & Steel Co., Jones & Laughlins, and others, so it was desired that the leading members of these large firms should have an opportunity of their own to come together. It is their intention to tender this reception, and a better feeling of acquaintance will be inaugurated that will be appreciated by all those attending the reception. As there will be no set speeches of any moment, a collation or light lunch will be served, and the remainder of the evening will be spent in social intercourse that will improve the acquaintance so enjoyably commenced.

It is on the programme that on Thursday evening, November 16th, a special train will leave either on the Baltimore & Ohio or the Pennsylvania railroad for Bessemer, where the Association and other guests will have an opportunity given them to visit the immense establishments covering rail mills and blast furnaces of the Edgar Thomson Steel Works. This being accomplished at night, will make the

visit extremely interesting, and leaving an impression that will never be forgotten. This is the largest and most extensive rail mill in the country, and there is scarcely a doubt that a large number of the National Hardware Association have never had a first class opportunity to see the process of rail manufacture which is shown in this immense plant from the pig iron to the finished product in successive operations. The visit will no doubt prove an instructive one, and cannot be otherwise than enjoyable to those participating.

The reception committee, already appointed by the Pittsburgh manufacturers, is as follows:

Henry B. Lupton, chairman; American Steel & Wire Co.
George T. Oliver; Oliver & Snyder Steel Co.
Willis L. King; Jones & Laughlins, Ltd.
Albert M. Crane; American Steel & Wire Co.
Homer J. Lindsay; Carnegie Steel Co., Ltd.
John A. Sutton; Park Steel Co.
Joseph R. Dilworth; Dilworth, Porter & Co., Ltd.
Wallace H. Rowe; American Steel & Wire Co.
Chas. L. Gilpin; W. Dewees Wood Co.
W. B. Rhodes; National Tube Co.
Thos. W. Smith; Pittsburgh Screw & Bolt Co.
C. C. Briggs; Jones & Loughlins, Ltd.
A. M. Byers, Jr.; A. M. Byers & Co.
George V. Willson; Hussey, Binns & Co.
Frank W. Severance; Samuel Severance.
W. C. Cronmeyer; American Tin Plate Co.
Chas. A. Painter; American Steel Hoop Co.
H. E. Tener, Jr.; Carnegie Steel Co., Ltd.
T. Howe Childs; Howe, Brown & Co., Ltd.
Wm. C. McMahon; Oliver Iron & Steel Co.
Joseph L. Cooper; J. C. Russell Shovel Co.
George S. Garritt; National Tube Co.
S. A. Rankin; Hubbard & Co.
F. I. Illenberger; American Steel Hoop Co.
Frank C. Neale; Carnegie Steel Co., Ltd.

The Wednesday morning and Thursday afternoon sessions of the Convention it is intended shall be open and informal, in order that the manufacturers and other visitors, and also members of the press can participate in the proceedings. It is on the cards that an active participation will take place in a discussion upon the subject of "These Changed Conditions: Are they likely to be Permanent?" in which the members and others present will have an opportunity of ventilating their views, and no doubt arriving at a satisfactory decision.

The attendance of outside members at this Pittsburgh convention it is believed will be very much more general than has ever been the case. The hotel accommodations of the city will be taxed to the utmost, having already been largely sought, and giving the committee ample employment in locating those who are interested largely in making the convention a success. The various jobbers are working very hard to make Pittsburgh the most perfect place for holding a convention of this description, and have every reason to believe that the National Hardware Association will have one of the pleasantest times in their history, and will always be ready to repeat and indorse the proposition of making Pittsburgh a place of meeting.

Railroad accommodations have been secured by which the railroad companies will return all delegates and visitors to their homes for one third of the fare paid in coming to the convention, but in order to obtain this rebate, it is necessary that certificates shall be obtained at the time of the purchase of the railroad ticket, which certificate is presented to receive the return ticket at the reduced rate. As it is necessary to have one hundred of these tickets presented to the railroad commissioner before the reduced rate becomes operative, it is hoped that all the delegates and visitors will take note of this fact, and obtain these important certificates.

REVIEW OF THE MARKETS.

Hardware: The tone of the markets continues firm and with an underlying strength that lessens fear for any slump conditions in the immediate future. Stocks are being kept on a good average on seasonable goods, as it is felt the trade will keep in a satisfactory state until the dawn of 1900. The changes that are taking place are all of an upward character.

Wire Nails: No change in price has been made in the market on this staple since the quotation of 17th ult. announced in our previous issue. It is supposed that present prices may last the season out, which would prove satisfactory to the trade generally. Demand is a satisfactory one and deliveries fairly prompt, present quotations being as follows, f. o. b. Pittsburgh, terms 30 days net:

To jobbers in carload lots.....	\$2 95
To " in less than carload lots.....	2.07½
To retailers in carload lots.....	3 10
To " in less than carload lots.....	3.20

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock.....	\$3.25
" less than carloads on dock.....	\$3.40
Small lots from store.....	\$3.40 to 3.55

Cut Nails: The Cut Nail market remains in a normal state, without change of price. A fair demand is noted, orders being apparently with a view of averaging up regular stocks. The following quotations representing the present state of the market, are f. o. b. Pittsburgh, the freight being added to make a net price delivered at destination:

To jobbers in carload lots.....	\$2 60
To " in less than carload lots.....	2.65
To retailers in carload lots.....	2 70
To " in less than carload lots.....	2.85

New York business continues in fair volume with prices named as follows:

Carload lots on dock.....	\$2 75
Small lots from store.....	\$2.90

Barb Wire: The advanced prices announced in our previous issue on this important line are well sustained under a good demand, showing considerable confidence in the trend of the market. The following quotations represent the market, and are f. o. b. Pittsburgh, net cash, thirty days:

To jobbers in carload lots, Painted.....	\$3.40
" Galvanized.....	3.55
" in less than carload lots, Painted.....	3.42½
" Galvanized.....	3.57½
To retailers in carload lots, Painted.....	3.55
" Galvanized.....	3 70
" in less than carload lots, Painted.....	3.65
" Galvanized.....	3 80

Smooth Wire: No recent changes are noted in the market for this staple. Demand continues in an unusually encouraging condition. Shipments are better, and less delay is experienced. Export demand is particularly good. Prices are as follows, f. o. b. Pittsburgh, 30 days net cash:

To jobbers in carload lots.....	\$2.80
" in less than carload lots.....	2.82½
To retailers in carload lots.....	2.95
" in less than carload lots.....	3.05

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

American Tool Chest Co.: American Tool Chest Co., No. 200 West Houston Street, New York, have issued their new catalogue, No. 19, which we notice in another column. The discount sheet is as follows, terms thirty days net, or 2 per cent. discount for cash in ten days:

TOOL CHESTS, COMPLETE WITH TOOLS.

	Discount, per cent.
Boys' Chests, Nos. 55 to 6½, inclusive.....	50
Youths' Chests, Nos. 2A, 1A to 4 inclusive.....	40
Gentlemen's Chests, Nos. 4½ to 6½, inclusive.....	30
Farmers' Planters', Railroads, Mines and Carpenters' Chests, Nos. 7 to 13, inclusive.....	20
Housekeepers' Chests, Nos. 550 and 750, inclusive.....	50
Gentlemen's Chests, No. 400, and Gentlemen's Chest with Drawer No. 500	50

Terms f. o. b. factory; Net 30 days; 1% 10 days.

Cordage: Manila and Sisal Rope are still held firmly at advanced prices. Quotations for carload lots are as follows, with an advance of ¼ cent in less quantity, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....	per pound, 15 cents.
" ¾ inch.....	15½
" ½ and 5-16 inch.....	16
Sisal, 7-16 inch and larger.....	10½
" ¾ inch.....	11
" ½ and 5-16 inch.....	11½
" Lath Yarn.....	10

Manila Tarred Rope, 15 thread is quoted at 14 cents, and Manila Hay Rope, medium, at 15 cents. "A" grade of Jute Rope is quoted at 6½ cents and "C" grade at 6 cents. Jute Wool Twine, 4-ply only, per pound, 6½ cents; all other sizes 7 cents.

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels.....	47 cents per gallon.
In lots of 5 barrels or more.....	46 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

Files: Another advance in price of files has taken place, making necessary the adoption of a new price list, which we give herewith. This was done in order not to disturb the prevailing rates of discounts, which apply to the latest price list, the same as to those previously in use. This change in price embraces the 10 per cent. advance on list of June 1st, which advance has been in use by the File manufacturers since August 23d, as stated in the following announcement to the trade made by all the makers in common:

We send you herewith the Price List adopted by the File Manufacturers' Association of the United States, to go into effect on this date as its uniform list prices for all Files and Rasps named therein.

The present discounts will apply to this new list, subject, however, to change without notice.

The ten (10) per cent. advance on list of June 1, 1899, as

per our circular of August 23, 1899, will not apply to this list.

The continued scarcity of raw material and great increase in cost of the same and the unsatisfactory prospect of improvement in this respect, should impress the trade with the fact that a wise business policy calls for the realization of this advance on stocks in their hands, rather than to part with them at concessions in price, when the ability to replace them is uncertain. THE ARCADE FILE WORKS,

New

Game traps, sleigh bells, skates, sleighs, snowball shoes, and also goods for Thanksgiving and holidays are being purchased by dealers who are desirous of keeping their stock in condition for the near future.

The coming Hardware Convention at Pittsburgh is absorbing the attention of most jobbers who are endeavoring to arrange for attendance at this most important meeting. Pittsburgh, the great iron and heavy Hardware centre, will be visited during the time of its greatest prosperity and the meeting of large jobbers and manufacturers under such conditions will be naturally of great interest. Dealers in this immediate section are looking forward to the close of navigation which, no doubt, will occur within the next month, and in the meantime many goods are being ordered forward in anticipation of the advance in freight rates which occurs when cold weather sets in.

Election, with its usual commotion will to a certain extent destroy the regular routine of business but this will soon be over and prices and goods will be talked about rather than politics.

The condition of the collection department is improving. Quicker responses are being made by dealers greatly to the satisfaction of the jobbing trade.

ALBANY HARDWARE & IRON CO.

THE PORTLAND TRADE.

Fall trade is holding up to a much larger volume than at the corresponding time last season. The impression seems to be gradually becoming fixed in the minds of the retail trade, that the present prices have come to stay for a long time.

We are sorry to see the manufacturers of pig iron again advance their prices, but we think perhaps it was done more in self defense than for any other reason, expecting thereby to shut off some of the orders that are being rushed in upon them. We do not think this will operate seriously, but we would have preferred that pig iron should have stayed at the prices ruling a week ago, as we at that time supposed they had reached a level that could be maintained for some time.

Goods for Spring delivery seem to be in great demand and many of the manufacturers have placed their entire output and are turning down orders. This is a very healthy indication, and argues well for stability in prices through the coming season. Many of the manufacturers who depend on water power, are complaining that they cannot run full time on account of the low condition of the rivers. This of course curtails their output and strengthens the market.

There is no question but goods bought to-day will, as a general thing, be a good investment for those looking to their Spring wants. We find the retailers more ready than usual to place their orders in advance for Spring delivery. Many of them, however, are taking the goods in stock, fearing that they will not get them when they want them in the Spring. We trust the retailers will realize that they should add the full advance to any goods they have on hand as their next purchase will require more money than their last, and unless they get their advances they will not be in a position to carry their usual stock unless their capital is much larger than the average trader's.

We are pleased to notice a growing confidence and feeling of good will between jobbers and their customers, and a more charitable feeling between the jobbers themselves. Their interests are mutual, and they are realizing it more and more each year.

Collections are very good.

THE EMERY-WATERHOUSE CO.

THE BOSTON TRADE.

Trade still continues active and the month of October shows an increase both in values and quantities. There seems to be a falling off in certain lines but this is made up

in the demand for seasonable goods and we expect to note the same increase for November as in past months.

Advances do not come as rapidly as formerly and we doubt if we shall see many more changes before the new year.

Combinations among manufacturers are as popular as ever and suggestions in this line seem all that is necessary to secure harmony among competitors. Everybody seems confident that the present values will hold during the Winter and Spring season and there is already an active demand for Spring goods, orders for which are being placed for future delivery.

FRYE, PHIPPS & CO.

THE BALTIMORE TRADE.

The effect upon merchants of inflated values in manufactured goods is very pronounced, and as jobbers situated in a city which commands a large share of the Southern and nearby trade, we are naturally in close touch with same and note its pulsations with vital interest. The control, through concentration of capital, of the leading metals used in the manufacture of Hardware, as well as a large number of leading manufactured goods, followed by frequent advances rising from a low vale to near the summit of mountainous heights, we feel, like many of our friends, that when the top is reached it will be found rounding to a precipitate fall.

An advance in one line steadies that in another, assists a third and so on which, coming at short intervals, encourages large purchases and strengthens the nerve, if not the opinion of the average buyer, in a limited stability of the market.

Farmers having had two prosperous years in succession have been enabled to make improvements and supply their general wants, and have done so with noticeable eagerness and in many cases over-abundance.

The retailer and jobber are both carrying too much stock, and it is only plausible to suppose that, unless foreign demand can keep in operation the many large manufacturing plants in this country, that a reaction will occur, prices will weaken and tumble and a few air castles fall upon the rocks. Supply and demand, the oft repeated phrase, control the situation, and as there appears to be increased activity in the former, with corresponding lessening of the latter, we might pause for reflection.

Under present conditions a merchant of small means is unable to carry a large stock and pay his bills promptly. Not only does it now take at least 50 per cent. more money than it did last year to carry the same stock, but in selling on time and repurchasing he is increasing his obligations and risks to greater extent than formerly in proportion to the increased value of the goods handled.

Our sales for the past ten months have exceeded in value the largest annual sales we have previously made and the volume of goods on hand the first of this month is far in excess of what we have ever had at this time of the year—which stock fortunately is paid for, but which we are more than anxious to dispose of at present prices.

We notice there are other jobbers similarly fixed, and also learn through our traveling men of numerous instances of market prices being similarly cut.

If, in our judgment, it is necessary to meet the cut prices made by a competitor to secure an order, and we want it, we will do so every time.

The strictly one price idea is very pretty in theory, but where competition is keen it has not been demonstrated as yet to us that it is always practicable.

As we pay for the goods we purchase, have no protection from manufacturers in the event of decline and must stand all losses occasioned thereby, we feel at liberty to do as we please with them, whilst endeavoring at all times to get standard prices.

The tendency of manufacturers towards discontinuance of cash discounts operates another hardship upon the job-

ber, which, taken in connection with additional charge for less than carload shipments on account contracts for more than carload quantities, terms strictly 30 days, specifications accompanying orders and very short time allowance for delivery, places the jobber in an unenviable position, as he is at present forced to sell goods on 60 days' time with 2 per cent. cash discount and get his money when he can, he is granted a protection of less than 10 per cent. in price when it costs him nearly 15 per cent. to do business; and is now unable to place orders for Spring goods with delivery to his customer when the trade opens, as has always been customary.

Freight allowances on many goods have been stopped or equalized with nearest factory, causing thereby a discrimination against Baltimore in favor of Philadelphia on all such goods as are manufactured in the latter city.

Great credit is due the few manufacturers who have remained conservative, under the alluring opportunities which they have had to squeeze unjustly high prices from their customers, and their good deeds will be long remembered.

The jobbers, unlike certain manufacturers, find it necessary to handle their trade with liberality and tenderness, because there are other jobbers who handle possibly the same class of goods and can sell them just as low as the other fellow. Heavy Fall business is now over in this section, but many small orders are coming in and keep us stirring. Collections are falling off in certain parts of our territory, while in others they are exceedingly good, due to agricultural conditions mainly. So far but few failures reported.

H. W. WEBB & SONS.

THE CLEVELAND TRADE.

The advance in the price of goods considered in relation to the money market, has more importance than has been given to it. The increase in the cost of stocks in the steel and iron industry is more than seventy-five per cent. over what they were a year ago. This, with the great increase in all other lines will require a large increase of capital if business is to be kept on a healthy basis.

In addition to this increase in price, terms are being rapidly changed from 60 to 30 days, making a necessity of increased circulation.

It is good politics, and good business, to provide that circulation keep pace with the demand, and business men should urge Congress to make early provisions for expansion.

Dear money makes cheap goods, and declining values—hard times. We have not yet experienced the full effect of these advances on the money market and will not before the first quarter of the year, because a large proportion of the business has been done on old contracts at low prices.

Business men are sure to need more accommodations and this will affect bank reserves and seriously interfere with the prosperity of the country, unless early provision is made to increase circulation. The unusual change in the condition demands prompt recognition or prosperity will collapse.

The Bankers' Convention seems to have overlooked this phase of the question. They may profit by a close money market; but the rest of the people will suffer.

The boom continues. It is impossible to keep stocks complete. The demand from the retailers for prompt and complete shipment is much more imperative than usual, keeping the jobber who must wait on the manufacturer full of perplexity.

Many September shipments are yet to be made; orders for prompt shipment for Spring goods are frequent, and prices for next Fall shipment constantly solicited.

The question of changing terms by Hardware jobbers from 60 days, 2 off 10 days, to 30 days net, is being discussed. The old terms have prevailed so long, that it

seems like revolution to change them, but evolution usually ends in this way.

So many manufacturers have adopted 30 days net that a large proportion of the jobber's stock must be purchased in that way. Unless manufacturers recede from these terms, which is not probable, jobbers must change theirs.

Jobbers would prefer to offer a discount for prompt payment and it has been suggested that they make their terms 30 days, 1 off. It is perfectly manifest that they cannot afford to allow 2 per cent. on goods for which they pay net cash. They may decide to make net prices on goods they purchase that way and still allow the old terms on the balance of their stock.

When this matter is settled by jobbers, it will begin to be discussed by the retailers. The long-time credits they have given must of necessity be shortened to make it work smoothly. If they can do this and have the new plan inaugurated, it will prove a great advantage to business.

Panics breed on over-credits, and it will prove a sanitary measure against disease in business. Merchants will then be compelled to do business on their own capital and must limit expansion to the capital they control. This would greatly curtail losses in business.

If we are forced to make this change, it will be in the direction of safer business; what seems now like an evil, will prove a good, and so an undiscovered better will harry us out of past conditions, and this seems to be the regular method of evolution.

High prices seem to increase rather than to hinder sales. Nobody now anticipates any early declines, but are more anxious to get the goods than they are about the prices.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE COLUMBUS TRADE.

We have no fault to find with the volume of business. We are kept busy all the time, and we see no signs of dropping off in trade, and do not expect it as long as good weather continues, and cold weather means a demand for Winter goods that will make up for any decrease in the demand for builders' Hardware; so we do not look for any dull time during 1899. We think it will close as a record-breaker in the Hardware line as well as almost any other branch of trade. There is no indication of lower prices. On the other hand, we are continually being advised to look out for higher prices on a great many articles the first of the year. We trust that manufacturers will be conservative in making advances. We cannot help thinking that many mistakes have been made in some lines that will have to be corrected before many months. That many goods are too high no one can well deny, and on the first signs of a decline there will be trouble. We would like to see reasonable prices and have a steady market for several years, but that is not the history of American manufacturers. It must be either a feast or a famine. We have had a famine, and now the manufacturers are having a feast. The question is: How long will it be before the next famine begins? We hope and believe that it is a good while ahead of us; but it will be hastened by making unreasonable advances. We wonder sometimes what Hardware dealers are thinking about when they sell goods for less than they can be replaced for. But this is being done every day by both jobbers and retailers. We have complaints sometimes from customers that we have overcharged them on certain articles. We know other jobbers receive similar complaints. The question is: What is an overcharge? Manufacturers are the first people to make the price, and merchants should base their prices on the manufacturers' prices; but it is not done at present. One dealer has a good stock, and he bases his selling price on his cost price. If he had goods enough to last him indefinitely it might do, but if he has trade he is bound to run out of goods. Then he replenishes his stock at a higher price than he sold for and is loser. We

have an article in mind now that has been worth 90 cents in full car lots, 92 cents in 20 dozen lots and \$1 in less quantity that is being sold by one jobber that we know of at 80 cents. Now if one jobber charges \$1, which would be as close as he could afford to sell for, would he be overcharging? We think not, as \$1 is the price and 80 cents is a bait price for other business. We mention this to show on what grounds many claims are now being made for overcharges. There are many articles sold the same way. It makes it very unsatisfactory, and these dealers who are using some article for an advertisement are following the department store tactics.

There is only one right way to sell goods, and that is to keep with the market. We have tried to find out why the file manufacturers did not change their discount 10 per cent. instead of making a new list. If they cannot make a list that will last more than five months they had better adopt net prices. It is a puzzle to know what has become of some lines of goods. For instance, horse shoes. Some manufacturers refuse to quote a price at all, saying they are sold up to the first of the year. This surely indicates that the horse is still "in it," even if we have electric buggies and drays.

The question of terms is one of great importance just now, and it is a foregone conclusion that jobbers and retailers will have to limit their time of credit unless the manufacturers change their policy. We are opposed to the net cash thirty day terms. We maintain that everyone who pays for his goods within ten days is entitled to a cash discount. We are in favor of "30 days 2 per cent. cash ten days." Every jobber knows that a large percentage of dealers who do not discount their bills do not pay promptly in sixty days, but it is seventy or ninety days and even four months. If the thirty day net system is adopted we are well satisfied that it means forty or sixty days with all, while, if there is an inducement to pay cash, a great many will avail themselves of the two per cent. Manufacturers who sell to large dealers can insist on prompt payments, but the jobber cannot be so independent. "There are others, you know." The jobber cannot buy Black Diamond files, Atkins saws or Shoenberger shoes from anyone but the manufacturers of the different articles, hence he must pay promptly; but the retailer can buy any of the articles from a score or more jobbers. If one jobber insists on having his pay in thirty days, the retailer has a number of others he can draw supplies from. The jobber will be the greatest sufferer under such an arrangement as thirty days net. We hope the manufacturers will allow a cash discount, and believe they will find it to their interest to do so.

THE SMITH BROS. HARDWARE CO.

THE PITTSBURGH TRADE.

Trade continues quite active, especially in towns where manufacturers are located, though farming districts also are doing a good business. The quantity of goods handled this year would have surprised us a few years ago, but as business expands our ideas grow and plans for quick handling are invented.

Mention was made in this letter a few weeks since of the early necessity for a change in terms of sale by jobbers, in view of the change to thirty days net, which has been so generally adopted by the larger manufacturers. The question will no doubt be one of the most important to be discussed by the Convention of Hardware Jobbers, to meet in our city on the 15th instant.

Theoretically the 2 per cent. cash discount is offered to induce slow paying customers to anticipate payment; practically it does nothing of the sort. The slow payers do not take it, but instead take all the time possible, only paying after draft has been made and returned, and numerous letters more or less urgent have been written, running out to one, two or three months past due.

The stronger class of retailers take advantage of the 2

per cent., and as the jobber got it he was able to give it. Now things are changed, and if we continue to give 2 per cent. it is just that much out of our profit, and under usual conditions it would be impossible to spare this percentage of our small margin.

The old terms have become so firmly established that it will be hard to make the change to thirty days net, but as the manufacturers have taken the initiative we believe united action upon the part of the jobber will overcome that difficulty.

A more serious difficulty is the lack of capital and therefore inability to pay in short time, on the part of a very large class of merchants. These people never go into bank for accommodations, but expect the jobber to carry them until their collections enable them to pay; they did not pay promptly on sixty days' time, and it will be no better under the new terms. The remedy would be for them to sell for cash or short time, but this is such a revolution for the country districts that it will take a long time to accomplish.

Meanwhile the result will be that the jobber will have to carry a large portion of his customers, as he has done, for thirty days to four months over time, and probably for larger amounts than formerly because of the increased value of goods.

If this is a correct diagnosis, some remedy must be adopted to preserve a reasonable profit to the jobber. With the 2 per cent. gone he must have a better margin than heretofore to replace it, and on overdue accounts he should have interest for the extra time taken.

While times are good we can more easily make the change than during a depression, and when made it will be for the best interests of all, and a great safeguard against overtrading and failures. LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

Prices are higher, many lines of goods are difficult to obtain, stocks are lighter, money more plenty, collections better, trade good, weather delightful, corn harvest in full blast, politics ditto.

For every political, financial or commercial proposition there seems to be an anti, auntie, or ante. The limit will be reached next Tuesday, and as far as Iowa is concerned, every ante, no matter how you spell it, will be called in and retired just as other anti-progressive efforts have been many times before.

By the time the next issue of *Hardware* reaches a majority of Western towns, a great number of Hardwaremen will be in Pittsburgh attending the annual convention of the National Hardware Association. This writer expects to be there and hopes to learn how it is profitable to the jobber to pay a high price for packing and carting everything he buys and then furnish same free to customers, and how it shall profit a man if he pays net cash for goods and lose two or three per cent. thereon in way of cash discounts, and what he will gain if he receives pay in local checks, expensive to collect and pay obligations in New York exchange. How to make money in selling scythes at twenty five cents per dozen profit, and steel goods on a margin of three per cent. He expects to learn a great deal, meet many old friends and make new acquaintances, and to have an all-around good time generally.

SICKELS, PRESTON & NUTTING CO.

THE CHICAGO TRADE.

There have been a few changes in the prices of shelf goods since our last letter. The most important of them has been advances in the price of McMullen's fencing and gates; Henley Fencing and gates; cast butts; steel cut nails; Snell car bits and ship augers. An advance of fifteen cents a hundred pounds on all kinds of plain and galvanized annealed wire, also barbed wire and wire nails; also an advance in all sizes of "Elgin" can stock, "Iowa" can stock and "Farmers" can stock and cans; also an

advance of nearly twenty per cent. on common auger bits and the Wells & Nellegar Jennings pattern bits. An advance of $12\frac{1}{2}$ per cent. on all table cutlery. A new advanced price on White Mountain and Arctic freezers. New lists on lag screws and machine bolts and a few other changes of minor importance. Notwithstanding the fact that steel goods, freezers and some other few goods have advanced, our men have experienced no difficulty in securing much larger orders than they did for these same goods one year ago. A very important reason which our salesmen are able to give us for this state of affairs is because our line of customers were so well treated by our firm during the past nine months in the prompt shipments of their goods, when the majority of our competitors were unable to receive goods rapidly enough from the factories. The stock which our house has carried all through the present year has been so largely in excess of anything of any time in the past, and our anticipations early in the season of the probable wants of our customers were such that we have been able to give our trade good satisfaction throughout the entire season, and our present stock is now still so much in excess of our ordinary requirements, that we do not anticipate any difficulty whatever in being able to keep pace with the largely increased demand of our customers no matter how extensive they may be.

WELLS & NELLEGAR CO.

THE ST. PAUL TRADE.

Business in this part of the Northwest has, up to the present time, been very active. The near approach of Winter is hurrying up those who have not yet bought their goods needed to make the coming season comfortable for them, and consequently the retailer is much busier than he can expect to be some weeks later.

So far the weather here has been delightful—bright sunshine with a crisp, bracing air—and building operations are going on without interruption. The farmers have had an exceptionally favorable time to complete their Fall work, and the reports we receive from the "front" are that Fall plowing, threshing, etc., is generally well in hand. Prices of all farm products have been and are generally satisfactory to the producer. The voice of the calamity howler is still occasionally heard in the land, but his following is small and growing beautifully less.

We notice the question whether the present advanced prices of Hardware and of building material will restrict

building operations in the future is one that is attracting a great deal of attention. So far in this locality we have seen no evidences of its doing so. We can see that it might have such an effect on those who contemplate putting large sums of money into buildings for permanent investment, upon which they expect a permanent income; but with the farmers, the residents in country villages, and even residents in cities who are building for their own occupation, the rule is that when they feel they are able to make these improvements they do it. When times are hard and money scarce, we see but few buildings put up, although prices of material and labor may be ever so low, but when the opposite condition obtains then we see great activity. Unless there are strong indications of lower and weaker prices in the near future, we believe we will see more building the coming season than we have in the past. Those indications are not apparent as yet, and if the large manufacturers and the so-called "Trusts" do not attempt to force the market much beyond its present condition, we can see no reason why the business of the country will not adjust itself to the standard now established.

C. W. HACKETT HARDWARE CO.

THE SAGINAW TRADE.

Although the Indian Summer weather we have had during September has held trade back to some extent, the volume of business for the month was large. The trade seem anxious to buy for Spring wants which would naturally indicate that they had confidence in the market. While some prices are high, others, based on present cost of raw material, should be good property. The shortage of axes seems to grow more serious daily; it was predicted by many that the manufacturers would catch up with orders by this time, but they seem almost as hopelessly behind as ever. The present conditions lead us to feel that no weakness is to be looked for until Spring business is over, while some think December 1900 is as early as prices will begin to recede.

MORLEY BROTHERS.

THE OMAHA TRADE.

There is very little change of note in the existing condition of trade tributary to this point. The volume of business for the last month was possibly the largest that was ever handled by the jobbing houses here, not only in Hardware, but in all other lines. Complaint has been made by some houses that while the volume of their sales is in excess of a year ago, their tonnage is no larger, and in many

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. CUSHMAN & DENISON, Mfrs. 240-2 W. 234 St., N. Y.

STANLEY'S PATENT Roofing Bracket.

STANLEY

Rule & Level Co.
New Britain, Conn.

SOLD BY ALL
HARDWARE DEALERS.

The parts are of Spring Steel, firmly riveted together. Push the beveled ends up under two layers of shingles, already nailed down; the Bracket has two separate bearings on the roof, and is so formed that any increase of pressure from above, increases its stability. One dozen per minute can be placed in position, or removed; and great economy in lumber and nails will be found. There are no loose parts to get lost; and no nail-holes are made in the roof. In constant use these Brackets will last a life-time.
No. 1. Roofing Brackets, 8 inch, 1/2 dozen in box. Per Doz., \$3.00

cases considerably smaller, thus leaving the entire advance in business to be borne by advanced prices. But a comparison of our tonnage figures does not bear out this condition of affairs, as the average increase in tonnage for the past three months has been fully 25 per cent. The volume of trade shows no disposition whatever to diminish, and the demand for staple lines as well as a general assortment of goods throughout the catalogue is as strong and as active as ever. The purchasing power of the community has been largely increased by the fact of an enormous crop, and while grains are not yielding as large returns as farmers would be glad to see, cattle and hogs are bringing top-notch prices, and the people who drive their grain to market instead of hauling it in are making no complaint. If less talk were had about the advance in prices and more about the advance in the purchasing power of the community, there would be more trade and less complaint than now exists in regard to prices.

RECTOR & WILHELMY CO.

THE INDIANAPOLIS TRADE.

It has been a great source of satisfaction to us, during the past sixty days especially, to notice how nearly our buyers, in preparing for the Fall and Winter trade, were able to estimate the demand in various lines. With the exception possibly of axes and cross-cut saws, we have been able to fill orders for goods in largest demand with reasonable promptness, and complaints from customers regarding slow shipments of goods ordered ahead of the season have been comparatively few.

Trade on novelties, as they might be called, among which might be mentioned air rifles and iron express wagons, has been exceedingly good.

Our customers are purchasing freely for their wants next Spring, in spite of the fact that they are compelled to pay for them on the shorter terms now insisted upon by the manufacturers.

Our surplus stock in so many lines, purchased at the beginning of the year, is being rapidly reduced, and by

January 1st we hope to have our stock in about its normal condition.

As the year progresses we hear less complaints from our salesmen regarding the cutting of legitimate prices by their competitors. The questions most frequently asked by the dealer of our salesmen are: "Can you fill an order for these goods at once?" and "Are you sure you have plenty of the goods in stock?"

Sales in our gun department, compared with the same period in the past, are greater than in any previous year, and our customers' wants have never been so well cared for as this season. The increased demand for shotguns retailing at about \$25 is very apparent, and it is all we can do to get them fast enough. We have been able, however, so far to get enough each week to fill the back orders which have accumulated since the last shipment reached us.

VAN CAMP HARDWARE & IRON CO.

Help Wanted.

WANTED—for a retail house, a young man well posted in general Hardware; must be acquainted with Chicago trade. Address, with references, Room 61, No. 125 La Salle Street, Chicago, Ill. 83

WANTED—a young man able to sell builders' Hardware; figure on plans, etc. Must be acquainted with Chicago architects and contractors. Address, with references, Room 61, No. 125 La Salle Street, Chicago, Ill. 84

Situations Wanted.

POSITION as salesman, or in charge of men in works or outside. Understand foundry work, heating, ventilating and mechanical engineering; accurate at estimating, laying out work, improving and designing. Could take superintendence of works, or charge of any department. Good references, moderate salary. Address, E.D. HICKY, No. 106 East Sixty-First Street, New York. 81

A THOROUGHLY experienced and up-to-date builders' Hardware salesman, familiar with plans and specifications and estimating on same wishes good position with good house, where ability and character will be appreciated. The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

THE BIRMINGHAM TRADE.

We have been too busy of late to write letters. We are glad to report business good in all lines, running ahead of any period in the past. It appears that there is an active demand for pig iron at the present market prices, not only for present delivery, but for future delivery. This will indicate that we need not look for any downward turn in the market for some time to come, but rather that when the manufacturers begin to consume high-priced iron we may look for still further advances in many lines. It is possible that some of the manufacturers are still consuming low-priced iron on old contracts and have been giving the trade part of the benefit of this, which they cannot do when they begin the consumption of iron at the present market. Coal mines also seem to have plenty of orders. We hear them complaining of shortage in cars and that they are not able to get cars enough so as to supply all their trade. One of them reported that in an effort to get cars from the railroads the railroad official told him that they could only supply about 60 per cent. of the demand for cars. Possibly, if cars were plentiful and these supplies could be gotten to their destinations promptly, it would assist, in a large measure, to make the trade very much easier, as deliveries would be more prompt and the same want would not remain unsupplied so long.

High prices of pig iron and coal are stimulating the building of furnaces and the opening of new mines. This gives rise to a demand for additional machinery and supplies. It is reported that Mr. Harrison and associates have completed arrangements to build a furnace at Bessemer. The Tennessee Coal, Iron & Railroad Company are building furnace No. 5 at Ensley. It is also reported that the Republic Iron & Steel Company will build two more furnaces at Thomas. Sloss Iron & Steel Company are overhauling the Philadelphia Furnace at Florence, Ala., also the Hattie Ensley Furnace at Sheffield, Ala. Trussville Furnace, at Trussville, Ala., is almost ready to go into blast, and the old Williamson Iron Company furnace in Birmingham, we understand, will soon be overhauled. Also an additional furnace is being opened at Gadsden, Ala., and at Ironaton, Ala. Needless to say that while the high prices on pig iron continue every effort will be made to start up new furnaces, but it will be some time before all of them will be supplying pig iron for the market. It is possible that new ore mines will have to be opened and new coal mines in order to get supplies of coke and coal. These require considerable time, but when they are all running it is reasonable to expect that it will do much towards supplying the present hurried demand. We suppose what is taking place in this district is transpiring in the other parts of our country.

This leads us to the conclusion that when the present activity is over (as we all expect it will be some time in the

future) that our country will be in better shape than ever to go to the markets of the world with abundant supplies, ready to meet competition from any quarter. The building of new furnaces and opening of new mines naturally give rise to a good demand for builders' material, as the operators must have houses to live in, and these must be built. Altogether, we can report very satisfactory business. The chief obstacle in the way is in getting prompt deliveries of goods which are wanted with which to fill orders. Most all of the factories seem considerably behind and are not able to supply goods promptly.

MOORE & HANDLEY HARDWARE CO.

THE PHILADELPHIA TRADE.

The month of October just closed shows a gratifying increase over the volume of sales for the same month of last year, and it is hoped the advent of cold weather (which is reasonably to be expected with the Thanksgiving turkey) will further stimulate trade.

As for prices, there has been a decided stiffening in the market in the past two weeks, and if any hesitation or doubt existed before, it now seems a thing of the past, as the market has taken a firm tone and further prices are in prospect.

After all, outside of nails, wire and shovels, advances on many goods have been comparatively moderate and not sufficient to cover the increased cost of production, and in the present state of the material market, higher prices seem inevitable.

As we said in our last letter, it is earnestly to be hoped that the retail trade fully realize the importance of realizing new prices on the goods they are selling, as, otherwise, business on a rising market, which is apparently done at a profit, will actually turn out to be a loss.

A few days ago we had a visit from a large dealer who thanked us for our letter printed in *Hardware* a couple of weeks ago, in which we illustrated, by the price of nails, the danger of selling goods at present cost in the thought that a profit was being realized thereby. In that article we tried to make it clear that ten kegs of nails, for instance, giving a profit of \$1.50 a keg if they were sold at the present cost, did not actually net a profit for the reason the ten kegs required to replace them would cost the same figure.

We do not wish to be too insistent on this point, but we think it is absolutely essential that the trade should realize the necessity of making a profit on the present cost, as, otherwise, dealers may find themselves worse off, instead of better by reason of the advance in prices.

Manufacturers still report an enormous demand for goods and on many lines are still far behind on orders, while the general employment of labor, and the large amount of money now paid out weekly in wages, cannot fail to stimulate buying in manufacturing centres, and still larger trade may, therefore, be reasonably expected in the near future.

BIDDLE HARDWARE CO.

THE EVANS MFG. CO., owned and operated by the Gille Hardware & Iron Co., Kansas City, Mo., are distributing to the Hardware trade their general catalogue representing a line of pieced tinware, galvanized steel tanks, galvanized steel reservoirs and housefurnishing specialties manufactured by them, and in connection therewith also a complete line of supplies that they are jobbers of, including corrugated and sheet metal roofing, galvanized sheet iron and polished steel, etc. This is a very handy and useful catalogue, and is accompanied by a discount sheet giving prices for every page. It covers a vast variety of goods coming under the head of tinner's supplies and specialties for stove dealers, suitable for every Hardware store, from the smallest to the largest, and includes an extensive variety of Hardware specialties that will suggest themselves as being profitable additions to any Hardware stock in the country.

THE WORLD'S GREATEST FILE WORKS.

ESTABLISHED 1842.

"By their works ye shall know them."

PLANT OF THE ARCADE
FILE WORKS AT
ANDERSON, IND., U. S. A.

BACK of an Arcade File stands the most complete and modern file manufacturing establishment in the world, directed by master minds, originators of a distinctly improved product sold entirely on its merits, the modern plant insuring best quality. Back of an Arcade File stands this guarantee, "that an Arcade File will cut faster and wear longer than any other file made," and as an "earnest" of this guarantee, the Arcade File Works will send to any responsible Hardware Jobber, Wholesaler or Retailer, one dozen Arcade Files, to become the property of the receiver or returned at our expense if the guarantee is not fully borne out in every particular.

There are new points worth knowing about Files, and the best information is condensed into a neat little pocket volume which we will send free to readers of "Hardware" while they last. Ask for "Practical Talks on File Work," and perhaps you would like to know about prices.

RETAIL TRADE RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Bloomington, Ill.—Holder, Milner & Co.
Cleburne, Tex.—The Dickson Hardware & Furniture Co. has been incorporated by E. Dickson, F. D. Dickson, E. Jameson and others. Capital stock, \$25,000.

Hastings, Minn.—Turnbull & Devaney are new Hardware dealers.

Hearne, Texas.—The Adams Hardware & Implement Co.; A. W. and W. A. Wilkerson have purchased the stock of this company, and will continue the business under the firm name of Wilkerson Bros.

Montreal, Can.—Frankel Bros., metal dealers, new firm, have commenced business.

Sioux City, Ia.—J. F. Means has opened a Hardware store at No. 509 Pearl Street.

St. James, Minn.—Hall & Hall are new Hardware dealers.

St. Louis, Mo.—The South End Hardware Co. has been incorporated by C. Schweickardt, A. Holle, F. P. Preissle, J. F. Krieg, W. E. Fisse; Hardware business. Capital stock, \$3000.

Toronto, Can.—The Miller Hardware Specialty Co., Limited, capital \$25,000, in shares of \$5 each; head office, Toronto.

Changes and Improvements.

Alpena, Mich.—H. G. Beach, Hardware dealer, has leased the Donovan store adjoining his present place of business, and will occupy both with his stock of goods.

Arlington, Minn.—Nick Thomas is building an addition to the rear of his Hardware store. It is brick, 32x22 feet.

Beaver Creek, Minn.—Sage Bros. have disposed of their Hardware and harness business.

Branchport, N. Y.—Reaves & Huntley have rented the vacant store south of the drug store in the Weaver block. The store will be opened for business January 1, 1900. The firm will carry a general line of Hardware, agricultural implements and everything to be found in a first-class Hardware store.

Carthage, N. Y.—L. J. Vinier has purchased the Brown block in State Street and will remove his Hardware store and tin shop to that place.

Charleston, S. C.—H. M. Willcox has sold his store building adjoining the Merchants' and Farmers' Bank to Dr. J. C. Mace. Mr. Willcox has found it necessary to secure larger quarters for his Hardware business.

Deposit, N. Y.—Brokaw & Howell are building a store to be occupied by Frank Dunn's Hardware business.

Des Moines, Iowa.—Patrick & Luthe, the well-known Hardware jobbers, located at Third and Walnut Streets, are closing out their entire stock, and will discontinue the Hardware business in this city.

Emporior, Kan.—Haynes Brothers have carpenters at work shelving the third room which they recently purchased from R. D.

Thomas. With this room, Haynes Brothers will have one of the largest retail Hardware stores in the State.

Fremont, Neb.—J. McLean has purchased the retail Hardware business of John Clasen.

Georgetown, Texas.—Hodges & Hunt, agricultural implements, etc.; J. W. Hodges has sold his interest to his partner, H. H. Hunt.

Hazel Run, Minn.—W. C. Thompson & Co., Hardware and implement dealers, are erecting a new store building.

Holly, Mich.—Durdle & Adams, Hardware, have been succeeded by Benjamin Durdle & Co.

Hope, N. D.—George A. Luce, implement and Hardware dealer, has established a branch at Sherbrooke.

Indianapolis, Ind.—The Hardware firms of Charles Hildebrand and Charles L. Wayne, two of the largest in the city, were consolidated recently, and will do business hereafter as the Indianapolis Hardware Co., the new capital stock being \$100,000.

Jacksonville, Ill.—The Buell-Brady Hardware Co. have succeeded H. K. Buell, dealer in general Hardware, stoves, furnaces, etc. They are making a number of changes in the store.

Kasson, Minn.—L. Drew and C. Applin have purchased M. A. Race's Hardware store and will continue under the style of Drew & Applin.

Louisburg, Minn.—Anderson & Siverson, Hardware dealers, have dissolved partnership.

Marathon, Iowa.—J. W. Burnip & Co. have sold out to W. F. Couch, who is continuing at the old stand.

Mayville, N. D.—Olson & Walhus, Hardware dealers, will remove to Sheyenne.

Minneota, Minn.—Ferguson & Gewitz, Hardware dealers, are preparing to dissolve partnership.

Nelson, Minn.—H. C. Peterson, Hardware and implement dealer, has sold his implement stock.

Odessa, Minn.—Reuben D. Hill, Hardware dealer, has sold out to Zuiener Bros.

Purcell, I. T.—Little & Smith have dissolved partnership, and J. S. Little is successor under his own name.

Redwood Falls, Minn.—Schmahl & Jaehnigs, Hardware dealers, have moved into new quarters.

Rutland, Vt.—The firm of Pierce & Billings, No. 37 Center Street, dealers in Hardware and harnesses, has been dissolved. A. H. Pierce selling out his interest in the store to Seymour Billings, who will continue the business under his own name.

Salt Lake City, Utah.—A transaction of considerable magnitude is in process of consummation, whereby the large hardware house of the Cunningham Co. will obtain for its increasing necessities permanent quarters on Main Street. A contract of sale has been entered into between the Cunningham Co. and Richards Brothers, and by its terms the latter is to convey to the

former forty-one feet and a fraction at Nos. 48-50 South Main Street, and running back nearly 300 feet to Richards Street, for a price approximating \$33,000.

Scotts, Mich.—Wells N. Adams has purchased the Hardware and farm implement business of Wilson & Gilson.

Sioux City, Iowa.—Limback & Esterling will remove their implement stock from Pearl Street to the building in Douglas Street, immediately at the rear of the old First National Bank building, Fourth and Douglas Streets.

Springfield, Mass.—George E. Buck and Harvey Chapman, who for many years had been in the Hardware business under the firm name of Buck & Co., have dissolved partnership.

Springfield, Tenn.—The firm of Henry & Sprouse, Hardware and farming implements, have moved into their new house.

Toledo, Ohio.—D. W. Canfield has purchased the Starr Avenue Hardware store and is rapidly pushing his business to the front.

Business Embarrassments.

New Ulm, Texas.—Otto Kochendoerfer, Hardware and furniture, has made an assignment.

The Blount Door Check

is described in a monthly bulletin of good things
issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we de-
liberately here and now state, that the Blount Door Check is the *only*
perfect one at present correcting man's tendency to leave the door
ajar. 'Tis practically all in one piece, is simple, positive in action,
wont get out of order—in short, it is "far and away" the best door
doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the
device and bearing the name and address of the Dealer. The name of this Company does
not appear upon them.

The Yale & Towne Mfg. Company.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Akron, Ohio.—The Standard Silver Plating Co. has been incorporated by H. Schumacher, M. Schumacher, B. T. Willis, J. O. Knapp and C. A. Williams; manufacturing and dealing in Hardware and silver-plated ware. Capital stock, \$50,000.

Buffalo, N. Y.—The McLannen-French Paint Co., of the province of Ontario, Canada, has qualified under the laws of Ohio, with its principal office at Buffalo, N. Y. The capital stock is fixed at \$90,000.

Buffalo, N. Y.—The Messersmith Novelty Co.; manufacturing hose couplers and novelties. Capital, \$2000. Incorporators: W. Messersmith, J. F. Sargent, Jr., T. A. Jamison, all of Buffalo.

Calcium, Pa.—Albert Hoffman and Mayberry Keim have opened a factory near here for the manufacture of wheelbarrows.

Camden, N. J.—The Philadelphia Steel Co. has been incorporated by Edward M. Middletown, Joseph M. Rowland and Aaron T. Samson, Jr.; manufacturing iron and steel. Capital stock, \$500,000.

Charleston, W. Va.—The Westmoreland Steel Mfg. Co., of Pittsburgh, has been incorporated under the laws of West Virginia by C. S. Knight, Jr., C. S. Cook, J. D. Sutherland, W. S. Wright and H. S. Sands, for the purpose of manufacturing iron, steel, and other metals. Capital stock, \$2500, with privilege of increasing it to \$250,000.

Chicago, Ill.—The E. A. Stevens Co.; capital \$5000. Manufacture tools, instruments and machinery. Incorporators: E. A. Stevens, J. T. Cable, Frank M. Fairfield.

Chicago, Ill.—The Enos Fire Escape Co. Capital, \$2500. Manufacture fire escapes. Incorporators: Robert Miller, Donald L. Morrill, Chilton P. Wilson.

Chicago, Ill.—The Sall Mountain Asbestos Mfg. Co.; manufacturing and dealing in asbestos and fireproofing. Capital, \$10,000. Incorporators: C. E. Cook, Laura D. Benjamin, Cecil M. Clarke, all of Chicago.

Cleveland, Ohio.—The Putney Mfg Co. have located at Carrollton. The firm makes all kinds of farming implements.

Cleveland, Ohio.—The Quay-Daykin Co. has been incorporated by D. M. Quay, H. W. Daykin, S. L. Drake, R. R. Castner and M. M. Fishley; steam and water heating. Capital stock, \$25,000.

Elizabeth, N. J.—The American Swiss File & Tool Co.; principal office, No. 410 Trumbull Street; manufacture files, tools, etc. Capital, \$30,000. Incorporators: Edward P. Reichheim, Bayonne, N. J.; David Kutner, Linus Schrier, Brooklyn, N. Y.

Fulton, N. Y.—The Farmers' Hedge & Wire Fence Co.; construct hedge and wire fences. Capital, \$40,000. Incorporators: F. W. Fenner, Little Utica; J. G. Wilcox, Clifford; R. Serson, Antrim, Ont.; A. Kain, Angola, Ind.

Garwood, N. J.—The John King Metal Co.; manufacture, smelt and manipulate iron, steel, brass, etc. Capital, \$125,000. Incorporators: Walter C. Childs, William G. Woolfolk, Jr., of New York City; Thomas M. Day, Jr., Plainfield, N. J.

Grand Rapids, Mich.—The Grand Rapids Malleable Co.; manufacturing and sale of castings. Capital, \$125,000. Incorporators: T. J. O'Brien, E. Lowe, of Grand Rapids; J. P. Ray, D. M. Ray, J. P. Rice, all of Detroit.

Hartford, Conn.—Frank Grant and Benjamin S. Woodward, as principal stockholders, have filed articles of incorporation at the State Secretary's office for the establishment of a concern in this city to be known as the Woodward & Rogers Co., which will manufacture and deal in machinery, tools and specialties. The capital stock is \$30,000, divided into 300 shares.

Jersey City, N. J.—The United States Iron Co. has been incorporated by William H. Brearley, Clifford W. Perkins and Kenneth K. McLaren; manufacture steel and iron. Capital stock, \$1,000,000.

New York, N. Y.—The Avery-Marr Co.; to manufacture Hardware novelties; capital, \$5000. Directors: Thomas D. Avery, Matthew A. Marr and Z. L. Heal, New York City; J. J. Haggerty and F. E. Sweet, Brooklyn.

Passaic, N. J.—The Tornqvist Co. has been incorporated by Peter Tornqvist, Adam R. Tornqvist and Anna T. Tornqvist; deal in all kinds of work in sheet iron, tin roofing, etc. Capital stock, \$10,000.

Changes and Improvements.

Chicago, Ill.—The Chicago Pneumatic Tool Co.; capital stock increased from \$60,000 to 750,000.

Chicago, Ill.—The Buck Heating Co. has changed its name to Buchanan Heating Co., and increased its capital from \$2500 to \$20,000.

Chicago, Ill.—Valentine & Co., the New York paint, varnish and color manufacturers, are building a large three-story building in this city. The ground floor will be devoted to tanks for the storage of varnish. The other two floors will contain machinery and facilities for the grinding and packing of colors and paints.

Cleveland, Ohio.—The W. S. Tyler Wire Works Co. has changed its name to The W. S. Tyler Co. This change was made simply as a matter of convenience, there being no change whatever in the management, W. S. Tyler being president and Proctor Patterson, secretary and treasurer.

Fulton, N. Y.—The roof on Foster Bros.' new knife factory is being placed in position.

Guelph, Ont.—The Guelph Axle Works, lately owned by Alexander Smith, has changed hands. A company has been formed, with John Mitchell at its head to take over the plant and good will.

Le Roy, N. Y.—The Le Roy Plow Co., which recently purchased a tract of land

south of their present group of buildings, have commenced some extensive improvements thereon. First a two-story building, 60x100 feet, will be erected, the foundation of which is now under way. A blacksmith shop 26x40 feet is also to be built and the front part of the present main building is to be raised another story over a space of 44 feet square. The new buildings and additions will double the capacity of the present plant and furnish labor for a large number of mechanics during construction, and after the completion many shop hands will be added to the present force.

Milwaukee, Wis.—The Milwaukee Harvester Co. are to erect a new foundry, to cost \$60,000. It will be of solid brick and stone. The main building will be 100x400 feet and 45 feet high. The annex to this will be 100 feet long and 30 feet wide.

Omaha, Neb.—The Nebraska Moline Plow Co. have taken out a permit to erect a four story brick warehouse at Nos. 714 to 718 South Eighth Street, to cost \$9000.

Rome, N. Y.—The large building on St. James Street, occupied by Owens & Williams, and known as the Rome Planing mill, has been sold through Jno. S. Baker to the Pell Gear Works, the consideration being \$4500.

Shelburne Falls, Mass.—George D. Crittenden has bought the old plane manufactory at Kelloggville.

Springfield, Mass.—Pomeroy & Van Deusen find that their whip manufacturing business requires more room and have leased the space in E. A. & S. A. Allen's building occupied by the Searle Whip Co. This means that Pomeroy & Van Deusen will now occupy the entire space of this big factory building, and Mr. Van Deusen says that even this will not accommodate the business of the concern.

Woodhaven, N. Y.—The new enameling plant of the Lalance & Grosjean Mfg. Co., of this place, which extends from Atlantic Avenue on the north to University Place on the south and takes in from Clinton Place to Thrall Place in width, is completed and ready to begin operations. It is to be used exclusively for the new electric process in the manufacture of agate nickel steel ware.

Recent Embarrassments.

New York, N. Y.—Menadier Bros., brush manufacturers, No. 275 Water Street, have made an assignment to Ernest B. Wright.

Recent Fires.

Metamora, Ind.—Henry Lennard's handle factory has been burned. The loss is \$8000, with insurance of but \$1000. The origin of the fire is unknown.

Minneapolis, Minn.—C. H. Roberts, iron and wire works, damaged by fire at a loss of \$5000.

Minneapolis, Minn.—J. K. Miller & Co., tin and sheet iron works, damaged by fire.

New York, N. Y.—Selchow & Righter, No. 390 Broadway, manufacturers of toys, destroyed by fire.

CARY'S PATENT
HINGE
 AND
HASP

Designed Especially for
 Fruit Crates, Milk,
 Egg, Cracker and
 other styles of
 Boxes, requiring a
 hinged cover.

CARY MFG. CO.,
 19-21 Roosevelt St.,
 NEW YORK.

SAMPLES
 BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

**NEW ERA RADIATORS**

SQUARE STYLE.

Used on **STOVE** or **FURNACE PIPES** save the **HEAT** that usually ges up the chimney. They are simple in construction, handsome in appearance and powerful heaters. One or more of these great fuel savers should be in every house.

NOW IS THE TIME TO PUSH THEM . . . WRITE FOR PRICES.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"SHOULD MISS IT VERY MUCH."

Morley Bros., Saginaw, Mich. [*General Hardware*]: We receive HARDWARE every issue, and find it of such interest as to oblige us to look through its pages quite carefully, and note with considerable interest the items you publish. It is quite an aid to the writer in his branch of the business, and we wish to say, that we should miss your paper very much indeed, if we did not receive it.

W. L. Sandford.

ALL
THE NEWS.

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its twentieth volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

PUBLISHED BY

THE HARDWARE PUBLISHING CO.,
No. 143 Chambers Street,
NEW YORK.

PRICE \$1.00 PER YEAR FOR 24 ISSUES.

Eclipse Cleanable Refrigerator.

"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which the cold dry air is taken to the lowest point in the provision room, through a removable flue, thus creating a positive circulation.

The upward current of air through the provision chamber is so swift that moisture and odors are quickly forced to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for cleaning. Has an exceptionally large ice chamber.

Made in attractive plain and ornamental finishes, neat and attractive designs and excellent workmanship.

THE BURR PATENT STEEL.

Safety Lift Block

A Perfect Self-Locking Rope
Tackle Block.

Runs as freely as an ordinary rope tackle block.
Holds more securely than a chain block.
Locks instantly and does not cut the rope.
Allows the load to be lowered safely and slowly, the operator using only one hand.
Cannot stick nor jam when the load is to be lowered.

"I have tested the Burr Self-locking Steel Tackle Block and find it the most practical, quick and reliable Safety lift I know of."

— OVER —
200,000 of these **HEATERS**
NOW IN USE.

And nothing but words of praise
in testimony of their excellence.

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates—durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

HARDWARE

It was a happy thought of Julius C. Birge, who, when closing his address at the Convention, said that "The surest way to prevent a revulsion of good conditions is to expect it."

By their liberal distribution of handsome souvenirs at the Pittsburgh Convention, the Reading Hardware Co. brought the delegates to take a stand that was a popular move. It was a beautiful bronze ink-stand, and was greatly admired.

One of the delegates said truly that if the time should ever come when the rotund personality of that prince of good fellows, Secretary-Treasurer Fernley should cease to be in evidence, the Convention would lose its most interesting feature, and the delegates would think they were in the wrong building.

The Bridgeport Chain Co., Bridgeport, Conn., have recently issued a very attractive catalogue of their various specialties, including some entirely new and novel to this catalogue. We drop this little "tip" so that our readers may send for the same, as it will be found well worth their perusal. We reserve a more extended notice for a future issue.

To those interested in China trade it is a very gratifying fact that the annual report of the Inspector-General of Customs in China, giving the business of 1898, shows an increase of nearly 40 per cent. of imports into China from the United States. This is a specially interesting and important fact, because it is also shown in the same report that the increase in total imports is less than 5 per cent.

Mr. Albert S. Strauss, who for the past five years has been connected with the Ralph Temple Co., Chicago, has resigned his position as manager with that concern, and is desirous of getting into communication with manufacturers of Hardware specialties, with the object in view of representing them in Chicago and Western Territory.

The Louisville (Ky.) Bolt & Iron Co. has recently been incorporated in that city, with a capital stock of \$150,000. The company, which is now located at Anderson, Ind., is known there as the Anderson Bolt & Iron Co. Being worked with natural gas, the giving out of that description of fuel caused them to decide to move to Louisville and reorganize. The incorporators are L. S. Taylor, C. A. Parker, S. S. Bush, Willis P. Davis and Clarence Dallam.

George Waterman, the indefatigable representative of the Allerton-Clarke Co., and their immediate predecessors for the past six years, has amicably severed his connection with that house and joined the traveling force of Tower & Lyon, No. 95 Chambers Street, New York. He will represent their important lines of specialties, so long and favorably known to the Hardware trade, covering as his territory New York State and New England. "George" is an earnest worker, and we commend him to his new trade as being well able to look after their interests.

As an evidence how completely the products of America are reaching to every foreign clime it is stated that there will shortly be shipped from this country to India sixty-one carloads of steel, which metal it is intended shall be used

in constructing bridges. In this particular industry that of bridge-building, America may truly be said to lead the world, and in the manufacture of bridge material she is as far ahead as it is possible for a nation to get.

At a regular meeting of the governors of the Hardware Club, on November 10, the following new members were added to the roll:

W. BARTON BALDWIN,

60 Murray St., New York.

THEODORE F. MARSELES,

36 Warren St., New York.

FRANK D. TURNER,

256 Broadway, New York.

In consequence of the concentration of all the bicycle saddle companies that compose the present bicycle combination, in Elyria, Ohio, the Christy Saddle Co., which moved from Jackson, Mich., to Harvey, Ill., last Spring, will be compelled to move to Elyria as well, it being an advantage to have the industry located where plenty of labor of this kind can be obtained.

Elsewhere in our paper will be found an advertisement signed "Hardware Jobber" for a travelling salesman for Western and Northwestern Pennsylvania. A Hardware traveller possessing the proper degree of talent will find this opportunity well worth cultivating, as the house advertising is among the leading firms in the industry, and the position to be filled is a good one.

The fact that a number of skating rinks are again becoming established in different locations in the country would imply that a revival of roller skating is among the probabilities of the coming winter. This has not as yet attacked the Eastern States to such a marked degree as it has further West, but an increased inquiry for skates that are desired for this special form of sport is being noticed by the various manufacturers, who are in hopes that it will even surpass the celebrity which it enjoyed in days gone by. There have been a great many improvements made in this class of skates, so that there is every likelihood, should it again become popular, it may be continued among the sports of the winter season for an indefinite period.

Interest in Acetylene Gas is indicated most clearly by small matters which occasionally come to the surface, and in this connection we note, as worthy of notice, the regular meeting of the Chicago Architectural Club, at the Art Institute, in that city, on the evening of November 13th, at which the subject of "Acetylene Lighting" was treated at length by Mr. F. Cortez Wilson of Chicago, who addressed the Club by invitation, and presented for consideration a series of comparisons and historical facts which commanded the attention of all present. The talk was followed by a quiz and demonstration, during which an ACETOGEN was shown in operation, this being the apparatus built in Mr. Wilson's works. The element of safety appeared to be uppermost in the thought of those present, and was treated from all points of view in Mr. Wilson's paper to the apparent satisfaction of his audience.

The same evening Mr. Arthur Frantzen presented a very clear and direct paper treating of the essentials for safe electric wiring.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The large attendance at the Pittsburgh convention of the representative members of the Hardware jobbers who form our staff of correspondents, will make our number of market letters present less interest than usual, from the fact of the correspondent's absence from the field of his daily labors. But the indications throughout the country still show a strong and well-sustained demand for Hardware of every description, and in regard to current quotations, very few if any signs of weakness are manifested. The high-priced condition of the iron and steel market, on which so much of the Hardware trade is founded, would make this fact patent to every investigating mind.

Those Hardware manufacturers who have not yet made material changes in quotations that prevailed in the early part of this year, it is thought will be found in line before another year commences, with the usual advance in prices so characteristic among more active lines of goods that are of daily purchase and consumption. It is doubtful if stocks as large will be carried over to another year from any low-priced purchases. It is even now a matter of contention among a number of dealers as to how 1899 stocks should be taken and inventoried; whether actual costs should prevail in order no doubt to prevent a dividend on supposititious profits which inventorying at current costs will undoubtedly produce. It would seem as though a fair average would be found more desirable for all concerned. Especially will this be the case among the dealers who still anticipate at too early a date a slump in prices.

The tenor of the discussion given at the recent convention, when the subject was brought up as to whether present conditions were of a lasting character, showed a trend of thought that they would not be of short duration, but that while advances as radical as were made necessary during the present year need not be anticipated, there would still be found an undercurrent of stiffening tendencies that would sustain the markets, provided our export trade, which has grown so rapidly during the past year, would still maintain its supremacy, and enable large producers to market their surplus.

The trade is taking into consideration the fact that on every hand an increase of productive facilities is not only promised, but is actually in operation. So that perhaps the facilities for the manufacture of leading staples will be so largely increased by another season, and the temptation to manufacture all the goods possible, which usually follows the possession of the means,

may form a condition which at present we do not see facing us. These things, while they are only apprehended by the more conservative dealers, still have their bearings, and while every care and precaution is taken to utilize all knowledge that would affect the prompt supply of goods for the coming season, dealers are preparing early orders for such lines as have previously been left until after stock-taking before definite decision is taken in regard to quantity of stock required for the Spring season.

The condition of the trade is of such a prosperous character that in the absence of any well-defined fear regarding the future, a greater number of the jobbers will take advantage of an opportunity to order goods early, under the feeling that unless this is done, it will be a difficult matter to anticipate prompt shipments in time for the season's trade. Manufacturers will undoubtedly run their factories with greater activity, and with a stronger feeling of confidence in regard to the trend of future trade than they have had in many years before at this date.

The National Hardware Association Convention.

There never was a more important Convention of Hardware jobbers held in the United States or any other country than the one which closed its labors in Pittsburgh on the 17th inst., after devoting three days to the discussion of the many points of interest which the intelligent members of the Hardware trade have had brought before them since the Convention of 1898.

That it has been an interesting and peculiar year in the way of labors connected with the organization the address of the President and the report of the Secretary-Treasurer would make amply evident to the most casual reader of those papers. It is rare indeed that a guild of dealers associated together as these are should have found such important work facing them, arising from constantly fluctuating markets, a wide diversity in regard to costs and complicated questions having reference to terms, that have been placed before them previously in the Association's history.

That the Convention has been one of the most harmonious on record is saying but very little. The representation from the manufacturers, for whose interests as much as the jobbers this Convention was organized, was very large and practical, the manufacturers themselves being permitted to enter most of the discussions and an opportunity being afforded them to reply to all the questions raised that jeopardized in any way whatever the harmonious relations which should bind the two guilds together. This was thoroughly appreciated by the manufacturers who were present, and they so expressed themselves; and it would seem to anyone interested in the future of the Hardware business that no more favorable method could be established for the transaction of a safe, profitable and important business than upon these lines.

By a method such as this all friction is eliminated, and the two parties at interest come together with a desire to please each other, with a willingness to submit to whatever is right and proper, to make the relations harmonious and enjoyable and to render trade antagonisms impossible by the candor and frankness that such methods should positively engender. It is to be hoped that the National Hardware Association of the United States will with each annual Convention

show as great an increase in their importance as to numbers and influence as to methods, and be so thoroughly appreciated by their brother jobbers that before another year comes round very few of the jobbing houses in the country will be outside the fold, who without their own co-operation in the good work are really unlicensed beneficiaries of the action of those members of the guild who meet in annual convention with a purpose so beneficent.

A Settled Issue.

One of the subjects that has lately been agitating the Hardware trade—that of changing the terms of settlement to “net cash thirty days,” and giving no discount for prompt payments—was settled conclusively by the assembled delegates at the recent Convention in Pittsburgh.

It was very evident to the trade that the abrogation of the two per cent. cash discount for payment in ten days would reflect injuriously on all the prompt paying houses in the Association, the manufacturers confessing that there was no possible way within their reach that would prevent letting some of their customers take anywhere from one to three months' additional time, without their ability to enforce a penalty. As the Hardware jobbing trade has become virtually a cash paying aggregation of dealers, this was something impossible to stand, and the outcry against it became loud and deep. At the very earliest opportunity in the proceedings of the Convention it was grappled with successfully, and a resolution was unanimously passed by the delegates from the 178 large houses of the country; and upon an appeal being made to the manufacturers present as to their acquiescence in the purport of this resolution, but one dissenting voice was heard. The resolution is as follows:

Resolved: That it is the sense of the National Hardware Association that the discount of two per cent. for cash in ten days, formerly given by the manufacturers of steel and iron goods be not construed as bank interest, but as a premium for prompt payment and an insurance or protection of credits and further, that such or similar discount be retained where still allowed, and that we urge its restoration where it has been discontinued.

It is very patent to the jobbing trade that from time immemorial they have been compelled to carry a large portion of their customers' accounts, from the fact that the dealers who are on the other end of them are located in sections of the country where it is impossible for them to make the cash payments that would be required under the ruling originally desired by the manufacturers, and which would have to be repeated by the retailers, in order to make uniform the conditions of the trade. It has been generally known that the cash discount for prompt payment has never been considered an element of cost, being regarded as an office income, due to the ability of the house to control the necessary amount of capital and do a successful business. The concerns throughout the country having banking facilities would have no difficulty whatever in obtaining bank accommodations when it was known that it was asked for especially to enable them to secure cash discounts representing a much larger percentage of interest several times over than it would be necessary to pay the bank for such accommodation, while it is also an acknowledgment to the manufacturers, from whom they expect all the concessions possible, that each par-

ticular house able to avail itself of promptly discounting its bills is deserving of every consideration in the way of prompt shipments, bottom quotations and all possible facilities for the increase in trade which cash transactions necessarily permit.

In fact, when the veteran looks back on the early traditions of the Hardware trade it may be readily understood how this has become an established precedent, that of asking a discount for prompt cash settlements, when we remember that in the old days previous to 1860 the stock of most of the Hardware jobbing houses then in existence was largely of foreign manufacture. The foreign dealers, as is the case even at the present time, were perfectly willing to extend long terms of credit, frequently selling their best customers on six months' time, with an occasional renewal of the credit if so desired, the temptation being the extra amount of interest that then obtained in all the States. On goods sold on six months' time a cash discount of five per cent. was invariably allowed. A few articles of traffic, nails principally, were sold by the dealers net cash on delivery, as the margin of profit was extremely small.

As the product of American manufacturers became more prominent in the growing trade of the country an extensive effort was made to cut this great length of credit to four months, which was successfully accomplished in the city of New York, where at that time the leading jobbing houses were located, and was followed by the members of the same guild in other large cities. In order to placate the dealers by whom this reduction in point of time was looked upon with disfavor, the cash discount of five per cent. was still retained, making a greater bid for cash settlements than obtained before. But at the time of the war—1861 and after—greater efforts were made by American manufacturers to market their products and the large amount of money then in circulation, especially in greenback times, made cash transactions desirable and more readily accomplished. Then terms were made not to exceed sixty days, from which, for prompt payment in ten days, a cash discount of two per cent. was allowed, and this has continued until the present time, with the addition of many irregular methods, which were made possible in the relations between manufacturers and jobbers, such as “dating ahead,” “allowances for freight” and various other methods by which customers could be favored, especially if they were desirable. To arbitrarily change this condition of affairs which has existed for so many years it is very evident would work a great hardship upon the jobber, throwing upon his shoulders the burden of collection and of obtaining the facilities for keeping his own credit in the highest state of perfection. It is obvious from the action of the Convention that this will be left just as it should be, by which the cash discount is not considered a concession as offsetting bank interest, but as a premium for prompt payment, and will hereafter never be considered as an element of cost, but as a slight working percentage of profit retained by the office that will be found very advantageous in making an interesting balance sheet at the end of the business year.

The grandest of all laws is the law of progressive development. Under it in the wide sweep of things, men grow wiser as they grow older, and societies better.—*Bovee.*

National Sewing Machine Co.

Recently in our columns we have been publishing a series of articles written by experienced hands, relative to the desirability of including sewing machines among the lines handled by Hardware dealers, and to add to the very general interest now felt among the trade, we have pleasure in illustrating herewith the heads of three of the lead-

FIG. 1 - THE BELVIDERE

ing models of sewing machines manufactured by the National Sewing Machine Co., of Belvidere, Ill., whose goods for many years have been handled very extensively within the Hardware trade, and enjoy a well earned reputation for capacity, easy running, fine sewing qualities and reliability.

All machines shown are of the high arm pattern, have oscillating shuttle movement, double four motion drop

FIG. 2 - THE GRAND.

feed, large range of stitch adjustment, automatic tension release, permitting instant removal of goods from the machine, automatic take-up, which requires no adjustment for sewing the heaviest or the lightest goods with long or short stitch; bobbins of large capacity and shuttles which are strictly self-threading. Needle bars are round, with adjustable, hardened steel bearings. Needles are self

FIG. 3 - THE SEAMSTRESS

setting, and every feature is of the most modern design and construction. All bearings and wearing parts, including the needle bars, are thoroughly hardened. The machines are also fitted with an automatic bobbin winder that is positive and reliable in its action. The stands are fitted with ball-bearings, and oil cups to prevent dripping oil upon the carpet. The wood-work is the highest quality

and finish and very ornamental in design. These machines are also equipped with a complete set of attachments for doing all forms of fancy work; these attachments being made altogether of sheet steel and put together with rivets, and not of brass put together with solder, as is often the case. The "Belvidere," Fig. 1, and "Grand," Fig. 2, machines operate on the eccentric principle, and the "Seamstress," Fig. 3, by the bevel gear method. The enameling and ornamental finish throughout are of the highest quality, thoroughly in consonance with the wood-work.

Recent Trade Publications.

A. & T. McKenna, Pittsburgh, Pa. Eighty-page catalogue of saloon supplies, covering an entire line of everything in connection therewith, including Champion pressure pumps, beer faucets, liquor faucets, bungs and tubes, hand air pumps, water filters, work boards, drainer boxes, liquor coolers, etc. This is a line of goods the catalogue covering which is not usually brought before the Hardware trade, and very frequently many of the unusual styles of faucets and other similar appliances that are represented therein are called for without the dealer possessing the knowledge where they are obtainable. Included in this line are a number of desirable appliances in "all copper," such as funnels, liquor measures, extra heavy large measures, whiskey pumps, etc. Included in the contents will be found the Keystone copper polish, a variety of patent corkscrews and hot water urns of various descriptions, making the catalogue an extremely complete one for the purpose intended. From the above firm we have also received a 96-page catalogue of fine metal Display Fixtures used by Hardware dealers, dry goods dealers and other distributing houses, and includes in its assortment a large variety of special appliances by which show windows are made attractive. Ease and ability are shown in special displays of a large line of goods that require such method of exploiting, a large variety of metal stands forming the groundwork, and special stands for various goods independent in their character, including swinging brackets, double wall brackets, card holders, a lot of metal wire brackets and display hooks, and a very handy variety of attachments for display windows where the merchant takes the proper trouble to display his wares. All the goods shown in this pamphlet are well made, strong and substantial, tubing being used largely, and of such weight that it cannot possibly be mashed by set-screws, or by any ordinary usage, all of them being electro-plated and well finished, the evident intention of the manufacturers being to make the goods possess a permanency that would make them desirable fixtures.

LALANCE & GROSJEAN MFG. CO., Nos. 19-21 Cliff Street, New York. New catalogue of 378 pages, dated October, 1899, covering their complete line of planished ware, brass and copper ware, spoons, hotel ware, plain and retinned stamped ware, tinnings' trimmings, pieced tin and galvanized ware, polished and bright iron ware, japanned ware, etc. This catalogue has been entirely re-arranged so as to make it subject to one uniform discount.

HUEBEL & MANGER, No. 290 Graham Street, Brooklyn, N. Y. Four-page circular covering a variety of bath-room specialties manufactured from all brass, heavily plated, and comprising in the assortment a large variety of sponge holders, comb and brush holders, soap dishes and tooth brush holders, towel baskets and bars, one, two and three bar, match boxes and tumbler holders.

The Ames Plow Co., of Boston, are making shipments of shovels to Central American ports. The orders are received through Fox Bros. & Co., of this city.

WHY I DID NOT GO INTO BUSINESS

I had reached that stage in my business career when, a partnership being out of the question with my old firm for whom I had labored in season and out of season for nearly twenty years, having accumulated a small amount of money I felt prepared to engage in the Hardware business, provided a good chance presented itself. I had not very long to wait before a man who had carried on a nice retail business for many years, and had made a snug fortune, suddenly died. He left a son who had been brought up in the store and I supposed he would still continue in the business. I had not much faith in the young fellow's ability so I quietly made up my mind that his business career would be short, and then my chance would come and I would buy out the business when he made a failure of it.

Imagine my surprise, however, when I learned one morning that the young man had sold out to another party. Had I dreamed of his intention of selling I would have approached him on the subject. Here was a chance which might not come again, and I was caught napping. When speaking of the circumstance to a friend soon after, he informed me that perhaps the person who had bought would sell again, as my friend was informed that he had only bought it on a speculation and that he did not intend to carry on the business.

This information put a new phase on the question so I resolved to interview the man in question; as I had lost one opportunity by being too backward I thought I would make bold and see what the prospects were any way.

I called on the man in his store and told him I had been informed he wanted to sell out. Yes, he said he would sell but he was not anxious. His lease had another year to run and he proposed to close it up in that time. He knew he had a good bargain and was easy about the result; yet, if he got a good offer he would sell.

Here was the chance I had been looking for. Here was a Hardware business which had been established for over twenty years in the same store which had made a fortune for its proprietor.

The location was a good one, the rent was moderate, the store was well adapted for the business and if I could buy on advantageous terms I would be the luckiest man in town. I was shown around the store and carefully looked over the stock.

I asked my man to name his price and I would consider it. As I told him the price would be cash down, I thought to bring him to the point at once. But he refused to name a figure; he would prefer that I should make an offer. I told him I could make no offer as I could form but a vague idea of the stock by looking over it once or twice. I asked him if he could not tell me how much stock he had. No, he did not know. He had bought it without taking stock. The former owner had not taken stock since his father's death. If I wished to buy he would consider an offer *en bloc* but he would not take stock now as the Fall trade was coming on and he was not that anxious to sell to take stock now. Here was a difficulty in the way. I did not like the idea of buying a stock of Hardware by guesswork. I fancied I could give a fair estimate of the amount of stock on hand; yet when I wanted to buy I did not like the idea of being guided solely by my judgment. Then the question of dead stock was an important consideration.

The probabilities were that in view of the length of time the business had been running, and the manner it had

been conducted the past few years that there would be considerable quantities of unsalable goods. I looked over the situation and the stock many times. My man accorded me the fullest opportunity for obtaining all possible information. But he was not in a position to give much. I asked for his price book. He had none, and there never had been one used in the store. The books of the old firm had been carted away. He was unable to tell the amount of former business, or to refer to any of the old invoices. He showed me his sales book and how much business he had done during the three months he had been in possession. From these I learned the following particulars of the business. The sales for the time he had been running it were on an average of \$1500 monthly, of which two-thirds were cash. He had bought of merchandise \$2500. The present expenses would about amount to \$2200 per year.

The business seemed better than I had expected, as I supposed it had run down a good deal the past few years, and I was a little surprised at the figures shown me. This trade was obtained without pushing by the present owner, as he had not advertised, not even changing the sign, but came as a matter of course and was entirely owing to the good will of the business. With this showing I was satisfied, and knew that if I bought I could easily increase the sales very materially.

I figured that turning over the stock three and a half times a year, a gross profit of twenty per cent. on sales could easily be counted on. The sales being \$18,000, the gross profit ought to be \$3600, which, after paying expenses of \$2200, would leave \$1400 as my share for salary and interest on capital. I considered that, taking things as they appeared, that there should be about \$5000 worth of stock upon the shelves. Yet, in looking it over carefully, I was convinced that this was a high estimate. Yet, in consideration of my eagerness to secure a business of my own and knowing that the chances of working up a profitable trade were good, and the value of an old-established business, I mentally resolved I would give \$5000 for the business as it stood, the proprietor to pay all outstanding bills and collect the open accounts. I was earning a salary of \$1000 a year and wanted to do as well the first year. I had \$2500 in cash and could easily borrow the balance from a relative. If I could secure the business on these terms I would be making a good trade. I took a friend of mine, who was well acquainted with stocks, and who had been connected with Hardware for many years longer than I, to look it over. His estimate of the value was about the same as mine, so I considered I was not far astray.

I referred the subject to my employer. He was much surprised when I unfolded my scheme, would be very sorry to lose my services, yet, if the chance was a good one, he would not stand in my way.

He thought there was a good opening provided I bought the stock right. On this point he urged me to go cautiously as he said it was like buying a cat in a bag to buy a business *en bloc*, and that I might make a great mistake.

I took his advice and resolved I had made a safe estimate and again interviewed the merchant.

I urged him to name his price, but he would not. Then I asked him to name an advance on his bargain. This he would not do. At last, seeing he would do nothing, I told him I would make an offer as I meant business and I wanted the store, but as I was entirely at sea in regard to

the value of the stock I might offer too low. Well, he did not care, I might come up in my figures.

Well, I would give him \$4000 cash. A look of supreme disgust came across his face at this.

"What!" he said, "\$4000 for this business? Young man if that's all the idea you have of Hardware, it's of no use of me wasting any more time."

I then apologized if I had made a mistake but I did what I thought about right, but how much would he take?

"I will take \$6500 and not a cent less."

I told him I would consider his offer and let him know in a week. I thought perhaps I had made a mistake in my estimate of the stock and began to think it over. The store consisted of three flats and a basement with only one window for display. The main stock of Hardware was on the first floor, with heavy goods in the basement. The second and third floors contained woodenware, a few fancy goods which had been in the store for years and odds and ends of surplus stock from below.

Taking his figures the sales were far too low in proportion to stock and I could not see much profit in it. Moreover I knew that \$6500 would buy a large amount of well-assorted Hardware, and I considered the price far too high, so I told him that our negotiations would be at an end. Yet I think the man was honest and was anxious to sell at a small advance on his purchase price. But I think he had been deceived himself in buying. He had paid too much for the stock, and I felt confident that he would find quite a loss when he had wound up the business.

How he eventually made out I never learned, but the more I canvassed the question in my own mind the more I was satisfied I did right. My eagerness and enthusiasm to engage in business were so great that I was in danger of erring on the amount of stock, as my better judgment since tells me that \$4000 would be a big price and would have been too high a figure.

I did not engage in business on my own account at that time nor since; but if I were to do so I would prefer buying my own stock; and if I thought the location suitable would not hesitate to make the venture. My estimate of needed capital to make the venture successful and give a man a salary of \$1000 would be \$4000. Of this I would put \$3000 in stock and reserve \$1000 for working capital and store fixtures. I would divide the money something like this:

Heavy goods, nails, glass, paint, etc.....	\$1000
Tinware and house furnishing goods.....	500
Cutlery and plated ware	300
Shelf Hardware, carpenters' tools, etc., etc.....	1200
Total	\$3000

I would calculate to turn over this stock at least four times a year, making the sales \$12,000, which should yield a gross profit of 25 per cent. or \$3000. The expenses would be about \$1500 leaving \$1500 for proprietor, of which \$1000 would be his living expenses and leave \$500 for profit on the investment. To achieve these results a man would need to understand his business thoroughly and would need to give it close personal attention in every detail. Yet I think it could be done. I would like if some of the readers of *Hardware* who are proprietors of retail Hardware stores would let us know if turning over a stock four times during the twelve months is a possible task and if a gross profit of twenty-five per cent. on sales is a safe estimate to figure on, supposing a man proposes starting business.

LYLE MERTON.

There are 1640 co-operative societies in Great Britain, with more than 1,500,000 members, doing a business of \$325,000,000 a year.—*Exchange*.

Melbourne, now the seventh city of the British Empire, consisted at the time of Queen Victoria's accession, of 13 huts.—*Exchange*.

Women Inventors.

Rev. Ada C. Bowles gave an interesting talk lately on "Women as Inventors," the result of twelve years' research, the substance of which is printed in *The Woman's Journal*. She said that in China silk weaving was invented by the wife of the fourth emperor, for which divine honors are still paid to her. Japanese bronze work was the invention of a woman. In India the weaving of cashmere shawls was invented in the seclusion of the harem by a woman, who also gave so wise counsel to the prince, her husband, that he changed her name from Nourmahal (Light of the Harem) to Nourjehan (Light of the World), and had coins struck bearing this title. Attar of roses was invented either by the same woman or by her mother, the authorities differing on this point.

The secret of Venetian point lace which had been lost in the thirteenth century, was rediscovered in this by an Italian work woman. The beautiful gauze called "woven wind" is a woman's invention. When Harriet Hosmer took her Yankee brains to Rome, she found out the way to make marble from limestone, which the Italian government had long been seeking.

In this country woman's progress in invention has kept pace with their progress in education. Mary Kees was the first American woman to take out a patent, in 1808. It was for weaving straw with silk or thread. At this time girls received hardly any education. During the next quarter of a century only fifteen patents were taken out by women. These included a globe for teaching geography, a baby-jumper, a fountain pen, a deep-sea telescope, and the first cook stove.

By 1834 women had a few more educational privileges, but not many, and in the next twenty-five years women took out patents for thirty five inventions. By 1859 high schools were opened to women, and the war was coming. The high schools taught them to use their minds, and the war forced them out into many new avenues of work. During the quarter of a century from 1859 to 1884 the number of inventions patented by women rose to 1503. Women who took their husbands' places on the farms invented many improved agricultural implements, especially at the West; women went into the shoe shops, and at once began to take out patents on machinery; women nursed in the hospitals, and invented improved bandages, can-tees, camp beds, etc. Colleges, Sloyd, and manual training are now developing the latent inventiveness of women, and during the twelve years from 1884 to 1895, the latest date to which the Patent Office reports have been published, women have taken out 3905 patents.

Some large and important inventions are due to women.

Mrs. Harriet Strong, who began by inventing a corset, afterward moved with her husband to California, and since his death she has taken out patents for reservoirs and dams. She is now an old woman, but the other day I saw that she had just patented a device for the storage of water. Mrs. Ada Van Pelt, while her husband was postmaster at Oakland, Cal., invented a permutation lock with three thousand combinations; also a letter box for the outside of houses, that throws up a signal when there is a letter inside for the postman to collect. This is now in daily use. Satchel-bottomed paper bags were invented by a woman, who was offered \$20,000 for the patent before she left Washington. An invention which revolutionized the making of screws originated with a little girl. A woman invented the Burden process of making horse shoes, which turns out a perfect horse shoe in an incredibly short time. This invention has saved the country \$2,500,000 in fourteen years. Yet there are still many persons who believe that women cannot invent.—*Scientific American*.

The largest boot and shoe industry is in Lynn, Mass.—*Ex*.

RECENT TRADE PUBLICATIONS.

THE GENEVA TOOL CO., Geneva, Ohio., are distributing to the Hardware trade their 54th annual catalogue of hay, straw and manure forks, hoes, garden rakes, scythe snaths, etc. This is one of the most artistic catalogues typographically in connection with the extensive industry with which this company is identified that we have seen in a long time. It is printed on excellent paper, fine engraving throughout, all the titles in red, while the general text is in black; has index along the front edge of the pamphlet, so that instant reference to any part of it can be made, and in connection with all the above, it is interleaved with quadrule paper throughout, in order to put in selling prices of competing goods, and other information that the jobber is so apt to desire in compact form. They take great pride in issuing this catalogue, stating in their remarks to the trade that "from a small business with a capacity of but 500 dozen per year, we have grown until our annual output is 100,000 dozen finished goods, and are pleased to say, all things considered, we now have the finest and best equipped steel goods plant in the United States." The catalogue is very complete throughout, and covers all the various lines of hoes of every description possible, weeding hoes and rakes, turnip, onion and nursery hoes, planters' hoes of various descriptions, meadow and tobacco hoes, street and mortar hoes, as well as a large variety of ordinary hoes that make up the usual assortment of agricultural implements. In addition to this, included in its contents, are floral sets, turf edgers, sidewalk cleaners, potato hooks, manure, hop and clam hooks. Among the rakes are bow rakes, the usual steel rakes, both with straight and curved teeth, extra heavy road rakes, gravel rakes, weldless steel rakes and malleable garden rakes. The assortment of hay and manure forks is of the most extensive description, combining all the different varieties, and in connection therewith is also a large assortment of spading forks, coke and coal forks, stone forks, etc. Scythe snaths are included among the goods in the catalogue as well as handles of every description needed in this branch of the business. They also make hand and revolving hay rakes, lawn rakes, and the well-known Geneva corn hooks. Altogether it is a very useful catalogue, and one that will be welcomed by every Hardwareman who receives it.

DETROIT FENCE CO., Detroit, Mich. Pamphlet catalogue of 28 pages covering their line of specialties, which consists largely of wire fences and gates for all purposes, manufactured from the celebrated Sedgwick woven wire fencing. They have been large manufacturers of such goods for a long time, having been known for sixteen years as the Sedgwick Bros. Co. of Richmond, Ind., their entire patents, machinery, and good will being sold to the Detroit Fence Co., and continued under that name. The fencing made by this company took all the medals and diplomas at the Columbian Exposition, and has stood the test of seventeen years' service. In many instances, it is said to present as handsome an appearance as when first erected. Included in the contents of this catalogue will be found all the various styles usually made in the way of fencing, from hog fencing, Improved farm fence, Perfection garden and lawn fence, and Acme special poultry and rabbit netting. They are the manufacturers of the Sedgwick stretcher, which is claimed to be a very complete and perfect tool to stretch all sizes of wire; the Sedgwick gates for fencing purposes, fitted with an adjustable hinge that allows the gate to be

set high or low, and claimed to possess marked superiority for neatness, lightness, strength and durability. In addition to the above, the company manufacture steel wire chairs and settees, stationers' wire goods, flower-pot stands, etc.

A. I. ROOT CO., Medina, Ohio. We have received the 87th edition of their catalogue of Bee-keepers' Supplies, covering the entire line of goods connected with this extensive line of business, including hives, brood frames, honey boxes, honey and wax extractors, smokers, brushes, cases, jars, pails, tumblers, etc., together with a great variety of other appliances such as are used by up-to-date bee-keepers all over the United States. The pamphlet is filled from cover to cover with every possible form of information covering this particular industry. All the various appliances, and they are numerous, are fully illustrated in many cases, showing the application, methods of use, etc., and this is all supplemented with recipes of different descriptions and technical instruction of how to make a success of this profitable business. It would seem as though it were impossible to ask a question on Bee-keeping that could not be answered by the contents of this pamphlet, and to that extent anyone interested in the slightest degree in this line of work will find it a very interesting book.

MERCHANT & CO., Inc., Philadelphia, Pa. Twelve page booklet covering their line of tubing, including seamless copper tubes, seamless brass tubes, and their seamless drawn brass, copper, and bronze tubing. The booklet gives a statement of the analyses and tests, showing quality, tensile strength and uniformity of dimensions of the seamless brass and copper tubes sold by this well-known company. They refer to the many United States war vessels, revenue cutters and trans-Atlantic steamers on which their makes of seamless tubing have been used. Incidental reference is made to the other specialties handled by this concern in connection with their large line of special wares.

HOWARD IRON WORKS, Buffalo, N. Y. Pamphlet catalogue of 80 pages, covering their line of pulleys, hangers, shafting, grindstone frames and bolt cutters, together with their line of Vises, which they have been making for years, and with which the trade is undoubtedly familiar under the name of the Howard parallel bench vise, and the Howard swivel and coach-makers' vises, which are regarded as being popular in the trade, and meet with a largely extended sale. The catalogue is well illustrated and printed on good paper.

E. W. ANDREWS INCUBATOR CO., Elmira, N. Y. Twenty-eight page catalogue covering their line of universal hatchers and brooders. This is a special catalogue for 1899, the regular edition having been exhausted, and is designed to take the place temporarily of their previous catalogue until a new one can be prepared and distributed. It is well illustrated, with the latest improved articles in their line, printed on good paper, and full of the necessary instructions to interest a dealer in the sale of incubators.

J. MARSCHING & CO., No. 27 Park Place, New York. Eight-page booklet covering their line of gold paints, including their India, French and Globe gold paint, and their Imperial gold enamel. These are put up by them to be sold as specialties through the Hardware and housefurnishing trade for decorative purposes, and all ornamental and decorative gilding. This booklet includes the price list on the same in large or small quantities, and the line is well worthy the attention of the up-to-date dealer.

The New Corbin Door Lock.

One of the handsomest brochures connected with the exploiting of a new lock is the one recently issued in pamphlet form by P. & F. Corbin, New Britain, Conn., and which is artistically illustrated and described in the

FIG. 1.

sixteen pages which constitute this beautiful booklet. The pamphlet is printed on coated paper of excellent quality, illustrated throughout with superior half tones, carefully retouched, a few of which we will use in this notice of its contents. The cover alone would be considered a work of art, showing in embossed die work white lettering and lock design on a tinted background that gives it the most artistic finish imaginable.

The new idea in builders' Hardware thus brought to the notice of the Hardware trade is called "The Corbin," a Lock Set, on the unit plan; being a door lock constructed upon an entirely new principle, which is such a radical departure from all the ideas of lock construction formerly in use that it at once attracts the attention of mechanical and architectural experts, and creates a discussion which brings into notice the simplicity, strength and completeness which are its distinguishing characteristics. The feature designated in the description of "a lock set on the unit plan" arises from the fact that the sets are shipped assembled with knobs and escutcheons attached, just as they will appear in use—see Fig. 1; each set properly adjusted for the builder's use by expert hands; is placed in a box complete for delivery to the consumer, the fact that it can be used either on right or left hand doors adding to its unique value. No complaints need be apprehended in regard to missing parts which, under the usual methods of marketing, are frequently mislaid by some of the hands through which they pass.

The "Corbin" is placed upon the market in three sizes, adjustable to any thickness of doors. One size fitting all doors from $1\frac{3}{8}$ to 2 inches in thickness, inclusive; the other two sizes are designed for doors thinner or thicker than the above popular size. One of the novel features in which the "Corbin" is original, is the method of attaching it to the door. To put the lock on it is only necessary to saw from the stile of the door a piece 3 inches deep by $1\frac{1}{2}$

inches wide; the set, just as received from the factory is placed into the cut, the machine screw that clamps the escutcheons close against the side of the door is tightened, the four screws in each escutcheon are driven home and the lock is set. The ease with which this usually difficult feat is accomplished it is claimed increases the value of this lock for general use, from its economy of time in application, as it may be done in ten minutes. It is also claimed in this connection that under no ordinary conditions can a carpenter so attach the "Corbin" that its mechanism will bind or fail to operate.

The construction of the working parts of these locks is shown in Fig. 2, which illustrates the inner detail of the office lock, where it is exhibited with the jacket removed, looking from above. The two roll backs in the center perform a double function, operating the latch and locking the door when manipulated by the collar on the inside knob. In this illustration it will be noticed, the thumb stop is "on," dead-locking the lock. If this were "off," the latch could be operated by turning either knob. To lock the door, it is only necessary to give the collar on the inside a quarter turn, throwing the roll back nearest the outside into the slot shown, making the outer knob immovable. The latch can then still be operated by the inside knob and the other rollback, or from the outside by the key, which engages this rollback by means of the locking spindle running through the knob spindles. The front door lock has a dead bolt in addition to the latch, attached to a thumb knob, instead of the dead-locking device shown in this illustration.

Another desirable feature is made possible by the unusual thickness of the lock; as the inside face is always the same distance from the outside of the door, it permits the use of a hinged or swinging latch, a form of construction that is unequaled for easy action and anti-friction qualities; with a latch of this description the door closes easily and without the slightest friction. Its perfect action allows the use of an easy spring which requires only a minimum pressure upon the knob.

One of the novel features is the protected strike, which

FIG. 2.

answering for all thicknesses of doors is the same for all locks. As will be noticed the lip at the outer edge, see Fig. 4, is mortised into the stop and the edge of the lock frame rests against it when the door is closed, rendering it impossible to insert anything from the outside to push

back the latch; the indented portion of the strike is also protected by a brass backing, making the cut in the door frame unnoticeable and giving a finished and neat appearance not otherwise possible.

The solid cast bronze frame which holds all the other parts firmly in their proper place, is shown in Fig. 3; the parts are gauged and set so closely, that the knob spindle throughout its entire length is but the smallest fraction less in diameter than the circular hole in the frame

FIG. 3.

through which it passes; giving the entire mechanism an ease and evenness of action and a firmness and solidity to the touch, found only in the most expensive locks made for special requirements. It is an important and novel feature that the "Corbin" is of screwless construction, no screws entering into the working parts, and no screw adjustment except the adjustment for thickness, the parts being held in place by four dowels and a spring cotter.

FIG. 4.

Another advantage is that all locks are reversible and can be used upon either right hand or left hand doors.

Perhaps the most radical departure in the construction of the "Corbin" is the placing of the key work in the knob. Its advantage is the securing of additional space for the latch mechanism, giving increasing strength to the frame, with an accompanying adjustment of parts that is invariably the same for any thickness of door; it gives the keyhole a position of great prominence, which when a flat key is employed, is conceded to be a taking feature. It is claimed by the makers that the form of the "Corbin" and the strength

of the escutcheons, make the door stronger at this point than at any other, and much stronger than where the door is cut into, as in ordinary mortising without the strength imparted by the escutcheon.

Owing to the length of this review, we have not dwelt upon the pin tumbler locking mechanism of the "Corbin" in the construction of which two recent improvements are embodied; one the strictly Corbin feature of the introduction of master keyed work into the same shell with the individual key, using the same key way and doing away with two separate cylinders where the master key is used, and the other the adoption of ball bearings. Both these features are to be found in the pin tumbler cylinders of the "Corbin."

Evolution of Fishhooks.

Men have doubtless been fishers from very remote times, says L. G. Gates in *Popular Science*. Hunger would teach them to catch fish as well as to hunt mammals, but while the evidences of the latter are so abundant in the shape of stone weapons, the weapons or implements used for catching fish, being made of less durable material, have disappeared. The exceptions to this general statement are the few instances where fishhooks made entirely of stone, or of a combination of stone and wood, or bone, have been preserved with the other implements of similar material.

Fishhooks of silicious material have not been found in America, but hooks composed of flint or chalcedony and bone have been found in Greenland.

The invention of rude implements to facilitate the catching of fish would not require the exercise of any great ingenuity or mechanical skill. From watching the fish snap at or swallow objects thrown in the water the idea of tying some tempting bait on the end of a string and throwing it into the water, to be seized and swallowed by the fish, which could then be pulled out by means of the string, would be very simple, and from this to the earliest known attachment for making the capture of the fish more certain, that of attaching a sliver of wood to the end of the string or line, in such a way that any attempt at escape on the part of the fish would make its capture more certain, was very easy.

Afterward pieces of bone or wood, sharpened at each end, and sometimes grooved in the middle, to keep the string from slipping, were evolved.

Implements of this character are still used by the Eskimos for catching sea gulls and other water fowl. A cord made of braided grass, fifteen or eighteen inches long, is looped around the groove in the bone and fastened to a trawl line, kept extended by anchored buoys, the bone being baited with small fish, into which the implement is inserted lengthwise. The trawl lines are placed near the breeding places of the birds, and would be equally effective in the capture of certain kinds of fish.

As man gained experience and advanced in knowledge other forms of implements would be evolved, better suited for the purpose, but with the exception of better material being used in the manufacture, the fishhooks of the civilized nations of to-day are but little in advance of those used by savage races and prehistoric peoples.

Prehistoric fishhooks of bronze and others made from the tusks of the wild boar are found in the Swiss lakes. Another form of bronze fishhook, found in the Lake of Morat, is almost identical in form with those used to-day. Clipped flint fishhooks are found in Sweden. Among the aborigines of Wisconsin native copper was used in the manufacture of various weapons and implements, and fishhooks of beaten copper have been found in some of the mounds of that region.

There were produced in Missouri in 1898 over 816,000 pounds of corncob pipes.—*Exchange*.

NEW GOODS AND SPECIALTIES.

India Gold Paint.

J. Marsching & Co., No. 27 Park Place, New York, are distributing through the Hardware trade a wide selling specialty of theirs which is meeting with great success. 1

is marketed under the name of India Gold Paint, and is a reliable article intended to be sold at a moderate retail price, and handled by jobbers at a fair commission. Traveling salesmen have found it an easy selling specialty, as the desire for interior decoration and many other uses to which it may be applied, makes it an article of every-day distribution. To keep it prominent among the novelties for the retail salesman to remember, the manufacturers present with the first order the well modeled and artistic elephant shown in our illustration. The base of the figure is fourteen inches in length, designed in black, while the elephant is made gorgeous with a coating of solid gold to illustrate the color and durability of the gold paint. It makes an admirable show for counter display, and assists the sale. The India Gold Paint is put up in three sizes—half ounce, one and two ounce bottles—handsomely cased, and during the holiday season, especially, would make a desirable addition to a popular line of specialties.

Velox Ball-Bearing Grindstones.

The Velox Machine Works, No. 315 Dearborn Street, Chicago, Ill., are placing upon the market the Velox Ball-

FIG. 1.

Bearing Grindstone, which is claimed to be one of the greatest improvements in connection with grindstones with which the trade has been favored in many years. All the parts are manufactured from steel, and painted with a weatherproof paint. The frame is perfectly rigid and very

light in construction, so that it may be easily folded, and when placed in this condition it forms a compact bundle either for handling or for shipping; see Fig. 1. The application of ball-bearings to the running capacity of the stone,

FIG. 2.

as shown in Fig. 2, makes it possible to obtain double the amount of work with the same amount of power that would be necessary to run it without. Then the comfortable seat with which it is provided, and the easy-running qualities of the bearings take away from the labor usually associated with running a grindstone, all the discomfort, and about half the work because the easy-running qualities of the bearings make it almost a pleasure to do what has heretofore been the most tiresome of all jobs. In fact, it is claimed to run as easily as a bicycle. The stones are of special selected grit, and contain only the best cutting properties. They are very carefully mounted on the axle, Fig. 3, in a perfectly secure manner, and will not get out of true. The bearings being constructed on scientific principles are calculated to last a life time. Another ex-

FIG. 3.

tremely good feature is the fact that all parts are interchangeable. The diameter of the stone is about 22 inches, and they are placed upon the market, crated ready for shipping, at \$6 each, the whole affair weighing about 90 pounds.

The "Little Wonder" Clothes-Line Tightener.

J. S. Bolton, Moline, Ill., among the number of specialties that he is making, is introducing to the Hardware and housefurnishing trade the "Little Wonder" Clothes Line Tightener, which we illustrate herewith. This is a very desirable addition to the ordinary clothes line, as it not only makes the line as tight as the combined strands will bear the pressure, but in its use locks it so firmly that there is no yielding whatever when the clothes are put on. It dispenses entirely with all props usually considered necessary in clothes lines, and works with equal ease with both wire and rope. When it is necessary to do so, the

tightener will take up any amount of slack in the line by repeated turning of the tool, which of itself is so easy to operate that no great amount of strength is necessary, while its durability will keep it in use a very long time. It is manufactured of the best iron, and has wood handle, which is finished in blue lacquer. It has a sufficient leverage to easily work an ordinary line, showing its great strength. It may be used to tighten the line after the same has been put up, and can be left on until the clothes are entirely removed.

Bicycle Towing Cord.

The Bicycle Towing Cord Co., No. 3220 Norris Street, Philadelphia, Pa., are placing before the Hardware and bicycle sundries trade the article illustrated herewith, which is marketed under the name of the Bicycle Towing Cord. The towing cord reel is 2½ inches in diameter and ¼ of an inch thick. The length of the cord when fully unwound is about eight feet. This cord, although but 1-16 inch in diameter, is calculated to stand a strain of about one hundred pounds, and as the average force necessary to pull another bicycle with rider is only from four to six pounds, there is claimed to be a wide margin for safety.

The internal parts of the towing cord appliance are without delicate gearing or wheels of any kind, the springs in its construction acting directly on the reel, which takes up the cord, and all parts are readily gotten at by simply unscrewing the side plate. The reel is so formed that when the cord is nearly all out the springs strongly resist the unwinding, so that a sufficient tension is produced to take up the natural jerky motion of towing, and to break the force of any sudden pull. It is attached to the frame

of the bicycle by an adjustable clamp to fit different sizes of tubing, and is operated by a thumb-screw so that it can be put on or taken off instantly. When not in use as a towing cord, the string may be used as a baggage carrier, and the reel will keep the string from working loose.

Adjustable Drop Handle Saw.

George H. Bishop & Co., Cincinnati, Ohio, are offering the Hardware trade in connection with their line of improved saws the Adjustable Drop Handle Saw, as shown in the accompanying illustration. The method of construction of this handle and its application to the saw blade en-

ables it to be set in four different angles, which are shown by the dotted lines, the changes being made by simply loosening the side screw. The workman can arrange the handle in the position desired, and tighten the screw. The object intended to be accomplished is the adjustment of the saw from time to time in any position that will be the most favorable for the easy accomplishing of such work as may be in hand, it being a well-known fact that all mechanics are very critical about the proper hang of a saw. This would seem to overcome any captious criticism in

regard to the matter, and as the blade is referred to as being one of the company's best, satisfaction should in every case be the result.

Pelouze Postal Scale Specialties.

The Pelouze Scale & Mfg. Co., Chicago, Ill., are placing before the trade two useful articles for Holiday trade, in which ornamentation and utility are perfectly combined. The first is the new "Star" Postal Scale herewith illus-

FIG. 1.

trated, Fig. 1. It is designed for use on a lady's desk or the library table, for which utility it already enjoys a wide popularity, and supplies an every-day necessity. This is one of the new specialties of this company, and is designed for sale by all leading stationery and Hardware dealers. Differing from the tedious manouvering of the old style of scales, it tells at a glance the exact cost in cents of the postage required for letters, books, packages and newspapers to any point in the United States or Canada. It is

FIG. 2.

quite small, being only three inches high, artistically made, and will be found a useful ornament to any desk. The retail price of the "Star" Postal Scale is only \$1.25. The manufacturers also make similar scales of larger capacity, and issue a very attractive catalogue describing the different styles of postal scales. Another popular article manufactured by the same firm is their new Envelope Opener and Letter Balance, Fig. 2. While it is a most useful and practical envelope opener, by placing a letter to be mailed on the handle, if the letter exceeds one ounce in weight, or requires more than single postage, it will raise the

blade. It is handsomely nickel plated, and designed to retail at 30 cents. The Pelouze Scale & Mfg. Co. will forward free upon application a little booklet of useful holiday presents. They desire that our readers will ask for their new Candy, Household and Counter Scales.

Pump Leathers

H. B. Sherman Mfg. Co., Battle Creek, Mich., are placing on the market, through the Hardware trade and kindred lines, the goods shown in the accompanying illustration.

tion. They put up their pump leathers nicely packed and labelled. This is done for the convenience of the trade, and to insure dealers desiring to handle these specialties that they are getting their make. The company pack the 2-inch size of cup leathers in boxes containing four dozen; the 2½-inch, three dozen; the 2½ and 2¾-inch, two dozen, and 3 and 3¼-inch, one and a half dozen; 3½ to 4-inch, one dozen; being convenient sized packages for the trade to handle. Valve and plunger leathers are packed one dozen in a box. They state that not infrequently the trade have no doubt experienced trouble with faulty leathers that are spongy, or that have holes in the bottom not in the centre, or in some cases where they fail to be uniform in size, or where they have wrinkles in the walls of the cups. These faults they desire to have it understood have been carefully studied by them, and they claim to be manufacturing leathers of such quality and by such

processes as to entirely overcome all such objectionable features. They refer to their valve, plunger and cup leathers as being made of the best oak tanned stock, care being taken that the leather should be of even thickness and cut to the proper size. It is also remarked that these leathers, packed as illustrated, can be obtained from the leading jobbers of Well supplies, and also from the manufacturers direct, when not otherwise obtainable.

Britain holds the honor of having first formed societies for the prevention of cruelty to animals, and of having first legislated for punishment to offenders.—*Exchange*.

How to Run an Automobile.

An electric carriage can be more readily controlled than any other vehicle. The driver merely manipulates a number of levers and need take no especial precautions in starting or stopping.

In the petroleum or steam carriage the question of fuel does not disturb the *chauffeur*, for he can readily replenish his supply whenever it may be necessary. But the driver of an electric automobile is hampered by the limited capacity of his battery. When his power gives out he must seek a source of electricity and lose considerable time in recharging. For this reason he must learn how to utilize his current to the utmost profit—a matter which is simple enough, but which requires a little study. He should keep an eye on the road before him, increasing his speed on an up grade, shutting off the current on a down grade, stopping his carriage by allowing the motor to run down, and not by means of the brake, and avoiding all unnecessary, excessive discharge. By handling his current and motor thus judiciously he can add ten kilometres to the distance which his carriage can normally cover.

These rules—increasing the speed on an up-grade, shutting off the current on a down grade, and allowing the carriage to travel by its own momentum—are simple enough, and are easily learned and applied. In coming to a stop, shut off the current at the proper time, and allow the motor to run down of its own accord; use the brake only when the momentum acquired will carry the vehicle too far.—*Professor Michotte in The Automobile Magazine*.

The Way a German Tests a Sickle.

An old German called at a Hardware store to purchase a sickle for cutting grass. He was shown some of German manufacture, such as he had used when a boy in the old country. He expressed some doubts as to the genuineness of the article and proceeded to test it. He took a piece of broom straw about two inches in length, wet it with saliva, and placed it across the back of the sickle. As soon as he let go of the straw it whirled around like the needle of a compass, until it lay parallel with the blade of the sickle, whereupon he pronounced it a genuine German tool. Several persons who happened to be present were much astonished at the result of the old man's experiment, and insisted upon his repeating it, which he did several times with the same result. Then the spectators tried it, and whenever the straw was sufficiently wet, so that it did not stick, it would whirl around as surely as a needle of a compass turns to the pole. Just why the straw acts thus no one could tell, and whether it would act so on an English or an American sickle is not known. Some talked about the blade of the sickle being magnetized, but it is not known that a magnet has any attraction for a wet broom straw. Perhaps a wet straw would do the same thing on the back of a knife or any piece of iron. Anyone interested in such a thing can make the experiment.—*The Hardwareman (Eng.)*

The British army on January 1 numbered 233,560, of whom 107,000 were stationed at home, 74,500 in India, 49,000 in the colonies and 1800 in Crete. There are 18,000 cavalry. Last year the desertions in round numbers were 4000.—*Exchange*.

Though the Philippines are an agricultural country they do not produce enough food for the consumption of the inhabitants, and it is the custom to draw upon rice producing countries, such as Cochin-China.—*Exchange*.

The Prentiss Tool & Supply Co., of this city, will ship at once two engine lathes, which will be utilized in machine shops at Buenos Ayres. The order was secured through the South American Electric Co., of this city.

THE NATIONAL HARDWARE ASSOCIATION.

The fifth annual convention of the National Hardware Association of the United States was held at the Monongahela House, Pittsburgh, Pennsylvania, November 15th, 16th and 17th, 1899, and proved to be by far the most successful convention ever held by this important organization of dealers. It was attended by the greatest number

Possibly the most important action taken during its deliberations possessed a world-wide bearing upon present and future conditions of trade influence and profitable outcome. As it referred only to a detail in the construction of terms of settlement, which embraced an acknowledgment reflecting on credit conditions applying to prompt payments, it will undoubtedly be met by the manufacturers, at whom it is directed, with that spirit of intelligent fairness so conducive to the continuance of the present harmonious relations between the parties at interest.

Consequent upon the inability of President H. H. Bishop to continue in the exalted position he has so honorably and creditably filled during the year of his occupancy, it was made necessary to elect his successor. The convention recognized to the fullest extent how important had been the President's duties during the year past, undoubtedly the most exacting in the history of its usefulness as an association; the trade also attested in every possible way the acknowledgment that was due of his conscientious fulfillment of every trust reposed in him. Mr. Bishop is entitled to the proud feeling of having entered upon a year of devotion to the interests of his associated jobbers, which no one could have anticipated would have been so important; and of retiring at its close with the thanks of the entire guild crowning his labors with the insignia of successful achievement.

It was but natural that the thoroughly competent and matchless Secretary-Treasurer, T. James Fernley, should have been his own successor; few there are, even in so large a body of intelligent men, that have been so thoroughly and ably trained for such an important and responsible position. It has been held so long by its present possessor, it is doubtful if ever his congenial personality or his indefatigable vigor, confirming his incontestible fitness for so arduous a place, will ever inspire a disposition to change the present satisfactory relations governing this honorable position.

We take pleasure in spreading before our readers as much of the proceedings of the Convention as we are permitted to publish.

The following programme had been prepared in advance under Secretary Fernley's direction, showing in detail the work that

had been laid out.

THE OFFICIAL PROGRAMME.

LIST OF OFFICERS AND COMMITTEES.

President: H. H. Bishop, McIntosh-Huntington Co., Cleveland, Ohio.

First Vice-President: Col. Morris B. Belknap, W. B. Belknap & Co., Louisville, Ky.

Second Vice-President: Brace Hayden, Dunham, Cargan & Hayden Co., San Francisco, Cal.

Secretary-Treasurer: T. James Fernley, Philadelphia, Pa.

Executive Committee: John Bindley, Bindley Hardware Co., Pittsburgh, Pa.; William Chamberlain, The Emery-Waterhouse Co., Portland, Me.; Richard W. Shapleigh, A. F. Shapleigh Hardware Co., St. Louis, Mo.; Samuel A.

of delegates in the history of the association. Was welcomed in the most whole-souled and heartfelt manner by the greatest of our guild of national creators of industrial wealth, who set a pace in the fraternization of the producers and distributors without a previous parallel, and placed the Pennsylvania capstone on the arch of prosperity, which represents the apex of industrial achievement of this eventful century. A finer body of men representing a single industry never acted in a convention of such importance with a more impressive harmony of interest or with a greater willingness to concede one to the other any point of contention, backed by commercial intelligence, that would tend to disturb fraternal relations so happy and so successfully created and worthy of being perpetuated.

Bigelow, Bigelow & Dowse Co., Boston, Mass.; R. A. Kirk, Farwell, Ozmun, Kirk & Co., St. Paul, Minn.; John C. Koch, John Pritzlaff Hardware Co., Milwaukee, Wis.

Advisory Board. Composed of former Presidents: William W. Supplee, Supplee Hardware Co., Philadelphia, Pa.

Membership Committee: W. D. Supplee, Philadelphia, Pa., Chairman; T. J. Chamberlain, Detroit, Mich.; J. H. Robbins, Boston, Mass.; W. E. Newell, Atlanta, Ga.; W. S. Wright, Omaha, Neb.; T. D. Honeyman, Portland, Me.; Herman Bahlmann, Cincinnati, Ohio.

Fraternal Relations Committee: Chas. H. Turner, Albany, N. Y., Chairman; H. C. Bangs, Providence, R. I.; Hon. C. B. Lockwood, Cleveland, Ohio; J. F. Richards, Kansas City, Mo.; J. J. Mandlebaum, Little Rock, Ark.; C. C. Reynolds, Los Angeles, Cal.; J. W. Conchar, Dubuque, Iowa.

Press Committee; Col. Jas. R. Nutting, Davenport, Iowa, Chairman; George A. Braun, Toledo, Ohio; Bruce Keener, Knoxville, Tenn.; Griff Palmer, Rochester, N. Y.; T. F. Smith, Columbus, Ohio; H. C. Marshall, Duluth, Minn.; C. Van Camp, Indianapolis, Ind.

Transportation Committee; James H. Ritter, Philadelphia, Chairman; George J. Loughton, New York; Otto Witte, St. Louis, Mo.; John W. Price, Louisville, Ky.; L. Maschauer, Milwaukee, Wis.; R. K. Hireman, New Orleans, La.; George Boole, Los Angeles, Cal.

Entertainment Committee; W. C. Reitz, Pittsburgh, Pa., Chairman; R. M. Repp, Pittsburgh, Pa.; John D. Cherry, Pittsburgh, Pa.; A. J. Bihler, Pittsburgh, Pa.; Herman Lautner, Allegheny, Pa.; A. D. Clinch, New York; Hobart Weed, Buffalo, N. Y.

Grievance Committee: J. D. Moore, Birmingham, Ala., Chairman; A. W. Milligan, San Francisco, Cal.; Gaius Paddock, St. Louis, Mo.; J. W. Black, Syracuse, N. Y.; E. W. Morley, Saginaw, Mich.; George L. Irvin, Baltimore, Md.; H. L. Doten, Boston, Mass.

Metal Committee: W. T. Gummev, Philadelphia, Pa., Chairman; P. E. Strauss, Boston, Mass.; T. G. Walther, St. Paul, Minn.; J. P. Townley, Kansas City, Mo.; Clarke Merchant, Philadelphia, Pa.; G. W. Herrick, Boston, Mass.; H. H. Rudd, Cleveland, Ohio.

Advisory Metal Committee; H. W. Waite, Boston, Mass.; C. D. Clark, Peoria, Ill.; B. F. Eshelman, New Orleans, La.

ORDER OF BUSINESS.

Wednesday, November 15th, 9:45 A. M.: It is requested that the delegates assemble promptly at the hour named. At this session manufacturers and members of the press are cordially invited. Meeting called to order by the president. Chorus. Roll Call. Reading of the minutes 1898 Convention (abstract). President's annual address. Report of the secretary-treasurer. Introduction of fraternal delegate from the National Hardware Association of Great Britain. Introduction of fraternal delegate from the Canadian Wholesale Hardware Association. Introduction of the Chairman of the Pittsburgh Manufacturers' Reception Committee—Mr. H. B. Lupton.

COLLOCUTION.

Subject: "These Changed Conditions; Are they likely to be Permanent?" This feature is open to all guests, delegates and visitors. The following have consented to participate: Gen. W. H. Withington, Steel Goods Association; Julius C. Birge, St. Louis Shovel Co.; W. T. Graham, American Tin Plate Co.; John Lambert, American Steel & Wire Co.; J. A. Carter, American Bicycle Co.; Thomas K. Neidringhaus, National Enameling & Stamping Co.; Frank L. Clark, American Steel Hoop Co.; James D. Foot, Kearney & Foot Co.; George A. Baird, Republic Iron & Steel Co. Note.—Immediately after adjournment the metal jobbers are requested to meet in order to confer upon plan for their own meetings.

Wednesday, November 15th, 2:00 P. M. Address by T. H. Newman, fraternal delegate from the Canadian Wholesale Hardware Association. Report of the executive committee. Report of the membership committee. Report of the grievance committee. Report of the fraternal relations committee. Report of the transportation committee. Report of the entertainment committee. Report of the

metal committee. Report of the members of advisory board Commercial Museum. Miscellaneous business.

Wednesday, November 15, 8:30 P. M.: Smoker tendered by the Pittsburgh manufacturers at the Monongahela House.

Thursday, November 16th, 9:30 A. M.: Consideration of the committee reports. Miscellaneous business. Adjournment.

Thursday, November 16th, 2:00 P. M. Manufacturers and members of the press are invited. Collocation, subject: The cash discount—should it be abolished? If so, why? We sincerely hope that the manufacturers and invited guests will participate in this feature.

Thursday evening, November 16th; Excursion tendered to the delegates of the National Hardware Association by the Pittsburgh manufacturers to the Edgar Thomson Steel Works of the Carnegie Steel Co., Limited. Time of departure of trains will be announced later.

Friday, November 17th, 9:00 A. M.: Election of officers. Arranging seat of next convention. Miscellaneous business. Discussion: What is the best method of interesting salesmen in our work?

Friday, November 17th, 2:00 P. M.: Miscellaneous business. Discussion: What special feature of work do we desire our officers to take up during the approaching year?

Friday, November 17th, 8:00 P. M.: Banquet tendered by the Pittsburgh manufacturers at Hotel Schenley.

MEMBERS NATIONAL HARDWARE ASSOCIATION.

Alabama. Moore & Handley Hardware Co., Birmingham; May & Thomas Hardware Co., Birmingham; Barney-Cavanagh Hardware Co., Mobile; Cunningham Hardware Co., Mobile; Teague, Barnett & Co., Montgomery.

Arkansas. Fones Bros. Hardware Co., Little Rock.

California. Dunham, Carrigan & Hayden, San Francisco; Miller, Sloss & Scott, San Francisco; Baker & Hamilton, San Francisco; Holbrook, Merrill & Stetson, San Francisco; Geo. W. Gibbs Co., San Francisco; W. W. Montague & Co., San Francisco; George H. Tay Co., San Francisco; Harper & Reynolds, Los Angeles; Union Hardware & Metal Co., Los Angeles; Schaw, Ingram, Batcher & Co., Sacramento.

Colorado. The George Tritch Hardware Co., Denver.

Connecticut. C. S. Mersick & Co., New Haven.

District of Columbia. F. P. May & Co., Washington.

Florida. S. B. Hubbard Co., Jacksonville; Knight & Wall Co., Tampa.

Georgia. King Hardware Co., Atlanta; Beck & Gregg Hardware Co., Atlanta; Clarke Hardware Co., Atlanta; Charles A. Conklin Mfg. Co., Atlanta; Palmer Hardware Co., Savannah; Edward Lovell's Sons, Savannah; J. D. Weed & Co., Savannah.

Illinois. C. Sidney Shepard & Co., Chicago; Edwin Hunt's Sons, Chicago; Clark, Quinn & Morse, Peoria; Isaac Walker Hardware Co., Peoria; Tenk Hardware Co., Quincy; Morehouse & Wells Co., Decatur.

Indiana. Van Camp Hardware & Iron Co., Indianapolis; Hildebrand Hardware Co., Indianapolis; Boetticher, Kellogg & Co., Evansville.

Iowa. The Empkie-Shugart Co., Council Bluffs; Schreiber, Conchar & Westphal Co., Dubuque; A. Tredway & Sons Hardware Co., Dubuque; Knapp & Spencer Co., Sioux City; Drake Hardware Co., Burlington; Charles F. Schmidt, Burlington; Sickels, Preston & Nutting, Davenport; J. D. Seiberger, Des Moines; Patrick & Luthe Co., Des Moines; Huber & Kalbach Co., Oskaloosa; Baker Hardware Co., Sioux City.

Kansas. J. W. Crancer & Co., Leavenworth; W. A. L. Thompson Hardware Co., Topeka.

Kentucky. W. B. Belknap & Co., Louisville; Stratton & Terstegge, Louisville.

Louisiana. A. Baldwin & Co., Ltd., New Orleans; Stauffer, Eshleman & Co., New Orleans.

Maine. The Emery-Waterhouse Co., Portland; Houghton, Clark & Co., Portland; Edwards & Walker Co., Portland.

Maryland. Carlin & Fulton, Baltimore; Lyon, Conklin & Co., Baltimore; E. L. Parker & Co., Baltimore; William Fuller & Co., Baltimore; H. W. Webb & Sons, Baltimore.

Massachusetts. Bigelow & Dowse Co., Boston; Frye Phipps & Co., Boston; Baldwin, Robbins & Co., Boston; Brown & Wales, Boston; Joseph Breck & Sons, corporation, Boston; Dana Hardware Co., Boston; Chase, Parker & Co., Boston; Fitz, Dana & Co., Boston; Dodge, Haley & Co., Boston; Holder & Herrick, Boston; Butts & Ordway Co., Boston; Richards & Co., Boston; Austin & Doten, Boston; The Arthur C. Harvey Co., Boston; E. P. Sanderson Co., Boston; George F. Blake, Jr., & Co., Worcester; Charles C. Lewis Co., Springfield.

Michigan. Standart Bros., Detroit; Freeman, Delamater & Co., Detroit; Buhl Sons & Co., Detroit; Morley Bros., Saginaw; Foster, Stevens & Co., Grand Rapids; Clark-Rutka-Weaver Co., Grand Rapids.

Mississippi. Lee Richardson Co., Vicksburg.

Minnesota. Marshall-Wells Hardware Co., Duluth; C. W. Hackett Hardware Co., St. Paul; Farwell, Ozmun, Kirk & Co., St. Paul; R. D. Cone Co., Winona.

Missouri. Wyeth Hardware & Mfg Co., St. Joseph; Paddock-Hawley Iron Co., St. Louis; The A. F. Shapleigh Hardware Co., St. Louis; The Witte Hardware Co., St. Louis; Gille Hardware & Iron Co., Kansas City; Richards & Conover Hardware Co., Kansas City; Townley Metal Co., Kansas City; Rogers & Baldwin Hardware Co., Springfield; McGregor-Noe Hardware Co., Springfield.

Montana. A. M. Holter Hardware Co., Helena.

Nebraska. Rector & Wilhelmy Co., Omaha; Lee Glass-Andreesen Hardware Co., Omaha; Baum Iron Co., Omaha.

New Hampshire. John B. Varick Co., Manchester.

New York. Albany Hardware & Iron Co., Albany; Weed & Co., Buffalo; Sidney Shepard & Co., Buffalo; Barker, Rose & Clinton Co., Elmira; Irving D. Booth, Elmira; Russell & Erwin Mfg. Co., New York City; Sickels & Nutting Co., New York City; Underhill, Clinch & Co., New York City; Sargent & Co., New York City; Mathews & Boucher, Rochester; Weaver, Palmer & Richmond, Rochester; Burhans & Black Co., Syracuse; Wright, Dana & Co., Utica; Charles Millar & Sons, Utica; J. M. Warien & Co., Troy; Babcock Hardware Co., Binghamton.

North Carolina. Odell Hardware Co., Greensboro.

Ohio. The McIntosh-Huntington Co., Cleveland; The George Worthington Co., Cleveland; The Lockwood-Taylor Hardware Co., Cleveland; H. W. Leutkemeyer & Sons, Cleveland; Howell Gano & Co., Cincinnati; The Kruse & Bahlmann Hardware Co., Cincinnati; E. H. Huenefeld, Cincinnati; Bode Hardware Co., Cincinnati; The Smith Bros. Hardware Co., Columbus; Kilbourne & Jones Co., Columbus; The Stollberg & Clapp Co., Toledo; Bostwick, Braun & Co., Toledo; Canton Hardware Co., Canton.

Oregon. Corbett, Failing & Robertson, Portland; Honeyman, De Hart & Co., Portland.

Pennsylvania. Supplee Hardware Co., Philadelphia; Shields & Bro., Philadelphia; Biddle Hardware Co., Philadelphia; W. H. & G. W. Allen, Philadelphia; Newlin, Knight & Co., Philadelphia; Ritter Bros. & Co., Philadelphia; James M. Vance & Co., Philadelphia; Seltzer-Klahr Hardware Co., Philadelphia; T. Jas. Fernley, Philadelphia; Merchant & Co., Philadelphia; W. F. Potts, Sons & Co., Philadelphia; Gummey, McFarland & Co., Philadelphia; Hall & Carpenter, Philadelphia; Bindley Hardware Co., Pittsburgh; Logan-Gregg Hardware Co., Pittsburgh; James C. Lindsay Hardware Co., Pittsburgh; Wolff, Lane & Co., Pittsburgh; Lautner Hardware Co., Allegheny.

Rhode Island. Congdon & Carpenter Co., Providence.

South Carolina. Marshall, Wescoat & Co., Charleston.

Tennessee. C. M. McClung & Co., Knoxville; Woodruff Hardware Co., Knoxville; Orgill Bros. & Co., Memphis; Buford Bros., Nashville; J. H. Fall & Co., Nashville; Gray & Dudley Hardware Co., Nashville; H. G. Lipscomb & Co., Nashville; Tenison, Son & Co., Nashville; Keith, Simmons & Co., Nashville.

Texas. F. W. Heitman & Co., Houston; Eikel-Breustedt Co., Waco.

Virginia. Barker-Jennings Hardware Co., Lynchburg; Clark Hardware Co., Lynchburg; W. S. Donnan & Co., Richmond; Watkins-Cottrell Co., Richmond.

Washington. Holley, Mason, Marks & Co., Spokane; Seattle Hardware Co., Seattle; Schwabacher Hardware Co., Seattle.

West Virginia. Ott Bros. & Co., Wheeling.

Wisconsin. John Pritzlaff Hardware Co., Milwaukee; William Frankfurth Hardware Co., Milwaukee; Frederick Kroner Hardware Co., La Crosse; Gotfredson Bros. Hardware Co., Green Bay.

Key to delegates in attendance, giving the names of the jobbers and their representatives.

1. J. D. Moore; Moore & Handley Hardware Co., Birmingham.
2. C. E. Thomas; May & Thomas Hardware Co., Birmingham.
3. Barney-Cavanagh Hardware Co., Mobile.
4. Cunningham Hardware Co., Mobile.
5. G. W. Barnett; Teague, Barnett & Co., Montgomery.

Arkansas.

6. J. A. Fones; Fones Bros. Hardware Co., Little Rock.

California.

7. Brace Hayden; San Francisco.
8. W. L. Carrigan; Dunham, Carrigan & Hayden Co., San Francisco.

9. Miller Sloss & Scott, San Francisco.
10. Baker & Hamilton, San Francisco.
11. Holbrook, Merrill & Stetson, San Francisco.
12. George W. Gibbs Co., San Francisco.
13. W. W. Montague & Co., San Francisco.
14. George H. Tay Co., San Francisco.
15. Harper & Reynolds, Los Angeles.
16. Union Hardware & Metal Co., Los Angeles.
17. Shaw, Ingram, Batchler & Co., Sacramento.

Colorado.

18. The George Tritch Hardware Co., Denver.

Connecticut.

19. R. S. Woodruff; C. S. Mersick & Co., New Haven.

District of Columbia.

20. Frank P. May, F. P. May & Co., Washington.

Florida.

21. S. B. Hubbard Co., Jacksonville.

22. Knight & Wall Co., Tampa.

Georgia.

23. Geo. E. King; King Hardware Co., Atlanta.
24. W. A. Parker; Beck & Gregg Hardware Co., Atlanta.
25. Clarke Hardware Co., Atlanta.
26. A. B. Palmer; Palmer Hardware Co., Savannah.
27. Edward Lovell's Sons, Savannah.
28. W. D. Krenson; J. D. Weed & Co., Savannah.
29. Chas. A. Conklin Mfg. Co., Atlanta.

Illinois.

30. C. Sidney Shepard & Co., Chicago.
31. Edwin Hunt's Sons, Chicago.
32. Charles D. Clark.
33. F. E. Smith; Clark, Quien & Morse, Peoria.
34. James T. Neilson; Isaac Walker Hardware Co., Peoria.
35. Rudolph Tenk, Tenk Hardware Co., Quincy.
36. E. P. Bishop.
37. C. M. Hurst; Morehouse & Wells Co., Decatur.

Indiana.

38. Cortland Van Camp.
39. R. P. Van Camp.
40. Chas. W. Emery.
41. Samuel G. Van Camp; Van Camp Hardware & Iron Co., Indianapolis.
42. P. M. Hildebrand; Indianapolis Hardware Co., successors to Hildebrand Hardware Co., Indianapolis.
43. Boetticher, Kellogg & Co., Evansville.

Iowa.

44. L. C. Empkie; The Empkie-Shugart Co., Council Bluffs.
45. C. D. Scott; Schreiber, Conchar & Westphal Co., Dubuque.
46. A. W. Tredway; A. Tredway & Sons Hdw. Co., Dubuque.
47. H. L. Spencer, Sioux City.
48. C. E. Hughson; Knapp & Spencer Co., Sioux City.
49. Charles E. Otto; Drake Hardware Co., Burlington.
50. Charles F. Schmidt, Burlington.
51. James R. Nutting; Sickels, Preston & Nutting Co., Davenport.
52. J. D. Seeberger, Des Moines.
53. Patrick & Luthe Co., Des Moines.
54. W. H. Kalbach; Huber & Kalbach Co., Oskaloosa.
55. A. D. Baker; Baker Hardware Co., Sioux City.

Kansas.

56. E. W. Crancer; J. W. Crancer & Co., Leavenworth.
57. Jas. G. Bauer, W. A. L. Thompson Hardware Co., Topeka.

Kentucky.

58. W. R. Belknap.
59. William Heyburn; W. B. Belknap & Co., Louisville.
60. Stratton & Terstegge, Louisville.

Louisiana.

61. Albert Baldwin, Jr.; A. Baldwin & Co., Ltd., New Orleans.
62. B. F. Eshelman; Stauffer, Eshelman & Co., New Orleans.

Maine.

63. Wm. Chamberlain; The Emery-Waterhouse Co., Portland.
64. Houghton, Clark & Co., Portland.
65. Frederick Walker; Edwards & Walker Co., Portland.

Maryland.

66. Geo. L. Irvin; Carlin & Fulton, Baltimore.
67. Lyon, Conklin & Co., Baltimore.
68. E. L. Parker & Co., Baltimore.
69. William Fuller & Co., Baltimore.
70. D. R. Webb; H. W. Webb & Sons, Baltimore.

Massachusetts.

71. S. A. Bigelow; Bigelow & Dowse Co., Boston.
72. Albert M. Wiley; Frye, Phipps & Co., Boston.
73. J. H. Robbins, Boston.
74. A. H. Decatur; Baldwin, Robbins & Co., Boston.
75. W. Q. Wales; Brown & Wales, Boston.
76. J. F. Breck; Joseph Breck & Sons, corporation, Boston.
77. L. C. Carter; Dana Hardware Co., Boston.
78. A. J. Chase; Chase, Parker & Co., Boston.
79. P. E. Strauss; Fitz, Dana & Co., Boston.
80. C. A. Haines; Dodge, Haley & Co., Boston.
81. George W. Herrick; Holder & Herrick, Boston.
82. F. H. Butts; Butts & Ordway Co., Boston.
83. H. W. Waite; Richards & Co., Boston.
84. H. L. Doten; Austin & Doten, Boston.
85. A. C. Harvey; The Arthur C. Harvey Co., Boston.
86. E. P. Sanderson; The E. P. Sanderson Co., Boston.

WEDNESDAY MORNING SESSION.

The first session of the association was convened in the large hall of the Monongahela House on Wednesday forenoon. President Bishop in the chair. The doors were thrown wide open, extending a gracious welcome to all, manufacturers, representatives of the press and others. It was 10:30 A. M. when the president announced the Convention opened and in order for the transaction of business.

The Convention then joined in singing the National anthem. "My Country, 'Tis of Thee," led by Hobart Weed, of Buffalo.

The president stated that as the duties of the secretary are quite arduous, he would require some assistance in the form of a general secretary and a railroad secretary. So that before going ahead with the regular programme nominations would be entertained for those offices.

Mr. Chamberlain, of the executive committee, nominated to the office of general secretary J. H. Van Newkirk, of Russell & Erwin Mfg. Co., New York, which nomination was seconded, and Mr. Van Newkirk was unanimously elected to fill the position.

Mr. Bindley, of the executive committee, nominated for railroad secretary, R. M. Repp, of the Logan-Gregg Hardware Co.

The nomination was seconded, and Mr. Repp was unanimously elected to fill that position.

Roll call was next in order, and at the suggestion of the president, as the names of the houses were called, the dele-

gate from that house stood up and announced distinctly the names of those on the floor representing the house.

The next order of business was the reading of the minutes of the 1898 meeting, but on motion of Mr. Nutting the reading of the minutes were dispensed with.

The president then requested that the second vice-president, Mr. Hayden, assume the chair, when he delivered his annual address.

PRESIDENT'S ADDRESS.

Gentlemen of the National Hardware Association: In greeting you on this, the occasion of our Fifth Annual Convention, the circumstances are such that I am naturally led to take a retrospective view.

We are assembled in the city of Pittsburgh, the acknowledged center of the iron and steel industry, an industry which lies at the root of our business, and in whose prosperity or adversity we must participate. It is the city also in which we held our First Annual Convention. We are in the same hall, have the same general surroundings as then; are welcomed with even greater hospitality, and must feel that we are among friends. They welcomed us then as an infant organization, an association with good objects in view, worthy of encouragement, but with ultimate success in doubt. Those were days of trouble and

EX PRESIDENT H. H. BISHOP.

adversity, and perhaps the same doubts found a place in our own minds, although mingled with hope and resolve. Four years have elapsed, and with each succeeding one has come greater strength, greater usefulness, greater accomplishment.

We assemble to-day with larger membership, larger attendance, more enthusiastic interest than ever before. In years past, many of you have attended these meetings only after persistent urging. To-day you are here because you want to be, because you realize that benefits can and will be derived, and because you know that your convention is not merely a social gathering, of which pleasure is the main feature, but a serious assemblage of serious men for the consideration of serious problems.

I congratulate you upon the substantial progress evidenced by these facts. It is indicative of growth, of strength of purpose, and is encouraging for the work that lies before us, and to which your attention will be called through other channels than this address.

At the time of our convention held in Milwaukee a year ago, few, if any of us, anticipated the wonderful change that has come over business conditions during the present year. These changes are of such a character that we must stop and carefully consider their import, and especially what their effect is to be upon our own business affairs. All will concede that the large increase in values, which has been a strong characteristic for the past year, has had a favorable effect, especially so with those who have availed themselves of the opportunities for profit thus

afforded. But the question must have occurred to all of us, whether these conditions are to be of long or short duration. An interchange of views upon this important subject is certainly a judicious expenditure of your time on this occasion, and has been provided for in the program of proceedings. It is to be hoped that the subject may receive full attention and discussion from all standpoints, and that the conclusion reached may be so based upon logic and reason, that the final opinion of the Association may take a place in trade annals as authoritative for the whole body of merchants in our particular branch.

The year 1899 marks the commencement of an epoch in the history of the manufacturing industry of our country. It has witnessed the consolidation of large interests under one management, to an extraordinary degree, and when this has not been deemed practical, the co-operation and united action of those who were formerly competitors, but by the co-operation have become friends. All such organizations are defined in the public press and in ordinary conversation as "Trusts."

Politicians seek to make their existence and control a political issue upon which we are to take sides either for or against. To my mind, the problem is less one of politics than of business economy. It is the business world that will either foster or destroy the movement. This subject is therefore an important one for us to debate. It is well for us to consider the causes that have brought these organizations into existence, whether their existence is a blessing or a curse, whether they will be so conducted as to produce beneficent results to themselves, to their customers, and to the public at large.

From experience gained during the past year in negotiations with organizations of this character, I can assure you that the views and wishes of this Association are, and will be, respected and valued. The importance of your co-operation and assistance is not underrated, and you can—if you will—be a factor, in making them an instrument of good for all concerned, or in arresting a tendency toward evil.

I would that it were within my power to make each one of you feel the enthusiasm that I do myself, as to the power of our organization for good, not only for our own members, but for our friends, the manufacturers, and our still dearer friends, our customers. We can with proper organization, exert a strong influence towards carrying trade into its proper channels, from which during the years past, it has been frequently diverted. We can convince the manufacturer that his province is manufacturing, that ours is distributing, and that the retailers is in supplying the consumer. That each has his rights. We can formulate a code of ethics for trade customs that will be accepted as authority and will be the unwritten law to govern, not only this generation, but those which are to follow us. We can, by fostering confidence and good will among ourselves, render our business life peaceful, where it has been warlike.

To achieve this we must act as one man, must have but one opinion, and that must be the opinion of the majority. Each one must feel a willingness to yield some pet theory that is not approved by the majority, and to act on the lines that may be deemed best for all. You must have a mouth piece through whom these views and opinions are to be presented and contended for, and he must not be embarrassed by contrary views expressed in private conversation. More detailed views upon this subject will undoubtedly be conveyed to you in the report of the Executive Committee.

As indicative of the fact that our reputation as an Association is not confined to this country, it is only necessary to call your attention to the enthusiastic reception tendered our ex-president, W. W. Supplee, by the National Association of Great Britain, on the occasion of a visit to that

country during the past year. While we all recognize that the personality of the man would of necessity command respect, we cannot be blind to the fact that the ovation accorded him was largely due to his official connection with this organization. It is to be hoped that he may be prevailed upon to give us, in the course of our session, some account of his experiences, which will, without doubt, be alike pleasant and profitable to us.

While we are assembled here in greater numbers than ever before, and our ranks so far as firms or corporations remain unbroken, we must pause a moment to extend sympathy and condolence to those who have met with losses by death in their own companies. The roll for 1899 is a longer one than ever before:

B. H. Babcock, of Babcock Hardware Co., Binghamton, N. Y.

R. Francis Richards, of Richards & Co., Boston, Mass.

George Tritch, of Geo. Tritch Hardware Co., Denver, Col.

William Honeyman, of Honeyman, De Hart & Co., Portland, Ore.

James D. Maharg, of J. M. Vance & Co., Philadelphia, Pa.

Mr. Babcock will be remembered by those who attended our last Convention, and who had the privilege of meeting him. Quiet and unassuming, he was respected for his worth by his associates and all who knew him. Mr. Richards, of Boston, was the head of an old and respected firm. He was in the prime of life and had much to live for. His competitors in his own city can bear testimony to his character and to the grievous loss that they have sustained.

George Tritch was one who has long been known in the trade. A strong character and unique. In the early days of his life in Denver, it is related that in buying he never made an effort to purchase at extreme market prices, but indeed frequently paid higher rates. His reason as given to an inquisitive friend was that it was to his advantage to pay high prices, for he always added 100 per cent. in selling anyhow. Mr. Tritch was also well known for his prognostications in regard to high and low values, in which he had the utmost faith. He passed to a well-earned rest, and his name will continue to exert an influence for many years.

William Honeyman, of Portland, has never been present with us. His firm stands amongst the best on the Pacific Coast, and we can do no less than extend our sympathies to his partners who have been with us in the past.

James D. Maharg, of Philadelphia, connected with the firm of J. M. Vance & Co., was an example of the type of merchants produced by the City of Brotherly Love. Respected by his colleagues and all of his friends, he has passed to the beyond where trouble ceases.

While we have met with losses, it is after all, only what we must expect and be prepared for in the course of nature. Others must be found to take up the work they have performed, and to do it as well or better than their predecessors.

Reports of the work accomplished during the year will be presented to you by the secretary-treasurer and the various committees. Recommendations as to policies for the year to come will emanate from the Executive Committee, and I bespeak for all these documents the most careful consideration.

It has been my privilege and pleasure to address you by circular letter a number of times during the past year, principally upon the subject of concerted effort towards taking advantage of the market conditions to secure yourselves a reasonable profit, and urging upon you the maintenance of prices that may have been established by organized bodies of manufacturers. The kindly expressions of approval of these letters from many members has been exceedingly gratifying to me, and from reports heard from many sections I am satisfied that they have not been en-

tirely without result. Testimony is very general to the effect that the market has been followed more closely than in similar periods where the same conditions prevailed and if this testimony is true, it must be conceded that the existence of our organization has been a prominent factor in accomplishing this result. We should not be satisfied with what has been done in this respect. If there are sections where confidence and good will are yet but little developed, let us hope that the experience of those in more favored sections, may serve as encouragement to make further efforts. I believe that an interchange of views upon this subject would be very interesting and advantageous to all.

With the approval of the Executive Committee, I issued on September 21st, a letter to the traveling salesmen of all Hardware houses in our Association, asking for an essay on the subject: "The Difficulties of Selling Hardware with Profit, and some Practical Remedies." These circular letters were sent to the houses for distribution, and we have no means of knowing just how many actually reached the salesmen. The time for receiving contributions expired by limitation November 1st. Up to that date seventy-eight essays had been received. According to the terms of the offer, judgment was to be passed upon their merits by a committee of three, who at the time of writing this address are performing the work assigned them. It is to be hoped that they may be able to reach a conclusion in time to present to this Convention.

This is the first move that has been made toward enlisting the active support of the traveling salesman. I am convinced that he is a prominent factor in the matter of getting profit, and feel sure that the practical suggestions that we will receive through the medium of these essays will have an influence on the future work of this Association, that will be in the tangible form of adding dollars and cents to the profit column, which are now recklessly and ignorantly thrown away.

When I accepted the position of president, with which you honored me a year ago, I promised that I would discharge its duties to the best of my ability. I stand before you now to say, that I have kept that promise religiously. My only regret is that the ability at my command was so small. I cannot close this address without a few words to those who have been associated with me in the work. Your Executive Committee have been prompt and thoughtful whenever consulted, which has been with great frequency. Individual members who have been requested to serve on committees have done so cheerfully, although there have been some cases where it was only done at great personal inconvenience. I have been the recipient of much encouragement, both by letter and in personal interviews from those whose opinions and counsel I value highly, and for all the assistance and encouragement, I desire now to publicly express my thanks.

I also wish to say a word for our secretary-treasurer. I hesitate somewhat to do so from fear that my encomiums may enlarge his head to the same dimensions now to be found at his waist, but will run the risk. He has been faithful to his duty, has been instant in season and out of season, prompt to respond to every call. His service is not perfunctory nor machinelike, but intelligent. He loves the Association. He loves the work. Can I say more?

In conclusion, gentlemen, let me once more call attention to the wonderful progress we have made during the five years of our existence, and impress upon you that the next five years are ones of great possibilities for further progress, if you will avail yourselves of them. Your officers are your servants, you must instruct them as to your wishes, you must hold up their hands, you must act through them on all matters that are of general interest. Do this, and I venture the assertion that another five years will find your Association stronger, more respected, more efficient for good than it is to-day. I thank you for your attention.

On motion of Mr. Shapleigh the address of the president was received and made part of the record, by being spread in full upon the minutes.

The president, resuming the chair, called upon T. James Fernley, the secretary-treasurer of the association, for his report, and he addressed the convention as follows:

THE SECRETARY-TREASURER'S REPORT.

The closing of this, our fifth year as an organization, finds the speaker standing before you for the fifth time, a living monument of your toleration and forbearance; qualities which are very much appreciated by him and which he hopes you will continue to nurture for some time to come.

The past year has certainly been an eventful one, as you all fully realize. Conditions entirely novel have arisen

SECRETARY-TREASURER T. JAMES FERNLEY.

and have required mature thought and calm, deliberate judgment to meet them.

Our report should very closely outline our steps and missteps during the past year, but we have concluded to omit the latter and treat only of the former.

With the birth of the calendar year came into existence a large number of combinations of manufacturers, all having for their object the obtaining of a proper recompense for the labor and capital employed in their various enterprises. The combination of wealth and producing power, although enormous, did not so much appal us, but when we came into personal contact with the gigantic combination of intellect we were appalled, and yet our secretary-treasurer did his utmost to secrete his great embarrassment through coming in contact with these wonderful combinations of gray matter. We found these organizations of manufacturers, whether in the shape of amalgamated companies or pools under the control of a commissioner, ever ready to hear an official expression of your desire as voiced through your "humble servant."

Specially called meetings have been held with nearly all of the manufacturers interested, at which time, whether alone or accompanied by your president and committee

your secretary-treasurer has always been afforded every opportunity of placing before these interested gentlemen your most reasonable requests.

The largest of these organizations, and the one which can possibly be pointed to with the greatest pride is that of the American Steel & Wire Co., a concern whose output is estimated to exceed \$50,000,000 per annum. It was first thought this aggregation of capital would attempt economical means even to the extent of adopting what would have been the false economic principle of distributing their own product direct to the retailer and consumer, yet when we had our first interview with the main officers of this organization we were given to understand that they were only too glad that there was an avenue through which they could distribute their goods to the retail buyer and consumer; and, further, they expressed delight that there was an organization of these distributors which was in the position, through its officials, to convey to them a proper idea of the ways and means through which this organized force of distributors could be best utilized by their consolidation.

We congratulate the American Steel & Wire Co. on having adopted such a liberal policy, and hope that those who may control this organization in the future will pursue the same fair and liberal policy in the treatment of the jobbing trade.

THE AMERICAN TIN PLATE CO.

You will remember that at the last Convention of our Association a special committee was appointed to confer with the promoters of this company, which was then in an embryonic condition. The results of this conference paved the way for a later one between your officers and the Metal Committee of the Association, at which time suggestions as to the proper treatment of the metal dealers of the country were made and fully discussed.

We have had several conferences with the president, vice-presidents and sales agents of the American Tin Plate Co. during the past year. More courteous treatment it would not be possible to receive at the hands of the warmest of friends.

An earnest desire has been expressed to carefully conserve the interests of the distributors of tin plate. At all times we have not agreed with the full details of the policy of the American Tin Plate Co., and we have been compelled to point out to them wherein their policy did not seem to harmonize with the views of those whom we represented. We recall two instances of this character; namely, the question of the "legal conveyance of private brands to the American Tin Plate Co.," and that of the "insistence of the acceptance of wasters with all contracts."

We will be favored during the Convention with the presence of representatives of the American Tin Plate Co., and we believe that these slight differences can best be adjusted in consultation between the officers of the American Tin Plate Co. and the metal jobbers here assembled.

THE AMERICAN BICYCLE CO.

This organization has but recently been formed. We have had two extensive conferences with them. The conditions which have been prevailing, and, indeed, those which are now prevailing are of a peculiar nature, and require handling in an entirely different manner from those of ordinary lines of goods.

This organization has shown a decided inclination to confer with us, and we hope that such members of our Association as deal in bicycles will receive fair treatment at the hands of the American Bicycle Co.

THE SHOVEL ASSOCIATION.

This organization is on a different basis from the other companies alluded to, it being one of the large number of pools or combinations of manufacturers, conducted by that peerless and fearless industrial organizer—Mr. J. H. Parks, of Boston and New York.

This association of manufacturers is in the fourth year of

its existence, and while the most sanguine of its members at the time of its formation rather expected the organization would require the services of the undertaker at the end of about two years, yet we are able to say that it is in most splendid vigor, and bids fair to die of old age, rather than through assassination or suicide or paresis.

Almost the entire output of shovels in this country—approximately 400,000 dozen—is at the present time distributed by the Hardware jobbers.

At the time of the formation of the Shovel Association the conditions were different. But fifty-two per cent. of the output was distributed by the jobbing trade. These manufacturers appreciated the importance of the support of your organization. We are always invited to be present at the time of their meetings and the Classification Committee, whose duty is to classify the trade is made up of three (3) manufacturers, who sit in conjunction with this Association—your secretary-treasurer being accorded two (2) votes out of the five (5).

This committee is working in absolute harmony. In every instance we have been able to show to the manufacturers that our contentions were proper, or they have shown us that the information which we had was not complete.

The differential provided for the jobbing trade is a liberal one.

We commend the Shovel Association for its very liberal treatment of the jobbing trade.

THE STEEL GOODS ASSOCIATION.

This organization is built on the same lines as the Shovel Association. It is yet in its infancy and some of the individual members have yet to fully appreciate the real purposes and objects of our Association. They have also recognized us as part of the committee on classification, and we feel that eventually their plan will be so modified that better results for our Association and themselves will be obtained and hence we can work together in most hearty accord.

THE AMMUNITION ASSOCIATION.

We have had several interviews with the representatives of this organization, and upon one occasion during the year, a committee duly appointed, waited upon Mr. Odell, the commissioner, and Mr. Bruff, representing the Union Metallic Cartridge Co., calling their attention to what we considered the unfair treatment of the Hardware jobbing trade through the action of the Ammunition Association catering in such a pronounced manner to the wholesale grocery trade. We found that one of the leading wholesale woodenware dealers of the country had authority to appoint agents for the Ammunition Association, and that his recommendation that certain grocers be placed on the salary list, was almost equivalent to final action. It is with regret that we report that up to the present time, we have not had a satisfactory reply to our numerous requests, and we feel that the time is about ripe for our Association to take some action on this question.

There are many other organizations of similar nature with whom we have been treating during the year, but lack of time will prevent us giving you full details at this time, and further, you have had during the year, quite full explanations from our office.

We have interviewed upwards of two hundred and fifty individual manufacturers during the year, explaining to them the importance and objects of our organization, and in a large number of cases, have gone over their lists of buyers with them, and pointed out the names of those whom we considered entitled to be classed as jobbers.

CATALOGUE HOUSES AND DEPARTMENT STORES.

We have been extremely successful this year in showing to the manufacturers whom we have interviewed, the effect of their placing this class of operators in competition with the legitimate dealers, both wholesale and retail. We have had in our possession at all times the illustrated catalogues

and net prices which these parties circulate so freely, to every farmer and mechanic sending a postal card request for one.

Be it said to the credit of a number of manufacturers, that they have during the past year, taken a firm stand on this question. I have already advised you of one manufacturer who had a business with a single catalogue house running into a large amount of money, who, after a two-hour conference with the writer, displayed an order amounting to \$8000 (a very profitable line of goods) saying "It'll cost me a great deal to take this step, but I'll do it, and this will be the first order that I will decline. I am satisfied that the retail trade as well as the jobbing trade have aided in building up the reputation of my goods, and I'll not see any catalogue house assail them."

It recently came to our knowledge that certain agents of express companies throughout the country were acting as representatives of catalogue houses, having in their possession a catalogue, and soliciting orders from the consumers, farmers, mechanics and householders generally, and sending these orders to the catalogue houses, and undoubtedly being remunerated for so doing.

We have brought this matter to the attention of the leading express companies of the country and have assurances that they will instantly stop such practices upon it being brought to their notice, and if, after the agent is warned, he continues it will cause him to be discharged in every case where the agent is appointed by the express company. The general agents of the express companies explained to me that in some instances they were compelled to take the agent of the railroad company simply because the amount of the express business done at a given point did not justify them in maintaining an independent agency.

These gentlemen stated that even where this condition existed they would use their influence with the railroad company to prevent the agent of the joint companies from aiding one branch of their customers to the disadvantage of another.

If any of the members of our association know of cases where the railroad or express agents are acting for catalogue houses, they have but to put the secretary-treasurer's office in possession of the data.

CHANGE OF TERMS.

As you are all perhaps sadly aware, there has been a tendency on the part of some manufacturers to revolutionize the terms on which Hardware has for years been sold by removing the cash discount, and making the terms net cash, 30 days. Feeling that there is considerable doubt as to the ability of the jobbers of the country to make these terms with their customers, we have done our utmost to head-off this movement. Some manufacturers have already recalled their action, and have notified us to that effect, but some other prominent manufacturers still adhere to the arbitrary position which they have assumed.

This is a matter which has been scheduled on the official programme for discussion, and we await the decision of the Association as to future action.

THE SALESMAN'S DEPARTMENT.

We have noticed during the past year that the members of our Association are paying more attention than ever to the management of their sales department. This is very gratifying indeed, not only to the Association but to your secretary-treasurer, because he brought this weakness to your notice two years ago, after having visited almost every member of the Association from one end of the country to the other.

We feel that there is an immense field of usefulness open to us in connection with the sales department. During the year we have several times addressed the head of the sales department, and we feel the beneficial results.

Upon two or three occasions, we have communicated

with the traveling salesmen of the country through the head of the sales department.

THE PRIZE ESSAY FEATURE

has occupied more or less attention during the past sixty days and has been in line with our other work in this department. We have received a total of 80 essays. These were contributed by representatives of 33 houses, and we find upon tabulating the essays that these concerns who have given the best attention to their sales department have had the largest number of men interested in this essay feature.

We are all aware that the traveling salesmen of the country who represent Hardware houses are far above the average for general intelligence, and if we had not formed this estimate before, the careful reading of these essays would undoubtedly lead to this conclusion.

We have tabulated the "Difficulties of Selling Hardware at a profit" as outlined by these 80 gentlemen, and also the "Remedies" for the same, with the following results:

DIFFICULTIES:

Making reduced prices on certain goods in order to start business or make a favorable impression	25
Vindictive competition	23
Catalogue houses	22
Incompetent traveling salesmen	18
Competition of small jobbers	15
Manufacturers' competition	12
Allowing salesmen to adjust claims	10
Seeking unnatural territory	9
Taking into consideration volume of business instead of net profit	8
Making sales far in advance of the season	8
Making personal rebates	8

REMEDIES:

Send out only educated salesmen	10
Fix your own selling prices, and adhere to them	18
Have manufacturers refuse to sell all price cutters	18
Forbid salesmen to quote goods in competition with goods already sold	17
Manufacturers refrain from entering into competition with their jobbing customers	16

We hope during the ensuing year that this avenue of education will be closely followed. The ground is ripe for a rich harvest, and undoubtedly the traveling salesmen connected with the membership of our Association, whom we estimate number at least 2500 men, are willing and anxious that conditions should be improved.

At the last convention we reported 165 members. We now have a membership of 177. We have had a very large number of applications for membership, which are still under consideration. It has been the policy of the Association to admit to membership only those who would actually add strength to the organization.

HARDWARE BROKERS.

We are most happy to state that as a result of our efforts during the preceding four years, this element has almost entirely been eliminated. We know of several of these gentlemen who have retired from business, and are now in the employ of our members, or representing manufacturers direct to the jobbing trade.

CORRESPONDENCE BETWEEN MEMBERS.

We find room for improvement among members of our Association regarding an exchange of views as to selling prices. There is still some lack of confidence which must be overcome before we can reach an ideal condition. Some of our Association imagine that competitors would make improper use of such letters, but we believe that the friendly relations now existing would justify an abolition of such an idea.

However, we are still ready to act as the medium through which one house can correspond with another, but we urgently recommend direct communication.

LISTS AND DISCOUNTS.

Frequently during the year we have been consulted by manufacturers as to the most desirable method of arranging lists and discounts. We have always stated that our members preferred high lists with varied discounts.

This advice has been given only after a very free expression of your views through the secretary-treasurer's office. A very few of our members prefer other methods, but as these few give us as a reason the desire to save extra trouble in figuring, we can only say to such, that the

recompensing advantages are so numerous that they should waive this objection.

I dare not place in this report any figures, showing the number of complaints that have reached your secretary-treasurer of cut prices on the part of each other. Their number is very large, but it is a matter of great satisfaction to state that at least ninety-five per cent. of these rumors have been ascertained to be entirely groundless. In many instances, we have been informed by one house, that if their competitors have undersold manufacturers' established prices, they propose to immediately follow. We have written or wired that no action of this kind be taken until we had a chance to investigate. We have, by prompt action, proven within a few hours, that reports were untrue, and the result has been that market prices have been maintained.

We claim this feature of work is advantageous to the manufacturer because his goods are made agreeable for others to handle.

To all jobbers, because a proper profit is accorded, and to retail dealers because they are not compelled to pay more on several items in their bills, because a cut is made on one item, also because stocks in hands of retailers are not reduced in price by such cuts.

Let it be thoroughly understood by all purchasers that the ordinary expenses of conducting business can only be met by a legitimate profit on all sales, and that a house which cuts on a few leading items is sure to make up the loss by an inordinate profit on others. In other words, every article which is sold should pay a profit over expense of selling.

We were accorded a brief vacation by the Executive Committee, with the understanding that our correspondence should not get in arrears, so during the secretary-treasurer's season of rest, he dictated 616 individual letters.

During the past year, your humble servant has traveled 20,850 miles, which is about the average distance traveled in previous years.

During the five years of our encumbrance of this office we have traveled a distance equal to four times around the earth, and yet we are not tired, but quite willing to continue going over the earth in your interest, for the good of the trade in general, and the slight consideration involved.

We have labored during the year to the best of our ability, having only one subject uppermost in our mind, namely, the success and welfare of the National Hardware Association.

We have been away from our office eighty days appearing before organized manufacturers and urging the principles of our organization upon our membership.

Local and sectional associations have been met wherever possible. We have been most cordially received on these occasions, not because of our personality, but as the representative of a great commercial body.

Our office force has been busily engaged all year. To give you some conception of the amount of correspondence passing from our office to manufacturers and members, we would state that we have used 56,840 sheets of paper and 22,650 stamped envelopes.

We have addressed 112 letters to the entire membership, and 16 to the metal dealers only, and have dictated 8,850 individual letters.

During the first four years of our organized effort, the president and secretary were in very close contact with each other at all times, and having thus been in daily consultation, it was a question in the writer's mind whether it would be possible to as acceptably conduct the work of the Association separated at a distance from the president, but as a matter of fact, there has been no time during the year when we felt that the work was embarrassed by

reason of the fact that the president and secretary were residing in different cities. As a matter of course, we have had very frequent consultations, and daily interchange of communications.

Your secretary-treasurer has received most generous treatment at the hands of your president. During the year there has been absolutely no friction between us. The relations have been most cordial, and as the executive officer we have endeavored to execute the plans as directed by the administrative officer.

The policy of the Association is so clearly defined that in a large number of cases the secretary-treasurer has but to follow the precedent already established.

We stated at the beginning of our report that our missteps should not be mentioned. They have not been. We may have made many, but in this presence, we do not propose to admit it.

There is a wide field of usefulness open, and as long as it is your wish that the writer serve you, he is at your command.

The reading of the secretary-treasurer's characteristic report was followed by applause, and on motion of Mr. Belknap, it was received and placed on file.

President Bishop then said: The gentleman we had hoped, as the next feature of the programme, to have had the pleasure of introducing to you is a representative from the National Hardware Association of Great Britain. We still expect that some delegate from that association will be present, but the time of his arrival is undecided. I feel that it would be a very happy event if he could be present, as it would indicate something of the bond of union that exists between the two great English-speaking countries of the world. (Applause.)

Our Association has not been without its influence upon trade in other sections. The good that we have accomplished and the acts that we have performed have been watched by those who are interested in great questions. As a result we find that merchants in Canada, engaged in the same line of business as ourselves, have formed an organization with the same objects in view. We are very much complimented by having present with us to-day Mr. T. H. Newman, who is the president of that organization, and whom I have the pleasure of introducing to you.

T. H. Newman replied: Mr. President and Gentlemen of the National Hardware Association of the United States, I desire to thank you most cordially for the very hearty welcome you have extended to me as President of our young Association. I notice that Mr. Fernley has put me down for an address. I will not be able to make two addresses, so, with your kind permission, I will leave my few remarks for a later period in the proceedings of the Convention. I thank you very much for the cordial reception you have given me. (Applause.)

The president introduced Mr. H. B. Lupton, Chairman of Reception Committee, who addressed the Association as follows:

ADDRESS OF HENRY B. LUPTON.

Mr. President and Gentlemen of the National Hardware Association: A year ago I had the honor of making a few remarks before this Association, and referred to the marvelous growth of the export business in steel and iron products. From the estimates made by the United States Treasury Department permit me to bring the figures down to date.

In 1880 our imports of iron and steel products were about \$70,000,000. This year this will have been reduced to about \$12,000,000. Our exports in 1880 were about \$12,000,000. This year they will reach the magnificent total of between \$95,000,000 and \$100,000,000.

Such a volume of trade in export of iron and steel was not dreamed of a few years ago. How much these figures tell of American indomitable pluck and American enter-

prise! All lines of American Hardware and iron products are forging their way into the markets of the world, and the American manufacturers, fully appreciating this situation, are determined to secure and hold that trade at all hazards, and have placed their able and bright men in charge of the export departments. This is, of course, matter of congratulation to all true Americans, but, gentlemen, let us not forget that 85 per cent. of this tremendous tonnage is carried to its destination in foreign bottoms and under foreign flags.

Before feeling that this trade is forever secured, we must have an American merchant marine, the Nicaragua Canal, a Pacific cable and an international banking system.

This last year of the century marks a great epoch in our political and commercial history. Never before were our people so united and prosperous; no longer are sectional lines drawn, except to show the geographical divisions; no longer do we hear of the East as against the West, nor the North as against the South, but of one united people, true and loyal to that flag, and ready to fly to its defense whenever it is unfurled for the protection of our national honor, or in the cause of righteous humanity.

The granaries of the West are bursting forth with the plenitude of harvest. Two thousand million bushels of corn, six hundred million bushels of wheat, and the New South with its now diversified products comes forward with its ten million or more bales of cotton, and that cotton worth \$8 per bale more than last year. All these added in 1889 to our country's wealth.

It is estimated that the world's production of iron will this year exceed thirty five million tons. Of that tonnage nearly 40 per cent., or about fourteen million tons, will be produced in the United States.

Within a radius of sixty miles from where you now sit are assembled the ore and manganese, the coal, coke and lime stone that produce 40 per cent. of this country's tonnage. In this Pittsburgh district, the greatest manufacturing centre in the world, every furnace, every mill and every factory is running to its utmost capacity. Labor is paid at largely increased wages, and I believe the financial returns are satisfactory to those concerned.

Fully recognizing the magnificent manufacturing centres, East, West and South, Pittsburgh sits securely entrenched in her position, and to-day makes the market prices for the world.

It is eminently fitting that this Association should hold its last meeting of the century in this city, and help to celebrate the greatest year of Pittsburgh's progress and of Pittsburgh's prosperity.

As chairman of the Reception Committee permit me to tender to you, in behalf of your brother Hardware jobbers of this city and in behalf of Pittsburgh's manufacturing interests, a most cordial and hospitable welcome. Everything that is in our power will be done to make your visit both pleasant and profitable; and, as you turn your face homeward on next Saturday, and as we "speed the parting guest," may you carry with you lasting and delightful recollections of your Fifth Annual Convention.

THE COLLOCUTION.

The President then said: The next in order on the programme is our Collocution.

Subject: "The Changed Conditions; Are They Likely to be Permanent?"

W. T. Graham, of the American Tin Plate Co., being called upon, responded as follows:

ADDRESS OF W. T. GRAHAM.

Mr. President and Gentlemen: I have not had any previous experience in anything of this kind, and I may be somewhat embarrassed in attempting to talk to so large a body of prominent business men as assembled here. I can not expect to say anything new, and if I am able to influence in the slightest degree the opinion of any gentlemen

present it would be by a very plain presentation of the way or the manner in which this matter presents itself to one who has had considerable experience in manufacturing and distributing goods, and who fully appreciates that any business policy to be successful and lasting must accede to the reasonable demands of the people we serve. Therefore, if any new condition is to be permanent, it seems to me it should be reasonably satisfactory to the customers of the concern that adopts them—that it should be on the whole beneficial to the trade in which it exists.

I do not believe that any policy, or anything that is generally objectionable to those most interested, in this country at least, can endure.

Now, I shall assume that the changed conditions referred to are those brought about by the larger industrial organizations, and I conclude that their policy and their methods must be reasonably satisfactory to the gentlemen of the National Hardware Association.

I do not mean by that that any single gentleman may not have some objection to some one detail of the policy of the company, or that the policy of the company may be perfectly agreeable to all you gentlemen. I imagine the object is the greatest good to the greatest number, and that if the policy of these companies is such as will better serve that end than it was served under the old order of things, that these companies have some promise of permanency as a result of that approval upon your part. Human ingenuity could hardly devise any plan or plans of selling or distributing goods that would justify you in departing from what I presume is one of the purposes of your organization—that is, to bring about an amicable understanding with manufacturers from whom you buy, and in that way help yourselves, while indirectly you help them.

In what I may say later I want it understood that I had in mind a policy of my own, and if it does not accord altogether with other companies who are represented here, it will be understood that I have in mind our policy.

As one of the new conditions that have been brought about by the consolidated companies, and which aid in answering the inquiry of the subject, I submit: Closer relations of manufacturers with representative associations or their customers. I believe you will recognize the futility of effects in the past on the part of an association like this to secure redress of grievances by appealing to almost numberless companies.

How is it now? Your officers and committees are welcomed by these larger companies, and though you may not be able to procure their acquiescence in all your requests, every consideration is given to them, and the promises that are made are conscientiously performed.

Another new condition is uniformity in price and terms. Now, I know how hard it is for the buyer to buy, from many hard years experience in the art of gaining concessions. I have enjoyed the fancy that one feels when he has outdone his competitor in the purchase of goods; but I have had the mortification of discovering at some later date that I was not the favored one that I thought.

There is still another new condition that I think is promised, if not attained, by these larger companies, and that is the uniformity of profits on goods. I think that when a man is selling goods at a cut price he robs himself, if the price ordinarily obtained for the goods is a reasonable one; but when he undertakes to gain a business by cutting the quality of the product he robs his customer, and the demoralizing results from anything of that kind are much more lasting and dangerous than that of simply cutting a price, which is a matter for every man to decide for himself; but I think when he goes to cutting the quality of his goods that he is robbing his customers, and taking something from him for which he is paid. Now I believe that these larger companies will create standards of quality that can be depended upon more than they could have

been depended upon under the old regime, when every compact had its own standard.

There are many other ways in which new conditions have been brought about by these consolidations. It is not necessary for me to refer to them. I think they will suggest themselves to you. I believe that you will appreciate that in a great many respects the new or these strange conditions that have been brought about by the consolidation of independent companies, or by the organization of a large industry, are beneficial.

Now, all this may have seemed somewhat foreign to the subject to you. I think it is not. I have not any answer to make as to the permanency of the changed conditions. I only wish to suggest to you one line of reasoning which might help you to make up your mind as to the permanency of these new conditions. I wish it would be the general sentiment of the National Hardware Association that these conditions have improved many unbusinesslike methods that ruled in the past; that there is a probability of permanency in the new ones.

The President: Gentlemen, the remarks of Mr. Graham may have raised some questions in your mind that you would like to ventilate upon this occasion. I hope that nobody who has thoughts of that kind will fail to rise to his feet and express his views.

We have with us Gen. W. H. Withington, who will address us. I have the pleasure of introducing Gen. W. H. Withington, of the Steel Goods Association.

Mr. Withington addressed the Association as follows:

ADDRESS OF GENERAL W. H. WITHINGTON.

Mr. President and Gentlemen of the National Hardware Association: Next to the curiosity about what a "Collocation" might be, I presume there may have been some curiosity as to what kind of a looking fellow "Collocutor" might be. I hardly recognize myself in this capacity, and I don't know whether I shall be able to "Collocute" according to the picture which your humble and conscientious secretary drew in his own imagination when he dug that word out of the dictionary; but I will address myself to the task as best I may.

First, Mr. President, let me say—I think I ought to say or some of us ought to say—that I desire to express the appreciation of the Manufacturers' Association to which I belong, and possibly of others, of the courtesy of your great Association in giving us a voice in these discussions, and welcoming us to your meetings.

Now, Mr. President, I recognize very well that the time is limited; that you have been sitting here for some time, and that some members are getting impatient, and I shall endeavor not to amplify but to condense what I may have to say upon the subject that is now before us: "These changed conditions—are they likely to be permanent?"

Now, in considering this, it comes naturally to my mind to perhaps make a statement of what the new conditions are as they appear to me. I should name first, A Settled Standard of Money Value. (Applause.)

Second, enormous excess of exports over imports.

Third, abundance of money.

Fourth, great industrial activity and enormous production, and still more enormous consumption; demand in excess of supply.

Fifth, naturally comes higher and higher prices. There also naturally follows and has followed shorter terms of credit and stricter conditions imposed in all contracts; and

Sixth, a condition that is somewhat rare and entirely delightful to us manufacturers—a change in the position of the seller and the buyer—the seller on top (laughter and applause), and the buyer the under dog, and I must say that he submits to his new condition with the most remarkable complacency.

Now, if this is a fair statement of the new conditions, or

some of them, are they likely to be permanent? Well, I take it, Mr. President, that that term is used relatively, and not in its strict sense; that none of us would expect, or would undertake, to predict an absolute or a continuous permanency, but we are all of us interested, deeply interested, in the degree of permanency with which these conditions may last or extend. Now it seems to me, Mr. President, in considering this question, I naturally turn to inquire what has brought about these new conditions; and if we can settle to some degree in our minds that question, we may be able to form a little more definite opinion as to their permanency and of the conditions which have brought them about. To my mind, there stands first and fundamentally the settlement of the money question; the relief of this country from the menace of free coinage, and all the chaos and revolution, financially, which most of us believe would be involved in the success of that scheme. (Applause.)

Now, I trust it is not verging upon politics to say that in my opinion, and I believe in the opinion of most of these gentlemen here present, that that question which had hung over us so long as a pall, as an incubus, as a check upon business enterprise and ventures, that that question was practically settled by the election of 1896. (Applause.) There is much legislation which needs to follow in order to put our currency and the money of this country on a recognized and legal basis, as well as a practical and commercial one, but I have faith to believe that that will follow.

Now, next were the favorable crops in this country, beginning in 1897—large crops, and fortuitously with it, almost at the same time, short crops abroad, resulting in an enormous demand for the cereals of this country and great exportation and large prices. Now, Mr. President, to these two things and the determination of the money question, restoring confidence, released for circulation a large amount of gold. We begin to see it in the circulating medium of the country. Up to that time it had been a curiosity to a large degree. It released a large amount of gold. The increase of exports over imports brought in a large influx of gold to add to the amount which was released and put into circulation in this country. Then in conjunction with that and closely following it was the increase in the production of gold through mining throughout the world. It was officially stated that the gold in this country on hand on the first of November was one billion fourteen million and some odd thousands of dollars—the first time in the history of the country that it had ever passed the billion mark in its quantity of gold. Most of you are familiar with the fact that the increase of the world's stock of gold has gone on with remarkable rapidity and to an enormous extent. The money feature, I think, cuts perhaps more of a figure than we have been inclined to think of late; and if you will recall the past you will remember that one of the great drawbacks—that seemed to hinder the development of business and the exercise of business, was the shortage of money; not altogether an actual shortage, but largely a shortage for want of confidence upon those who held it to put it out. Now, the country itself was in a position to rapidly respond to these new conditions. There was a condition, if you will recall it for a moment, a long series of years of depression and repression, curtailment of expenses, farmers poor, everybody keeping close down in their expenditures, and nobody embarking in new enterprises. So that when these new conditions came, of which I have spoken, the settlement of the money question and the large increase of exports and increase of money we were in a condition for a rapid, strong and vigorous rebound from the long years of scrimping and careful buying.

Now, these may be considered as natural causes. There were some others, and among these others I should place the organizations—I don't now speak of combinations

and consolidations but of the organizations like your own association and like the manufacturers associations; and what have these accomplished? To my mind they have brought about an education in business method. They have brought out the best knowledge and the best practice of the best men in these organizations, to those who had given perhaps the question less thought and study and had had less experience in the handling of their business. It seems to me that has been one of the greatest causes of these better conditions—the education in better business method, such as your association and many of the manufacturers associations have brought about. Now, then, we may call these in the main, as most of them are, natural causes. Then there has come into existence an artificial cause, if I may so term it—the creation, wonderfully rapid creation of consolidations and combines, such as my friend who has preceded me represented, and upon which he dwelt considerably in his remarks. The year 1898 saw the organization of corporations, or combinations of this class, representing nine hundred millions of dollars. In the first half of 1899 there were organized corporations of this class capitalized at three billions of dollars. Why, it is almost past comprehension, it has come upon us so suddenly. Nor would I undertake to predict what the consequences might be of these organizations. I leave that for the discussion of those perhaps who are more directly concerned than I have been.

Now, if I have at all fairly stated the conditions and the causes which have led up to them, we are brought to the consideration of the question of their permanency, and I approach that with a good deal of modesty. I have undertaken sometimes in the past years to make predictions, and thought I was showing a great deal of wisdom when I stated, as I had several times to those associated with me in business, that we had reached a period of permanent lower prices and closer margins, and should never expect to see again—those of us who passed through the periods of war and through times of disorder—should never expect to see again a period of excessive profits, and I don't know but that some of you must have realized that I was a false prophet upon that.

Now, Mr. President, I shall not undertake to tell these gentlemen—I presume they would pay me quite a large sum of money if I would tell them—just how permanent these conditions would be. I don't propose to go into that very thoroughly. I only express my opinion that they will remain for some length of time. That is about as far as I will undertake to go. I think they will remain during the next year and possibly longer; and in forming that opinion in my mind I recur to the conditions which somewhat resemble the boom of 1879 and 1880. You will recall—the older members—the fact that the time for the resumption of specie payments was fixed by law as the year 1879. Everybody feared what might come from the undertaking to resume specie payments. They dreaded it as some unknown quantity. It had a depressing influence upon the previous years—to 1879 and 1880. In recurring to some facts and figures in my business, I find that the price of steel—the kind of steel which is used in our business—dropped for several years preceding 1880. I am not going into figures very much; but I notice that which had been selling at six cents dropped to four and three-eighths in 1879; it recovered in 1880 to six and a quarter and six and a half. It held those prices during 1881 and 1882, but again dropped in 1883. I note that our goods—the goods which I manufacture: steel goods, forks, hoes, etc.—that the prices advanced in 1880, and that they were held for two years following that, and the drop that came after that was a monetary condition which we are not likely to experience again. If I had time I should be glad to discuss somewhat the bearing which I think this has. I don't feel that I could do it justice in the time.

Mr. Withington then made some comparisons, showing that prices in 1880 were 20 per cent. higher than the advanced prices of to-day.

Mr. Withington's address was followed by applause.

On motion of Mr. Marshall the Collocation was made the order of business at four o'clock in the afternoon, after the close of the Executive Session.

On motion the Convention then took a recess until 2 P. M.

WEDNESDAY AFTERNOON.

At 2 P. M. the Association went into Executive Session.

This was devoted to a great extent to the hearing of reports of the standing committees, and to other miscellaneous business, having reference more especially to the general business of the Association. During above session Mr. T. H. Newman, of Canada, made the following remarks.

ADDRESS OF T. H. NEWMAN DURING EXECUTIVE SESSION.

Mr. Chairman and Gentlemen: I have to tender my sincere thanks for the very cordial reception you have given me as president of the Canadian Wholesale Hardware Association.

Our Association was formed on the 10th of January of this year. For some time past it was felt by the leading houses of Canada that some decisive steps should be taken to bring the jobbers together, for two purposes. First, to promote good will towards each other, and to draw closer the jobber and the manufacturer.

A great many of the manufacturers of Canada were selling direct to the retail trade, at the same time selling the jobber, the margin of profit to the latter being altogether too small.

Our constitution and by-laws are substantially the same as yours, in fact I can safely assert that we could not in any way improve your by-laws although we wrestled with the subject for one whole day.

I take this opportunity of tendering my sincere thanks to Mr. Fernley, your estimable secretary, for the assistance he gave us. We have now been in existence for some ten months, and have already, in that short space of time, accomplished much. We have secured better margins in many lines of goods, which previously were almost invariably handled without any profit. We have still much to accomplish, and we look forward with great confidence to the future, as far as the Hardware trade is concerned.

We have not so much endeavored to govern our own selling prices, but to clearly and definitely present our position to the leading manufacturers, and almost without exception have been met in a fair and equitable manner.

I know that it is often a common and frequent assertion that the jobbers' day is over, but I do not for a moment believe the statement. The jobber is necessary to the manufacturer. Especially is this the case in a young country like the Dominion of Canada, where we spread over such a vast territory, stretching from the Atlantic in the East to the Pacific on the West, and where the cost of distributing goods is so expensive. Our entire population is about five and a half millions—smaller than the population of the State of New York.

One object that we have kept before us during the year, is the absolute necessity of securing and maintaining a margin of profit for the jobber. This, I think we are beginning to understand and receiving the hearty co-operation of the members of our Association.

But I must not prolong my remarks. I came here by invitation and intend to listen and gain what I am sure will prove valuable information to our Association.

I again thank you for your kind invitation, and trust your deliberations will result in much good.

At 4 P. M. the Association, upon convening, continued the Collocation on the subject: "These Changed Conditions: Are They Likely to be Permanent?"

The President said: Gentlemen, We are ready to consider further the subject we had under discussion this morning. We have already heard two speakers, representing different lines of manufactures. I now take pleasure in introducing to you a gentleman from still another line, kindred, of course, to one of those whose representative has already addressed you; a gentleman who will speak to you now, whom we recognize from contact with him as a thoughtful man, a man who appreciates the needs, not only of manufacturers, but I think I may safely say is sufficiently broad-minded to appreciate the needs of jobbers also. I take pleasure in introducing to you, gentlemen, Mr. Julius C. Birge, of the St. Louis Shovel Co.

Mr. Birge addressed the Association as follows:

ADDRESS OF JULIUS C. BIRGE.

Mr. President and Gentlemen: My first impulse before getting on the platform is to express my hearty appreciation of the cordial welcome which your Association has accorded to the manufacturers here to-day, and which I am sure deserves at their hands a full response for any fair request which your Association may make of the manufacturers. The gentlemen who have preceded me have covered certain grounds of this question, which is perhaps neither ambiguous—if not ambiguous it is broad; but I am limited—the few words which I may speak—to that phase of the question which pertains to the general commercial conditions of the country, and to the present crisis. I will promise to be brief. The gentleman who preceded me in speaking upon this question referred very appropriately, I think, to the difficulty in answering this question. It is exceedingly broad and far-reaching. If it be true that the hand which points to the road to wealth brings friends when it beckons, he among you who can answer the questions which are before you will quickly find a host of friends at his side; and I think you place us who speak upon this question in a position very similar to that in which Shakespeare's Touchstone was placed by Rosalind when she said to him: "Now, Touchstone, unmuzzle your wisdom."

With reference to permanency of conditions and of prices we cannot judge the future from the past with absolute certainty, but it seems to me that the light of past observation ought to be of very great value in forecasting the future; and this light leads to the inevitable conclusion that there is nothing permanent this side the river, and by the river I don't mean the Ohio, either. (Laughter.) If this be correct, it would seem to be that the greatest profit in this discussion arises from determining what will be the first change in conditions, admitting that there must be, in the near future, some change in present conditions. I believe that it is pretty generally recognized that the key to the Hardware situation is steel. While other articles are factors, yet this great commodity seems to have been recognized for many years as an index to trade conditions, and that high prices of steel have almost universally distinguished or been a feature in times of commercial prosperity; and the reverse is also true. Other metals, from past observation, have not been as distinguishing as steel with reference to general trade conditions.

To arrive at any conclusion with reference to the effect of steel on the present conditions, it would be of very great interest to know what has caused the present advance, and where the present enormous output has gone, and it would require a great deal of time to do this, and I don't believe that I could do it if I should undertake to, and I would be placed perhaps in a position similar to that in which another searcher after truth was placed, a man up in New England. A tanner appears to have desired to secure a sign which should in some way be fitting to his establishment, and he conceived the idea of taking the tail of a calf from a calfskin and inserting the butt-end of that tail through a knot-hole beside his office door. Very soon a stranger—a venerable gentleman—passed that way,

and observed that tail floating in the wind, and he watched it for a long time until the tanner approached, and, addressing the gentleman, the tanner asked him, "Do you want to sell hides?" "No." "Do you want to buy leather?" "No." "Are you a merchant?" "No." "No," he said, "I have been watching here for nearly an hour, endeavoring to ascertain how that calf got through that knot-hole." I have been watching very carefully, endeavoring to determine where this enormous product of steel had gone.

The first index, or the first indication, of an approaching change in conditions will be overproduction and overbuying. I would like to leave that perhaps for a moment, understanding that coupled with it is the proposition of cutting prices, which is a natural sequence to overbuying, but there is one other factor which it seems to me would surely produce a revulsion in present conditions, presuming, of course, that the present conditions are prosperous, and that condition would be a change in our existing monetary system, so far as concerns the basis of our money values. Now, if our conditions are healthy, and I believe it is recognized that they are, the question arises, will doctoring do them any good? A man in physical health would be regarded as unwise if he accepted from a quack some nostrum simply for the purpose of adding to the market of that particular remedy.

A little more than three years ago thoughtful men looked out upon the depressed condition of our country as it then existed, and were very solicitous for the future. They looked at our abandoned factories in which no wheels were turning; they saw the thousands of cars lying on their sidings unused; they saw steamers lying at their wharves with no fires under their furnaces and no freight to carry. They saw mercantile houses with shutters at their windows, and they recognized that the circulating wealth of the country was in hiding in the safe deposit vaults, and they stood very much as the prophet Ezekiel stood when he looked out upon the Valley of Bones and exclaimed, "Can these dry bones live?" But when in that day, in November, of three years ago, the threat of financial tinkering was removed, it seemed as if the silent embodiment of power were imbued with new life. Workmen thronged the factories, the money came out from its hiding-places, and business took on a revival and an impulse which, as has been stated this morning, has continued to increase to the present time, until your journals tell you that for the month just closed the commercial and financial transactions of the United States were greater than have ever been known in the history of this country.

To me this is very suggestive. If these two points which I have briefly mentioned are worthy of consideration, it seems to me that they should be taken broadly; that is, that overproduction and overbuying mean not only the placing in our warehouses of merchandise which may become a burden and lead to a cutting of prices, but it means a drifting away from the habits of economy into fields of speculation; that staple finances, as applied to the permanent conditions of the country, is in line with those fundamental principles of honesty and fair dealing which are recognized by solid business men like those here, as underlying a reliable, permanent, continuing, successful business. More than this, it seems to me that the surest way to prevent a revulsion of good conditions is to expect it. (Applause.)

The President: There has recently been formed a combination which has controlled, or substantially controlled, an output which was deemed a luxury not very long ago, but now to many has become almost a necessity. I refer to the bicycle. The American Bicycle Co. is a combination of a large number of individual makers under one corporate management, and is represented upon this occasion by a gentleman who has charge of its sales depart-

ment, so far as jobbers are concerned, who is well known to many of those present through an acquaintance with him of many years, and to whom we shall take great pleasure in listening. I have the pleasure of introducing to you Mr. J. A. Carter, of the American Bicycle Co.

Mr. Carter addressed the Association as follows:

ADDRESS OF J. A. CARTER.

Mr. President and Gentlemen of the National Hardware Association: Present business conditions; are they likely to continue? The greatest problem of human life is: After death what? For ages this problem has confronted mankind, and as yet no man has been able to satisfactorily solve it. So in the business world for the past fifty years; in fact, ever since this country has been making rapid strides in development, demonstrating to the world that we are fast becoming the greatest producing country of the age, both in agriculture, mining and manufacturing. The question ever uppermost in the mind of the manufacturer and merchant is: Are present business conditions likely to continue; and it matters not whether the times are good or bad the same question is ever in his mind. If good, he wants to know so as to take the largest possible advantage of an advancing market. If bad, he is equally anxious to know so he may time his sales to meet the depressed condition. This world is full, and always will be full, of people of pessimistic ideas, always depressed, always looking upon the dark side, always fearing some dire calamity.

On the other hand, the one thing that has been the main influence in bringing our country to the front and its present high standing among the nations of the world has been that of the men who are able to look forward into the future, who may perhaps be called optimistic, who, having the courage of their convictions, invest their money, their time and their energy to the building up of an industrial business that shall command the respect of their fellow citizens and the attention of the world. It is to this class of people that the world owes much of its progress.

We are to-day living in what may be called an age of expansion, expansion not only in territorial acquirements, but in all lines of business. Much is being said by the daily press and by politicians in regard to so-called "trusts." The principle that underlies the forming of a co-partnership between individuals is identically the same principle that underlies the forming of these large corporations.

As I have said before, we are living in a so-called age of expansion. In working out its destiny mankind never halts.

No innovation is ever accomplished in a day, nor without opposition. This opposition was made manifest with the advent of machinery in the place of hand labor, and we believe to-day that, broadly speaking, the so-called "trust" is destined to prove itself one of the greatest and best of modern improvements, and that which so many are now crying out against will within the next five years demonstrate to the world that it is a boon in every way to mankind. The business conditions to-day are largely due to its influence and its working in the direction of a larger industrial organization, thereby tending to reduce the cost of manufacturing to a minimum, keeping our factories running throughout the entire year, enabling us to reach out into the markets of the world, dispose of our surplus product, and do away with one of the most serious evils that the business world has had to contend with for the last twenty years, that of overproduction.

The business conditions of to-day are probably more favorable than any which have existed in a long period of years. As to whether they will continue or not lies entirely with the American people. If pessimistic ideas and views are to predominate, if the cry of imperialism is to hold sway, and attain the ascendancy, then we may look for a period of depression such as we have witnessed in the past—the depression of '57, '73 and '93, a period in

business which marked the ruin of thousands of honorable business men, and which would accomplish the same result in the future.

On the other hand, if we can have that feeling of confidence which the business world now enjoys, if we can have a broadening of our markets, reaching out and permeating the whole world, continuing to assume the ascendancy over competition in the foreign market, then we shall have not only a continuance of the present business conditions, but an era of prosperity such as this country has never before witnessed.

As for myself, I believe in the American people, in their good judgment, in the onward march of civilization, in expansion, territorial and business ties, and as I look down the corridors of time and with prophetic ken behold the grand possibilities of the future, with the united country that knows no North, no South, I see not only a continuation of present business conditions, but a condition divested of the cry of the crime of '73, and Edward Atkinson's inferiors, grander, better and open to greater possibilities than any business condition this country has ever been permitted to enjoy.

The President: Before calling on the next speaker, I wish to announce the Auditing Committee: W. H. Cochran, of Pittsburgh; C. D. Scott, of Dubuque; Henry Bode, of Cincinnati, Ohio.

Perhaps one of the largest corporations which has been called to your attention in the address of your president is the Republic Iron & Steel Co. We are fortunate in having a representative present with us to-day from that company. I take pleasure in introducing to you Mr. George A. Baird.

Mr. Baird addressed the Convention, as follows:

ADDRESS OF GEORGE A. BAIRD

"Mr. President and Gentlemen of the National Hardware Association: These changed conditions; are they likely to be permanent? Of course not; nothing is permanent. Many, many years ago, one of the old Romans, who preceded us on this busy earth, said: *"Tempora mutantur et nos mutamur in illis,"* which in Anglo-Saxon reads: "Times are changed and we are changed in them." The same words exactly describe the business conditions which the student of commercial science is studying to-day. There is nothing permanent except taxes. One of the profoundest philosophers the world has produced, Herbert Spencer, has defined life itself to be a combination of changes. I believe it was King Lear—at any rate, it was one of Shakespeare's characters—who said, "World, world, but that thy strange mutations make us hate thee, life would not yield to age." These "changed conditions" will change again. The period of their operation, and the term of their duration, are the subjects which engage our thoughts this time. The man in business does not ask himself so much, "What will the harvest be?" as "How long will this harvest last?" When will overproduction or underconsumption, or lack of confidence, or some other cause or causes which destroy good times and bring in their place what we call "hard" times, again assert themselves?

This is both an interesting and important subject. The business men who recognize that the "tides in the affairs of men" are not of frequent occurrence, and who "get in" on this boom, will make a great deal of money. Those who stay in too long may lose a great deal of money; but, on the principle that "it is better to have loved and lost than never to have loved at all," I assert that he who stays in too long will not have made so grave a blunder as will he who does not get in at all. We meet in our daily walk men so devoid of the sanguine element that they are almost willing to assert that there isn't any boom; at any rate, if they admit there is a boom, you see them reaching with both hands for the bell rope to ring its death knell. One of these days we will be discussing this boom as one of the

has-beens, and our friends will be in the position of the old negro. His name was Moses. He was the butt of many jokes. A large part of his occupation in life was to take care of a law office of a well-known Southern attorney, Colonel Terrill. One morning the Colonel startled Moses by asking him if he had ever seen an elephant. "Has I ever seed an elephant? Well, sometimes I says I is, and sometimes I says I ain't, ever seed an elephant. You see, Colonel, it happened dis way: I was working down on de Widow Simkins' old yeller mule, Liz, to take a turn of corn down to de watermill. I was riding along astraddle o' my turn o' corn, and singing a hymn, and I dun forgot all about a circus coming to town dat day. All of a sudden, old Liz frowned down one of dem long years of hern; thinks I, old gal, what's the matter with you? And before I got dat think out, old Liz frowned down de oder year; and den she bowed up her back and stuck down her head and kicked up her heels, and, Colonel, by de time I got de turn of corn off from my neck and de dirt picked out of my eyes de procession had done gone by. And that is why I sometimes says I is, and sometimes says I isn't seed an elephant." Prosperity's procession will have gone by and our friends will not know whether he has seen it or not.

The most competent judges with whom I came in contact believe that business will be good for some years to come, and they are able to give substantial reasons for the faith that is in them. Their reasons, I assume, are "the changed conditions" referred to in the subject I am discussing. Some of these "conditions" are altogether new in this country. Home supplies of manufactured products have been depleted, and factories and middlemen have been kept busy for several months running overtime to make up the deficit. Heretofore in making up the deficit, the momentum acquired in doing so has caused prices and production to go too far and make a surplus to quickly depress and demoralize the market. If we were to ask an artist to draw a profile illustrating the business history of this country in your time and mine, that profile would show a series of high elevations followed immediately by deep depressions and separated by long stretches of prairie, quite swampy in places. I have already said enough to indicate to you that I do not believe that the future profile will be one long, level, elevated plateau; however, I do believe that the high places are going to be much broader at the top. I believe that our periods of activity and prosperity are going to be of longer duration. I believe that the foreign demand for our products is going to fill up the swampy places and keep the business of this country on a level of prosperity and profit for years to come, and indefinitely defer the time when the home market will be glutted, as it has been in the past. That it will operate in this way is testified to most emphatically by the statistics of exports and by the order books of our large concerns.

The conditions just referred to may be classed among the natural ones. Another condition of importance, to my mind, I would call an artificial one. The elimination of competition by the organization of large manufacturing companies, which have been launched during the last year or more will certainly have an important bearing, and is one of the "changed conditions" the study of which will interest us. I believe there cannot be a panic of any kind without a multitude. Certainly there is much less likelihood of a panic where a few are concerned than where there are many. A herd of cattle will stampede, each running simply because the others run. I am told that five or six cattle will not do so. A cry of "fire" in a crowded theatre will cause a mad rush and crush for the doors. The same cry uttered in the same building when occupied by fifteen or twenty men will simply cause them to make a search for the fire. The student of past booms of the iron business will remember that, when prices began to wane, the fear what some of their thirty or forty com-

petitors might do has led nearly every one of these thirty or forty competitors to do the very things that would tend most to accelerate the decline of prices. If a few did undertake to stem the tide and support the market, they generally found the load too heavy for them to carry. Competitors were so numerous that harmony of action was out of the question. I am disposed to believe that this frightened feeling which came from the weakness of disunion, had as much to do with the creation of some of the panics of the past as any so-called overproduction or underconsumption. If I am right in this, the markets of to day have a protector in the great trade organizations. Where before hundreds of minds had to unite upon a line of policy, now ten are about all that are needed to be consulted. Heretofore, when the bottom fell out of the iron market the Hardware merchant with loaded shelves was left to hold the bag. He had had no part in producing the panic; he was almost powerless to prevent it. The trade combination ought to be his best friend and his most faithful and powerful protector. If a curtailment of production be advisable, we can now have it in a systematic and reasonable way. Heretofore the intentions of the manufacturer were good, but disunion made him worse than powerless.

But now a stronger hand holds the helm, and to the good intentions toward you has been added a power sufficient to avert such commercial calamities as we have known in the past.

It was the constant study of the manufacturer to learn how cheaply he could produce, in order that he might be in a position to sell the manufactured article at a price less than that of his neighbor. His constant aim was, in effect, to threaten his own life with prices which were disastrous to the very capital which he himself had invested. But to-day the conditions are different. At no point all along the line of any manufacturer's market are prices exorbitant. When compared with the prices ruling in the so called "high times" in this country, the prices for all manufactured products to-day are ridiculously low; when compared with the wages that have followed in their wake, the earning capacity of the wage earner is enhanced rather than diminished. With such a healthy showing, the proposition to-day is quite different from that which confronted the manufacturer a year or less. What shall we say of the future? With this great Government of ours directed into other lands, facing problems of government in the far-away East, in the pearl of the Antilles and in the islands of the Pacific; with the great unsettled West and Northwest inviting the immigrant, as well as the manufacturer and producer, the possibilities that are before us assure some degree of permanency.

When Mr. Sherman, that grand old man, who has been and is now respected by all our citizens as one of the greatest statesmen of the age, went into the Northwest and viewed the country, and upon his return seemed dissatisfied with the policy of the Government in reaching out her arm of protection to the struggling people in the Philippines and in Cuba, he gave as his reason for his opposition to this policy of the Government that there were yet so many thousands of acres of untilled soil and of unsettled country within the domain of this Union, that generations yet unborn would have problems to solve without reaching out into other lands to take upon themselves the questions of government there. But when we travel through the sunny South-land, and notice how within the past decade that dreary land has been transformed into a new earth, and how the hum of the wheels of industry are heard everywhere, where ten years ago naught but the sighing of the wind through the pines could be heard, we learn in what a short time wondrous transformations can take place in this country.

So, in conclusion, let me say that I see before me the Nicaragua Canal cut through the isthmus upon our South,

and the ships of the Atlantic sailing through this channel up into the Pacific seas, and a great seaboard developing upon our Pacific coast, which shall outrival the seaboard of the Atlantic, and the forests and the prairies are teeming with life, the noise of the engine and of the factory wheel and the rattle of the cab wheel are heard everywhere; new cities have been built, new railroads have been constructed and new inventions have been devised and put into effect in the Northwest and the West and the Philippine Islands and Hawaii and the Pearl of the Antilles, and their people are assembling toward the close of the 20th century in one grand convention, and I see them joining hands with the people of the East and of the North and of the South, and I hear the century bells ringing out the 20th century and ringing in the 21st century, and the burden of the song that they sing is that prosperity hath been written upon our banners all the century through.

The President: I have the pleasure of introducing to you James D. Foot, of the Kearney & Foot Co.

Mr. Foot addressed the Convention as follows:

ADDRESS OF JAMES D. FOOT.

Mr. President and Gentlemen of the National Hardware Association: These changed conditions. Let us first consider the conditions as they exist and the features that surround them. The most optimistic manufacturer or jobber in the year of '97 and '98 did not for one moment imagine the immense advance in business that has taken place and is now with us and likely to be for six months to come, and the consensus of business opinion to-day is that we must for six months more experience present conditions with following years of business activity, but not of course up to the present high pressure point. Indeed, we are now at the parting of the ways, when men of sound business judgment, on the one hand, counsel conservative restraint; on the other hand, advise free purchases at the present prices, with a still further rise in the market to be expected. There are good arguments on both sides, but my time is too limited to bring them up for consideration. I must proceed to consider the conditions that surround us.

We find the markets still short of raw material, and the finished products in about everything sold or handled by the Hardware and metal trades. We have to a certain extent a jobber's market, and yet the jobber cannot replace merchandise sold, except at a largely advanced cost, and the retailer in turn finds his shelves depleted by the consumer, and is troubled to replace his stock for immediate sale, not the cost of same, but inability to get the goods the chief factor confronting him. Railroad construction and equipment, vast mining enterprises, large building projects, ship building, and a constantly increasing export business, are the foundations and environments that now uphold and surround the manufacturer and dealer alike.

Are they likely to be permanent? This leads us to consider the past, and we must all admit that there are distinct periods of prosperity rising to the dizzy height of speculation and overproduction, and then tapering off some times too rapidly, to years of dullness and business depression. We are bound to have dull times again—let us hope that they may not come too soon.

The greatest menace to good business we now confront is the wholesale forming of combinations and consolidations in all lines of manufacture. Largely over-capitalized, they may in the present rush be able to pay dividends, but what are they to do when trade declines and they are left with excessive capitalization, largely reduced sales and reduced incomes? They may reorganize and reduce capital, but many must suffer in the paring down, and indirectly general business will suffer. No consolidation has been effected by the throwing out of many experienced men. They must find a living, and what more natural than for them to seek capital and develop opposition? They can and will find the money, and also a market for

their goods. Perhaps too arbitrary methods on the part of consolidation towards the trade will make the trade free buyers of the opposition. Overproduction will follow, as a natural result, and after that the crash.

This is not a pleasant argument for me to make, and I wish I could feel there was little fact in what I say. From my point of view, business through trusts and combines is on a false basis—the past shows failure after failure with business conducted on these lines. Since the time that France tried to syndicate its railroads many years ago, up to the present there has been but one combine of purely home growth to stand the test of time—the Standard Oil Co. That has succeeded on a business basis, and I think principally because it came into being with a new product, grew up with it, developed it in all its branches, obtained railroad concessions not granted to its competitors, and gradually forced itself into a position where competition was impossible, owing to special concessions conceded it and a complete knowledge of the product it marketed.

Years of prosperity are undoubtedly ahead of us—the development of the far East, our entrance into the markets of the Continent, the African and South American countries, all point to increased business, which will help to

JAMES D. FOOT.

keep our mills and factories going, but back of it all is that menace to healthy business conditions—the all-absorbing trust, combine or consolidation.

The President: I regret very much to announce that the other gentlemen, whose names are mentioned on this programme, are not present with us, consequently we cannot hope to hear from them this afternoon. Mr. Clark, of the American Steel Hoop Co., is one of the prominent members of the Entertainment Committee, and he is detained on account of his connection with it. Mr. Neidringhaus, I am sorry to state, is unable to be here on account of death in his family. Mr. Lambert was uncertain as to his ability to be present in any event, although he has made arrangements to have some one else take his place. I am sorry to say they have not done it.

We are approaching the time for adjournment. The secretary has some announcements to make to you.

The secretary announced to the members that the railroad secretary would be in his office at the close of the meeting, where the members could arrange their transportation.

Thereupon the Convention adjourned until 10 A. M., November 16th.

THE SMOKER.

Wednesday evening, November 15th, was devoted by the delegates to attending a Smoker tendered by the Pittsburgh manufacturers, and which took place in the large dining-room of the Monongahela House, over 350 being

present. The committee having charge of the enjoyable affair provided a unique entertainment.

The invitations to this smoker consisted of a very suggestive tag, to be fastened to the delegate by the usual string, with the motto, "Take me in." As the design represented the original Fort Pitt of historical renown, the "take me in" must have had reference to the all-prevailing fluid of the brew of Gambrinus. It was a pleasant take in.

Each guest was presented upon entering the doorway with a long stem, flexible tube pipe, and with a package of tobacco attached to it calculated to furnish sufficient of the worshipped weed to provide an evening's enjoyment all by itself. The guest then making his way to a seat at one of the numerous tables provided for the assembled groups found himself placed opposite a handsome bier stein, which, in connection with the pipe and tobacco, were intended as souvenirs of the occasion, and left the hall when the guests departed in company therewith. A fine band was in attendance throughout the evening, and in connection with a well-assorted vaudeville show, singing by a well-trained quartette, and also by a quintette equally as well provided; these were assisted by professional talent from the local theatres, developing an evening of enjoyment long to be remembered.

One of the features of the Smoker, for which preparation had been made, was the printing of a number of songs, to be rendered during the evening by the combined efforts of the assembled delegates; but someone who had heard the vocalizing at previous conventions must have been afraid the boys would bring down the house, for professional talent superseded this part of programme.

The continued prosperous welfare of the local manufacturers was drunk in bumpers of wine-punch, which were liberally supplied; or in the bountiful filling of the souvenir steins with its most natural refreshment, lager bier. As the fun kept growing fast and furious as the night advanced, many of the guests found "the wee sma' hours ayant the twal," before seeking their welcome couches.

THURSDAY MORNING SESSION.

The Association met in Executive Session, in which to receive the reports of several committees that were not reached previously.

The consideration of the report of the Executive Committee was interrupted by the President, who said:

Gentlemen, We heard yesterday from a representative of the Canadian Wholesale Hardware Association. We had hoped to hear from the Hardware Association of Great Britain, but were disappointed in that. We are fortunate in having with us this morning a representative from the Hardware trade of one of Great Britain's largest colonies, Australia. It is a very great pleasure to us to have him with us. I take pleasure in introducing to you Mr. A. Asher Smith, who is a delegate from the Australian Hardware Association to the recent Commercial Congress in Philadelphia. (Applause.)

Mr. Smith addressed the Convention as follows:

ADDRESS OF A. ASHER SMITH.

Mr. President and Gentlemen: I thank you very heartily, indeed, for the kind manner in which you have received the expression from your President. I can assure you that it is with the utmost gratification that I am able to be present at this gathering. As an ironmonger—as we call them in England and Australia—it is a pleasure for me to meet those engaged in the same business in other parts of the world, and it will be pleasant for you to learn that the goods manufactured by American manufacturers are daily becoming more and more interesting to us in Australia. (Applause.)

It is an absolute fact, gentlemen, that we regard America, in a very large measure, as the future source of our supplies in the Hardware trade. (Applause.)

What we do want the manufacturer to do is to regard Australia as part of his domestic trade, and treat us in the same liberal spirit in which he treats his domestic trade; that is as I understand it, gentlemen.

Now, we are a very long way off, and it is more difficult for us to estimate our requirements than it is for you, gentlemen; therefore, we are at a disadvantage compared to yourselves; at the same time, if the American manufacturer will only give to the question of shipping facilities the attention which is necessary and advisable, I am perfectly sure that the distance which separates Australia from America will be very much lessened. As I say, there is a disposition, a feeling, in Australia, entirely in favor of the American manufacturer, and it would not be difficult for the American manufacturer to extend his operations in that country. As I have said before, gentlemen, it is very pleasant for me to have had the opportunity of addressing a few words to such a gathering as this is, and I hope that in the future in Australia we will feel more closely related to the Hardware dealers in America. (Applause.)

The President: These remarks have been very interesting, and I would like to extend to you the privilege of the floor during the time of our Convention, and participate in all the festivities that the manufacturers of Pittsburgh are going to favor us with.

At the conclusion of the consideration of the reports of the various committees, the Convention adjourned, to meet again at 8 P.M., to take up the programme previously arranged for 2 P.M., a change having been made in the arrangements, in order that the Convention could accept the invitation extended to them by the Pittsburgh manufacturers, to visit during the afternoon the Edgar Thomson Steel Works, of the Carnegie Steel Co., Ltd., and the electric plant of the Westinghouse Electric & Mfg. Co.

THURSDAY AFTERNOON.

The visit of this vast army of delegates to these two representative plants was an instructive object-lesson to very many of those who formed the party. A special train was provided for the occasion, and with an interested throng of over 350 guests who enjoyed every phase of the industrial instruction to be found in the investigation of such unexampled facilities for the production of national wealth which at the present century's close finds us the most famous industrial country on the face of the globe, controlling the vast iron and steel markets of the world, and establishing the prices by which this great portion of the world's commerce is governed. In the visit to the Edgar Thomson Steel Rail Mills was seen the entire process of manufacturing steel rails from the moment when the converter was charged with the melted pig-iron combined with the limestone and other constituents of the charge; and saw the other operation which in twelve minutes turned that mass of melted iron into steel, from which it was cast into ingots or huge billets by the aid of an immense ladle and travelling crane; saw the train of cars loaded with the cases or moulds of melted steel taken along to where by passing the cooling process that adds to their solidity they are eventually passed to the rail mill proper, where, without having lost heat, in a succession of operations of rolls and compresses, they are finally passed on one side as completed rails, even to making them uniform in length by the cutting off of the ends through the operation of a circular saw. And most surprising of all, instead of this immense plant requiring for the purpose hundreds of men as in the old days when iron rails were the product, scarcely more than a score of them seemed to be needed to guide the work, which was handled by automatic machinery, in which electricity furnished the controlling power.

In the Westinghouse Electric & Mfg. Co.'s works we saw the complicated product which has made this plant achieve

a world wide fame; and saw evidences of an immense industry requiring in this one plant, as we learned, the labor of upwards of six thousand men. The special train that took us out brought us back again in due season for our evening session after refreshing the inner man. No visitor to those immense establishments but is impressed with the vast enterprises with which the name of Pittsburgh has ever been associated, an epitome of which is given in a recent volume on the subject, by Samuel Harden Church, and published by G. P. Putnam's Sons, New York. The historian says:

"Pittsburgh has grown in the strength of giants until it now embraces in the limits of the county a population of over one million. The tax valuation of her property is \$554,000,000. Her share is more than one-half of the whole production in the United States of steel, steel rails, coke, oil, plate glass, glassware, harness-leather and iron pipe. She mines one-quarter of the bituminous coal of the United States. She has 2500 mills and factories; with an annual product worth \$250,000,000, and a pay-roll of \$75,000,000. Her electric street railway system multiplies itself through her streets for 250 miles. Natural gas fuel is conveyed into her mills and houses through 1000 miles of iron pipe. Her output of coke makes one train ten miles long every day throughout the year. Her tonnage by river and rail exceeds the tonnage by river and rail of any other city in the world; it is equal to one-half the combined tonnage of the Atlantic and Pacific coasts. Her rail tonnage is three times as large as that of New York or Chicago, double that of London, four times that of Paris, and greater than the combined tonnage of New York, Boston and Chicago. Two hundred and fifty passenger trains and six thousand loaded freight cars run to and from her terminals every day. Nowhere else in the world is there so large a Bessemer-steel plant, crucible-steel plant, plate-glass plant, chimney-glass plant, table glass plant, air-brake plant, steel-rail plant, cork works, tube works or steel freight-car works. Her armor sheaths our battleships as well as those of Russia and Japan. She equips the navies of the world with projectiles and range-finders. Her bridges span the rivers of India, China, Egypt and the Argentine Republic; her locomotives, rails and bridges are used on the Siberian Railroad. She builds electric railways for Great Britain and Brazil, and telescopes for Germany and Denmark. Indeed she distributes her varied manufactures in the channels of trade all over the world."

THURSDAY EVENING SESSION.

The Convention was called to order at 8 p. m. The president announced that it would be an open session, and guests as well as members were invited to participate. The subject for discussion assigned for the evening was:

"The Cash Discount? Should it be Abolished?"

A. D. Clinch, of Underhill, Clinch & Co., of New York, opened the discussion in the following remarks:

The time of this Convention cannot more profitably be employed than in a thorough discussion of the subject of cash discounts. All manufacturers should be asked to incorporate in their terms of sale a cash discount of not less than two per cent. This condition should be readily granted by the manufacturers, because it would be no burden on them, for they can embrace it in their estimated costs, and when their customers do not take advantage of it, they receive the additional profit.

To the jobbers it is of permanent importance that the manufacturers make these terms, because, as no doubt it is the experience of all, a very small proportion of our customers take advantage of the cash discounts, and consequently the cash discounts in purchasing show a very handsome profit in themselves. But to make the profit more profitable it will be necessary for the National Hardware Association to secure the co-operation of all its members.

The terms I would recommend are: On all purchases between the 1st and 15th of the month, 2 per cent. for cash if paid for no later than the 20th of the current month; and all purchases between the 15th and the end of the month, 2 per cent. for cash if paid for no later than the 10th of the succeeding month. It is only just to the jobbers that these conditions should prevail, because I believe it is the experience of all that there are many customers who have to be carried along, and the cash discounts in purchasing will in part pay for the extra risks and trouble.

Mr. Clinch was followed by a general discussion, in which the speakers expressed their views, in part as follows:

Chas. W. Emery, of Van Camp Hardware & Iron Co., Indianapolis, Ind., said: My idea is (and I speak personally and from what I have heard) that the manufacturers feel that a two per cent. cash discount in ten days is a tax upon the business which they desire to eliminate. A two per cent. cash discount in ten days, or net sixty days, is a discount at the rate of 15 per cent. a year. They object to giving 15 per cent. a year when they can borrow money at 6 per cent. or less to carry accounts until they mature.

I believe that a majority of jobbers look at the two per cent. which they have been getting for discounting their

CHARLES W. EMERY.

bills in 10 days after they are billed as a source of income.

If you make the terms net cash in 30 days the jobber who in the past has been discounting his bills has no advantage over his slow-paying competitor. I believe that this is another inroad into the income of the jobber which cannot be overlooked or ignored and should not be conceded without a united protest upon our part.

The President then called on Frank L. Clark, of the American Steel Hoop Company for some remarks.

Mr. Clark said: It seems to me it does not make much difference whether goods are sold on thirty, sixty or ninety days; it is always figured in the cost of making goods. Where two per cent. discount is allowed, the two per cent. is always figured in the cost. In my opinion, we would all fare better if everybody was on a cash basis.

R. W. Shapleigh, of A. F. Shapleigh Hardware Co., St. Louis, said: I don't believe the manufacturers recognize the conditions that exist with the jobbing trade in changing their terms so universally. It is a rather difficult matter for us to adapt ourselves to the changed conditions.

The President invited H. B. Lupton of the American Steel & Wire Company to come forward and address the Convention.

Mr. Lupton responded to the invitation as follows: As the matter appears to me, it is a mere matter of interest. Sixty days and two per cent. off, 10 days, is a relic of 12 and 15 per cent. money. Allowing two per cent. in 10 days, that is two per cent. interest, we are allowing for fifty days' use of money; that is 14 per cent. a year. That

is more of an interest, putting it flatly upon that basis. than the manufacturer feels he can pay. If he cannot get money at less than 14 per cent. he had better go out of the business.

Charles M. Biddle, of Biddle Hardware Co., Philadelphia, Pa., gave his views as follows: I think it is a good time for the National Hardware Association to take up this subject of credits. I think that we might be able to shorten the credits and possibly adopt a thirty-day basis, but I think the way the manufacturers have done it is going at it in the wrong way.

I think that eventually the manufacturers that are now attempting to get thirty days will find that they will fail to get their returns in thirty days, and they will adopt some system giving an extra discount.

John B. Varick of John B. Varick Co., Manchester, N. H., said: I think we are rather going backwards as far as prompt payments are concerned. History repeats itself. After the Civil War everything was prosperous. They get down to a hard cash basis almost invariably. Well, as times changed a little, they did not change the price so much—they began to offer sixty and ninety days and four months. During these prosperous times we might get along very well on thirty days, but I think it will defeat itself.

Mr. Garrett, of the Atlas Tack Co., was invited to address the Convention.

Mr. Garrett replied as follows:

I know that the sentiment among the manufacturers is in favor of this change; but that has not prevented me from saying to them what I should say to you, that I don't believe that the step they have taken is very well advised or properly taken.

There ought to be some reasonably sharp line of demarcation between the man who pays his bills promptly and the man who does not. If you keep your eyes on your bad debts and figure them out you will find that the man who fails upon you is the man to whom you have extended long time.

R. A. Kirk, Farwell, Ozmur, Kirk & Co., St. Paul, said: This I regard as a subject of a great deal of importance. It is a policy of the manufacturers that we will have to meet for some time to come. The prominent thing for us to consider is what will we do to meet this issue?

The new terms proposed consist in simply lifting the price of goods one peg higher, and we must keep pace with it, and as we come to sell our goods we should bear in mind that those goods have gone up.

Whether it is practicable or not in some locations for the jobbers to adopt thirty days' terms or not I cannot say. It may be in certain localities this can be done. It cannot be done universally. It cannot be done in the section of country from which I come.

James D. Foot, of Kearney & Foot Co., New York, said: I wish to put myself on record as endorsing to a great extent what has been said by Mr. Garrett. Where money is plentiful cash discounts are not desirable, but I think at all times there should be a proper cash discount. Make that what you will, but something definite should be figured on.

W. T. Graham, of American Tin Plate Co., said: I have not anything to say upon this subject particularly, except to state that the regular terms in selling tin plate to-day are as they have been for many years—one per cent. for cash in ten days.

It has occurred to my mind that this cash discount is something of a trade discount. I think that that might as well be taken into consideration. I think the discount varies in the different trades. There is another thing that might appeal to me in our business, and that is the question of credit. We would have some difficulty in settling some questions we have to settle if our terms were absolutely thirty days without any discount for shorter payment.

W. W. Supplee said: I believe, gentlemen, that reducing the time to thirty days without any cash discount is one of the greatest hardships that could be placed on the Hardware trade. It is impossible for the average retail trade to pay in thirty days; you are obliged to carry them. I think we might disabuse our mind of making it practicable in the various sections of our country to bring our customers to thirty days.

James H. Ritter, of Biddle Hardware Co., Philadelphia, Pa., presented a resolution, to which Mr. Brace Hayden offered a substitute, which was accepted, and the As-

EX-PRESIDENT W. W. SUPPLEE.

sociation, after a short discussion, adopted it unanimously in the following resolution:

Resolved: That it is the sense of the National Hardware Association that the discount, two per cent. for cash ten days, formerly given by the manufacturers of steel and iron goods be not construed as bank interest, but as a premium for prompt payment and an insurance or protection of credits; and, further, that such or similar discount be retained where still allowed, and that we urge its restoration where it has been discontinued.

On request of several members, the President asked for a vote of the manufacturers present on the resolution adopted, and it was unanimously approved by them, with the exception of one dissenting vote.

On motion, the Convention adjourned until Friday at 10 A. M.

During the progress of the Convention a number of handsome souvenirs were distributed to the delegates by the general manufacturers in attendance who desired in this way to emphasize the harmonious relations now existing between them and their friends, the jobbers. Among the souvenirs we noted from the Reading Hardware Co. a very handsome bronze inkstand, with two ink-wells and

ornamented with a pincushion; a bronze ash-receiver, and a bronze paper-weight in the form of a lizard. The Nicholson File Co. presented a very handsome manicure file in a silver case, the cover of which was secured by a tiny chain. The American Cutlery Co. presented a very handsome envelope-opener, nickel-plated, with pearl handle; E. C. Atkins & Co. an extremely artistic calendar in water-color designs, showing the costumes of different decades of the

JAMES H. RITTER.

present century; the "American Artisan" gave away quite a number of tape measures and steel rules to show the appreciation of their representative in the enjoyment of the whole affair.

The McKinney Mfg. Co., of Allegheny, Pa., presented to each of the delegates in attendance a combined diary and memorandum book for 1900, bound in leather in attractive style. This is a souvenir sure to be in evidence for an entire year.

FRIDAY MORNING SESSION.

On Friday morning the session was devoted principally to the selecting of officers for the ensuing year. The names submitted by the nominating committee appointed for the purpose were elected unanimously, the following being the result:

President, John Bindley; Bindley Hardware Co., Pittsburgh.

Vice-president, R. W. Shapleigh; A. F. Shapleigh Hardware Co., St. Louis.

Second vice-president, Brace Hayden; Dunham, Carrigan & Hayden Co., San Francisco.

Secretary-treasurer, T. James Fernley, Philadelphia.

The new Executive Committee consists of:

W. R. Belknap, of W. B. Belknap & Co., Louisville.

P. E. Strauss, of Fitz, Dana & Co., Boston.

J. D. Moore; Moore & Handley Hardware Co., Birmingham, Ala.

Samuel A. Bigelow; Bigelow & Dowse Co., Boston.

R. A. Kirk, Farwell, Ozmun, Kirk & Co., St. Paul.

John C. Koch; John Pritzlaff Hardware Co., Milwaukee, Wis.

The first three named being elected to fill vacancies and expiring terms on this committee.

The newly elected officers were called to the platform and they expressed their high appreciation of the honor bestowed upon them.

The retiring president, Mr. Bishop, expressed his regret at being obliged to decline the honor of continuing to act as chief executive of the Association, but would continue to give much of his time in its behalf.

During the session the Association presented the retiring president with a handsome gavel in appreciation of his services.

FRIDAY AFTERNOON SESSION.

The Convention was called to order at 2 P.M. The first business taken up was selection of next place of meeting. Old Point Comfort, Va., Richmond, Va., Cleveland, Ohio, and Philadelphia, Pa., were suggested.

The advantages offered at the various points were discussed, and Richmond, Va., was finally selected as the place for the next meeting.

The following resolutions were passed unanimously.

Resolved: That the thanks of the National Hardware Association are due and are hereby tendered to the manufacturers of Pittsburgh, and especially to their entertainment committee, for the most generous hospitality bestowed upon us during our stay in this great and enterprising city of Pittsburgh. We shall carry with us for all time a most hearty appreciation of the courtesies extended.

Resolved: That the thanks of the National Hardware Association be hereby tendered to R. M. Repp, of the Logan-Gregg Hardware Co., Pittsburgh, for his most efficient services as R. R. Secretary of the Convention.

Resolved: That the thanks of this Association are hereby tendered to J. H. Van Newkirk, of the Russell & Erwin Mfg. Co., for his efficient services as General Secretary of this Convention.

Resolved: That the thanks of this Association are hereby tendered to the managers of the Monongahela House, who have so efficiently provided for our entertainment during our stay in this city.

Resolved: That the thanks of this Association are hereby tendered to the jobbers of the cities of Pittsburgh and Allegheny for the beautiful badges which we are now wearing and we shall cherish as a token of their appreciation.

Three cheers were given President Bishop for his efficient services and the Convention adjourned after singing the long meter Doxology.

THE NEW PRESIDENT.

John Bindley, the new president of the National Hardware Association, was born in Pittsburgh, Pa., October 26, 1846, being descended from good old English stock. His father was a prominent builder at that period. After attending the schools of Pittsburgh, and graduating therefrom, he entered the employ of John England, who was engaged in the Hardware business, the date of his advent being June 2, 1862. After remaining in his employ up to 1868, he was taken in as a partner, and the firm name was changed to England & Bindley, and under this title con-

PRESIDENT JOHN BINDLEY.

tinued until 1877, when by purchasing the interest of Mr. England, Mr. Bindley assumed the entire business, which was continued under his management, the name being changed to the Bindley Hardware Co. The incorporation of the concern under that name occurred in 1890, since which time at various periods his assistants have gradually been added to the personality of the company, which is now one of the most prominent concerns in the United

States. Mr. Bindley is largely interested in Pittsburgh real estate, and is in possession of independent means not connected with the business. He has always been regarded as one of the leading citizens of Pittsburgh, noted for his charitable efforts, which he has invariably accomplished without ostentation. He has held many positions of prominence, among which he is a director in the Duquesne National Bank, and is also interested in the firm of Marland, Neely & Co., Ltd., who are Bolt and Nut manufacturers of Pittsburgh; is prominent in the government of the Duquesne Club, one of the leading social organizations of Pittsburgh, and is more or less identified with a number of business enterprises of importance in his native city. He is president of the Pittsburgh Chamber of Commerce, and takes great pleasure in being an associate member of the Art Club of Pittsburgh, taking great interest in art and musical matters that have become such prominent features of the social life in the best society of that city. Under his administration, the Association may certainly feel that their interests are being carefully and conscientiously attended to, the position of president of this important organization being one to call for the best efforts on the part of all those associated in its government.

THE PRESS.

Colonel James R. Nutting, of Sickels, Preston & Nutting Co., Davenport, Iowa, was the chairman of the Press Com-

COL. JAMES R. NUTTING.

mittee, and the members of the press attending the Convention feel under many obligations for his unvarying kindness.

Among the members of the industrial press who were present in the Convention were the following:

Richard R. Williams, George W. Cope, Robert A. Walker, representing the *Iron Age*, New York.
Daniel Stern, *American Artisan*, Chicago.
Henry Hopkins, *Hardware*, New York.

AMONG THOSE IN ATTENDANCE.

The following manufacturers and their representatives participated in the Convention:

American Axe & Tool Co., New York: Charles H. Wier, A. G. Twigg, Frank E. Corey.
American Wringer Co., New York: G. H. Jantz, James Richens.
Atha Tool Co., Newark, Edward Ingalls.
E. C. Atkins & Co., Indianapolis: N. A. Gladding, Julian W. Perkins.
Atlas Tack Co., Taunton, Mass.: J. P. Dabney, C. H. Paul, Geo. F. Howard, G. G. Roberts, Jr.
G. & H. Barnett Co., Philadelphia: Tom Almgill, J. M. Hottel.
Caldwell Mfg. Co., Rochester: Allen Boucher.
Champion Steel Range Co., Cleveland: C. H. Miller.
Cleveland Stone Co., Cleveland: H. W. Caldwell.
Corbin Cabinet Lock Co., New Britain: Geo. W. Corbin.
P. & F. Corbin, New Britain: Chas. H. Parsons, W. E. Bartholomew, Frederick Fee, J. E. Dean.
Henry Disston & Sons, Philadelphia: Samuel Disston, Harry C. Disston.

Fox Machine Co., Grand Rapids: Geo. W. Leary.
Gender & Paeschke Mfg. Co., Milwaukee: T. A. Musgrove.
Iowa Farming Tool Co., Fort Madison, Iowa: F. S. Kretzinger.
Kearney & Foot Co., New York: James D. Foot, W. S. Tragle.
Kelly Axe Mfg. Co., Alexandria, Ind.: James P. Kelly, George T. Price.
Lansing Wheelbarrow Co., Lansing, Mich.: D. J. Mahoney.
Lovell Mfg. Co., Erie, Pa.: A. W. Walker, Chas. S. Meacham.
H. M. Myers Co., Beaver Falls, Pa.: Chas. W. Hubbard, Charles H. Myers, Charles S. Hubbard.
National Sewing Machine Co., Belvidere, Ill.: H. W. Darling.
National Stamping & Enameling Co., Milwaukee: A. L. Johnson.
National Tube Co., New York: George S. Garritt, A. S. Matheson, A. M. Lally, F. J. Hearne.
Nicholson File Co., Providence: Edmund D. Fisk.
Oneida Community, Ltd., Niagara Falls: P. B. Noyes, E. D. Smith.
Charles Parker Co., Meriden: W. H. Lyon, Frederick Pease.
Peck, Stow & Wilcox Co., New York: W. R. Walkley.
Fayette R. Plumb, Incorporated, Philadelphia: Fayette R. Plumb, W. R. Howell.
Reading Hardware Co., Reading: J. E. Harbster, M. Harbster, G. N. Jacobi, F. L. Stellwagon, W. M. Bennett, Orton Hill.
T. Rowland's Sons, Philadelphia: Howard Rowland.
Russell & Erwin Mfg. Co., New York: Geo. J. Loughton, E. H. Mansfield, B. A. Hawley, Thos. J. Usher, Theo. D. Peck, J. H. Newkirk.
Smith & Hemenway Co., New York: Landon P. Smith.
Stanley Rule & Level Co., New Britain: H. S. Walter.
Stanley Works, New Britain: Geo. P. Hart, L. H. Pease, D. B. Woodbury.
Van Wagoner & Williams Hardware Co., Cleveland: C. S. Van Wagoner, L. F. Blue, J. J. Teeple, A. A. Fonda, C. T. Stork.

THE BANQUET.

Friday evening was devoted to the crowning act of hospitality, in the welcome given by the Pittsburgh manufacturers, who, surpassing every previous performance of the kind, culminated their good wishes in a most enjoyable banquet at the Hotel Schenley, the finest hotel in Pittsburgh, situated near Schenley Park and the Carnegie Institute.

It was a superb affair, and 420 participants thoroughly enjoyed the feast of good things within easy reach. The banquet proceedings commenced promptly at 8:30, when the delegates and their hosts formed in procession, and, proceeding to the great banquet hall of the hotel, took the numbered places allotted to them.

In the galleries the ladies, who had accompanied a number of the delegates, shed the lustre of their approval on the scene of enjoyment below, while enjoying a light luncheon with wine provided for their use, the beauty of their costumes and their abundant smiles giving the only additional enjoyment the scene of festivity could call for. All the tables were handsomely decorated with an abundance of floral display, which was demonstrated in a profusion of chrysanthemums and smilax, surrounded by ferns and other similar decorations, which made it a scene of enchantment. At every place upon entering was found an extremely artistic and handsomely printed menu, consisting of sixteen pages and fastened with ribbon.

MENU.

Oysters. Haut Sauterne. B. & Z. 1874.
Green Turtle. Amorosa Sherry.
Boiled Red Snapper, Hollandaise Sauce.
Cucumbers.
Supreme of Chicken, a la Lucullus. Cliquot, Ruinart.
Filet of Beef, a la Ambassade. Dry Monopole.
Potatoes, en Surprise.
Punch, a la Russe.
Roast Quail.
Lettuce and Tomato Salad.
Bombe Jardinier.
Fancy Cakes.
Fromage, Fruit, Cafe Noir.
Liqueres.

The banquet was opened by singing a verse of the favorite hymn, "America." The service was admirable, and could not have been surpassed. It was accompanied by music from an orchestra placed nearby. Just about the time the banquet was concluding, with the exception of the coffee, which was then being served, Andrew Carnegie, the wealthy philanthropist, who had been invited to address the assembled guests, entered the hall. He was greeted with great enthusiasm, the entire assembly arising, and giving every evidence of their appreciation of the favor of listening to this whole-souled humanitarian. Mr. Carnegie took a seat at Table B, and in a very short time after the orchestra played "Auld Lang Syne." The entire audience arose, and while standing sang with considerable feeling this good old-time song. Mr. Carnegie was touched by this demonstration of appreciation apparently, for he stood holding his glass above his head and did his best to do his share of the singing. The ladies were noted also for their enthusiasm, and added to the spirit by waving their handkerchiefs and other demonstrations of approval.

Shortly after eleven, the members, after lighting cigars, which were abundantly provided, and were enjoying their ease after their close attention to the good things which had preceded, John W. Hubbard, the master of ceremonies, called the assemblage to order, and introduced Judge Joseph Buffington, of the United District Court of Pittsburgh, as toastmaster. It was evident he had made an admirable selection, for the judge was fully alive to the rollicking spirit of the occasion. Almost every word he uttered was of a witty character, and the cheering and demonstrative applause following every small speech of his told only how truly he was, admirably fitted for the occasion. After giving a few humorous remarks that were apropos to the duties for which he had come prepared, he introduced President Bishop, who spoke to the subject of "The Retiring President" amid the applause of all his old associates. Mr. Bishop made a very grateful address, thanking the Pittsburgh manufacturers for their rich hospitality, and also expressing the appreciation of the spirit of welcome, harmony and thorough enjoyment that were the features of this never to be forgotten Convention.

The toastmaster, referring to the conclusion of Mr. Bishop's speech about "welcoming the coming and speeding the parting guest," introduced President Bindley, who called attention to the fact that a year ago he had promised the delegates that an enjoyable visit to Pittsburgh would be the programme of the National Hardware Association, and he hoped that he had fulfilled his promise. He declared it to be his opinion that no more enjoyable or important Convention was on record.

The toastmaster then happily contrasted the material with the ideal, and argued that there were three periods in every ideal, viz., foundation, development and fulfillment. Referring to the idea that wealth was to be regarded as a stewardship, he took pleasure in introducing one who had endeared himself to all hearts, Andrew Carnegie, who, upon arising, was saluted with even more gratifying applause of all present than greeted him upon his entrance. Mr. Carnegie made a very happy after-dinner speech, which is one that it would be very difficult to report in such an appreciative way as that in which it was delivered. He possesses the happy faculty of having a number of apposite anecdotes and convenient illustrations stored away in his brain, so that he can round a period or close a sentence with the most happily chosen allusion, and he did this in his speech to the assembled delegates and other friends in the most enjoyable manner imaginable. Every anecdote that he told had some connection with his remarks, and made it an extremely happy allusion. He thanked the National Hardware Association for electing Pittsburgh's most representative citizen to the high position of President, and among other of his humorous re-

marks he said, "Some are born great, some achieve greatness, and some are born in Ohio, but President Bindley, who was born in Pittsburgh, wouldn't have to be born again."

After he had finished his happy speech the entire audience arose and joined in singing the good, old-fashioned chorus, "For He's a Jolly Good Fellow."

Mr. Bigelow then proposed Mr. Carnegie as an honorary member of the National Hardware Association, and Mr. Bishop, putting the motion for a standing vote of the members present, Mr. Carnegie was unanimously elected as the first honorary member of the National Hardware Association.

Other speakers followed, introduced by Toastmaster Buffington in his happiest style, among whom were George T. Oliver, William Gibson, traffic manager of the B. & O. R. R., who responded to the toast, "Fraternal Reciprocity Between Shipper and Carrier." James Frances Burke of Pittsburgh responded to the toast, "The Last of the Century," and made a very interesting speech, delivered in the happiest manner. Col. Ed. Buford responded to the toast "Fraternal Greeting from the South," a subject with which he was fully conversant, and on one occasion brought forth the ringing applause of the audience. He was followed by Irby Bennett of Memphis, who responded in a very happy and felicitous manner to the toast, "The New South." The many eloquent allusions to the fraternal feelings now existing between the North and South were greeted with every demonstration of approval. The best of feeling prevailed, everything was enjoyed to the utmost, and about 1:30 Toastmaster Buffington in his most admirable manner made the concluding few remarks that closed the most successful Convention ever held by the National Hardware Association, and the recollections of this important gathering were left to be stored among the choice episodes that life retains after our laborious years have passed.

The following committee had the entire affair under their supervision, and acquitted themselves in a manner to cover them with glory:

MANUFACTURERS' COMMITTEE OF ARRANGEMENTS.

John W. Hubbard, Chairman.

Robert Garland, Secretary.

Stephen W. Tener, Treasurer.

Frank L. Clark.

"Queen" and "Pearl" Freezers.

The Samuel C. Tatum Co., Cincinnati, Ohio, whose New York office is with Tower & Lyon, No. 95 Chambers street, are placing before the trade two entirely new lines of cream freezers, which are illustrated in this article. The freezers are claimed to possess great originality in construction from novel improvements made on previous devices with which the trade has become familiar. They are marketed under the names of the "Queen," which is a triple motion freezer, and the "Pearl," possessing only a single motion, and sold at a lower price. Among the advanced ideas that commend them to the dealer the following advantages are claimed: The time of freezing has been materially reduced, as uniform hardness can be obtained in less than three minutes. The labor of accomplishing it is reduced to a minimum. Great simplicity in construction makes the assembling of the parts for use occupy less than a minute. The parts are self-adjusting, being guided into position by the gearing on the under side of the cross-piece, which is shown in Fig. 1. The dasher is self-centering, see Fig. 2, illustrating the dasher of the "Queen" freezer; and if the freezer is started with the dasher out of

position for proper use, by a single turn of the crank it is brought into its proper place. In the construction of this dasher, having an increased number of blades, it is claimed that by its use the cream is made silky in character, thoroughly light and free from all lumps. Another good feature arises from cream thus made—it can be eaten right from the can, as it is unnecessary to set it away to

which fits exactly into a socket to meet it in the cast-iron bottom of the can. The duplex beaters, during the operation of the freezer, are constantly whipping the gradually freezing cream and throwing it against the sides of the can; the wood scrapers as persistently remove it, throwing it to the centre. This constant whipping and beating of the freezing mixture makes it possible in the "Queen" Freezer to reduce the time of perfect freezing to less than three minutes. In Fig. 3 will be noticed, on top of the freezers, a locking device which adds a very simple attachment for holding the crosspiece in a rigid position while the freezer is in use. The free turning of the handle is assured by the

FIG. 1. SHOWING HINGED CROSS-PIECE.

ripen, as is frequently necessary in freezers of more primitive construction. On account of the lightness of the cream produced its bulk is correspondingly increased from equal quantity of material.

In Fig. 3 is given a sectional view of the "Queen" Freezer, illustrating the points referred to above.

Among the original features referred to in its description are: The can top of cast iron is geared directly to the

FIG. 2. SELF CENTERING DUPLEX DASHER OF QUEEN FREEZER.

pinion in the crank shaft, while the upper gear in the cross-piece, acting on the square of the upper end of dasher, drives it in a reverse direction, so that the wood scrapers on each side of the dasher frame scrape the inside of the can in a very thorough and rapid manner. It is so constructed that the fingers or beaters are mounted on a central shaft, having a square formation at its lower end,

FIG. 3. SECTIONAL VIEW OF "QUEEN" FREEZER WITH CRANK.

accurate fit, which is obtained by shouldering the shaft and fastening with a pin or rivet.

The "Pearl" Freezer, which is illustrated in Fig. 4, having only a single motion, is sold at a lower price, and competes more especially with other freezers now on the market. In this Freezer the can revolves, while the dasher remains stationary. A number of the features of the "Queen," with the exception of the accelerated action, are used in its construction, the same care in manufacturing being its strong recommendation. All the parts of either freezer are interchangeable, numbered plainly so that repairs can at all times be obtained, and all parts likely to break in any way are made from malleable iron for greater endurance. Should fly-wheels be preferred to cranks, they

FIG. 4. "PEARL" FREEZER, WITH CRANK.

can be furnished when ordered for any size made, varying in size to the capacity of the can.

"Queen" Freezers are made in all sizes from 1 to 25 quarts capacity, the "Pearl" being made in 12 sizes from 2 to 10 quarts.

Will Archer, the bookworm, through Bangs' catalog looks, for low bids and high purchases form his few vices; but he never cuts the pages of his coveted books for fear when he's dead they'll be sold at "cut" prices.

REVIEW OF THE MARKETS.

Hardware: Changing prices are still commanding the attention of dealers. Stocks, however, are in a condition sufficiently satisfactory to cause in the dealers a desire to realize at the present state of the market, before adding to the inventory so soon to be gone through with. Leading staples hold their own in fair condition and it is doubtful if any radical changes will startle the market at a date more or less remote.

Wire Nails: There have been no changes in prices on this staple commodity to record since the date of our previous issue. The demand is very moderate, and no large orders are being noted. The present quotations are named as follows, f. o. b. Pittsburgh, terms 30 days net:

To jobbers in carload lots.....	\$2 05
To " " in less than carload lots.....	2.07½
To retailers in carload lots.....	3 10
To " " in less than carload lots.....	3.20

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock.....	\$3.25
To " " less than carloads on dock.....	\$3.40
Small lots from store.....	\$3.40 to 3.50

Cut Nails: The tone of the market on Cut Nails is very moderate. The market is not characterized by the same degree of strength as is noted in the wire nail market, the quotations of the Western mills not having so sanguine a look as those of the East. The following quotations represent the present state of the market, and are f. o. b. Pittsburgh, the freight being added to make a net price delivered at destination:

To jobbers in carload lots.....	\$2 60
To " " in less than carload lots.....	2.05
To retailers in carload lots.....	2 70
To " " in less than carload lots.....	2.85

New York business continues quite light with prices nominally as follows:

Carload lots on dock.....	\$2 75
Small lots from store.....	\$2 90

Barbed Wire: The demand at the present time for Barbed Wire for ordinary requirements presents no great activity. No change in price has been made, and the regular quotations remain as follows, f. o. b., Pittsburgh, net cash, thirty days:

To jobbers in carload lots, Painted.....	\$3.40
" " Galvanized.....	3.55
" " in less than carload lots, Painted.....	3.42½
" " Galvanized.....	3.57½
To retailers in carload lots, Painted.....	3.55
" " Galvanized.....	3.70
" " in less than carload lots, Painted.....	3.65
" " Galvanized.....	3.80

Smooth Wire: As the demand for Smooth Wire continues unabated, it being the raw material for so many different lines of manufacture, the market may be considered firm at former quotations, which are as follows, f. o. b. Pittsburgh, terms thirty days, net cash:

To jobbers in carload lots.....	\$2.80
" " in less than carload lots.....	2.82½
To retailers in carload lots.....	2.95
" " in less than carload lots.....	3.05

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

Chicago Spring Butt Co.: An advance in the prices of the Chicago Spring Butts has been made by the Chicago Spring Butt Co. The discount is now quoted 25 per cent., instead of 30 per cent., which prevailed previously.

Carriage Bolts, Machine Bolts, &c.: At a meeting of the associated manufacturers of Carriage Bolts, Machine Bolts, &c., held on the 15th inst., further advances were made in prices of their goods. The printed discounts are now quoted as follows, with an additional 10 per cent. allowed the large trade:

	Discount.	Per cent.
Common Carriage Bolts.....	45	and 5
Machine Bolts, H. P. Nuts.....	50	and 5
" " C. H. & T. Nuts.....	45	and 5
Plow ".....	50	and 5

Poultry Netting: By the concerted action of the manufacturers this staple has advanced, so that many orders have already been booked for delivery, even up to July

1900, at special quantity prices for large orders. The market price on small lots may now be stated at a discount of 75, 10 and 5 per cent. An effort has been made for a concerted action in regard to terms on this line of manufacture, and the terms are now stated to be sixty days, with 2 per cent. discount for cash in ten days, instead of the more strict terms previously mentioned of 30 days net. Freight is allowed on all shipments to all points East of the Mississippi River, and on shipments west of that river, freight is allowed to the crossing point nearest destination. As usual, large orders are given for future sales, with a dating of March 1st, which would naturally cover all shipments made prior to that date.

Lag and Coach Screws. An advance was made quite recently on Lag and Coach Screws, which are now quoted as follows, subject to an additional 10 per cent. to the large trade:

	Discount.	Per cent.
Common Point.....	.65	and 5
Gimlet ".....	.65	

Cordage: In Manila and Sisal Rope advanced quotations are still the feature of the market, on account of the scarcity of the Hemp. Quotations for carload lots are as follows, with an advance of a quarter of a cent for less quantities, f. o. b., New York, Boston or Philadelphia.

Manila, 7-16 inch and larger.....	per pound, 15½ cents.
" " ¾ inch.....	" 16 "
" " ½ and 5-16 inch.....	" 16½ "
Sisal, 7-16 inch and larger.....	" 10½ "
" " ¾ inch.....	" 11 "
" " ½ and 5-16 inch.....	" 11½ "
" Lath Yarn.....	" 10 "

Manila Tarred Rope, 15-thread, is still quoted at 14 cents. Manila Hay Rope, medium, at 15½ cents. "A" grade of Jute Rope has advanced to 7 cents, and "C" grade to 6½ cents. Jute Wool Twine, 4 ply only, per pound, 6¾ cents; all other sizes, 7 cents. There is still a prospect for further advances, as the supply at hand is entirely inadequate for the purpose of keeping the market in a steady condition.

Linseed Oil: Dean Linseed Oil Co. quotes as follows:

In lots of less than 5 barrels.....	47 cents per gallon.
In lots of 5 barrels or more.....	46 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

THE PHILADELPHIA TRADE.

Although it is almost the first of December, the weather, so far, has been that of Indian Summer and this has had rather a retarding effect on the sale of seasonable goods, such as skates and sleds. An exception, however, may be made in the matter of snow shovels which have been in great demand—large quantities have been already sold. A few days of cold weather will stimulate these goods greatly, and the demand will probably be very sharp when it comes.

The market is still marked by a number of advances—many manufacturers who have heretofore refrained from marking up their goods now find themselves compelled to do so by the increased cost of materials, while pig iron rules at the topmost point and structural iron has gone higher than ever before.

While in Pittsburgh last week, the writer was told by a manufacturer he had just sold some scrap iron at \$25 per ton that he was glad to sell at \$9 a ton a year ago. This simply illustrates the strength of the market and the prices that dealers are glad to pay for materials for immediate delivery.

Galvanized poultry netting has scored another advance, and already we hear the manufacturers of wire cloth are largely oversold, and the makers of seasonable goods generally are complaining that, even at present prices, they are not making an adequate profit—all indications are, therefore, pointing to higher figures in some lines.

As is but natural, the higher prices of to-day require more money to be put into general circulation, and the action of the Secretary of the Treasury in purchasing

"Just the Time"

for renewing Porch Furniture, Floors, Front Doors, Furniture, Wood Work, etc., with our brilliant

JAP-A-LAC

IN COLORS

It produces a smooth, hard brilliant finish, and is as lasting as Japanese Lacquer. Samples of finished wood showing the following colors mailed free: Oak, Walnut, Drab, Malachite Green, Ox Blood Red, Spruce, Cherry, Mahogany, Black, Yellow, Ivory and Natural.

Write for our prices and dealers' discount.

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

bonds to the amount of \$25,000,000, will probably have a beneficial effect towards increasing the circulation.

It is earnestly to be hoped that dealers are generally taking advantage of new prices, thereby realizing profits which will put them in good financial shape for the future.

BIDDLE HARDWARE CO.

THE COLUMBUS TRADE.

The same report as to good business may be repeated. We have had to work part of our force at night during the past week to keep up with orders, and there seems to be no let up in the volume of business. The latter part of November we usually begin straightening up stock and re-arranging it preparatory to our annual inventory; but so far we have had no time for any special work along that line. We think all jobbers will find trouble to keep up with the regular business of the day and take account of stock this year. We will all have to stand it, however, as such times do not come around every year. We had on our last change sheet a decline in Babbit metal, pig tin and lead, and our salesmen wanted to know immediately what was wrong. It is such an uncommon occurrence these times to report a decline on an article that it is a surprise. How different from a few years ago, when declines were expected on some goods every week. Now they expect and get advances regularly every week.

We went to the sale of unclaimed freight at the Pennsylvania railroad freight depot last week, but did not buy anything. We were impressed with the fact that carelessness exists somewhere in handling freight, and the question is who loses, the consignee or consignor? We were pretty well convinced that in a great many instances goods are supposed to have been received and are paid for that never were taken from the freight house. Our receiving-clerk told us that there was thirty-one bundles of barn-door rail there that was received at the freight house in April. We advised the manufacturers that it was there, and that it would be sold on the 16th inst. They wired the railroad company to not sell and then began an investigation, and found that one of our competitors had checked the invoices and paid for the goods months ago, and supposed they had received them. One case of goods was sold for \$2.50, and the buyer found on opening that it contained six steam-injectors, worth about \$6 each. No doubt some dealer paid for them and does not know he never received them. We believe that most of the goods that accumulate at the railroad freight houses are paid for, thinking they were received in stock. A careless receiving-clerk can lose a firm many a dollar. We adopted a rule that our receiving-clerk must make a record in his book who the goods come from, the number of cases or articles received and report same to the office, and call off the items to an office man who checks. The receiving-clerk has no knowledge of the quantity the invoices call for. If it does

not tally, he must go and prove his count and report again. Then, if it does not tally, he is informed what the invoices call for, and notation is made on the invoices and shortage or surplus reported to the shipper. A thoroughly competent and reliable receiving-clerk is of the utmost importance.

The weather is like April more than November. Bob Whites are having shot projected at them from all kinds of guns, from the wrought-iron muzzle-loader to the 200 hammerless, and probably one out of twenty-five shot at is hit. If a bird or rabbit was killed for every shell that is shot, there wouldn't be one left in the State, but there are always plenty left for seed.

THE SMITH BROS. HARDWARE CO.

THE CHICAGO TRADE.

We have been very agreeably surprised at the way in which our Fall business has kept up through the month of November. It has been usual for us in former years to expect a much larger Fall business in the month of September than any other of the Fall months, but the first three weeks of November show our trade to be in excess of the same periods of either September or October, hence we expect the footings at the close of this month to surpass almost anything in the way of a month's trade we have had hitherto. In addition to our orders for immediate shipment our salesmen are sending to us a large amount of business for delivery in December and January. The present indications seem to point to the fact that wire doors, window screens and wire cloth may be in short supply early in the year, and, if manufacturers are giving us the correct information, prices of these goods may be higher than the present figure. As an indicator of the fact that the country is prosperous and that people have more money with which to purchase luxuries, we note that the demand for skates, pocket and table cutlery and similar wares is very large indeed; not only that, but consumers seem to be willing to pay for the better grades of pocket cutlery and razors and the highest class of skates.

WELLS & NELLEGAR CO.

THE PITTSBURGH TRADE.

The Hardware Jobbers' Convention closed last Friday night with a banquet in Hotel Schenley. The three days session was filled with important matters and the social intercourse and interchange of views among members individually were perhaps even more useful than the formal sessions. This was the largest convention in the history of the Association and its usefulness and permanence are now fully appreciated and assured. The manufacturers of Pittsburgh laid themselves out to be entertaining and succeeded admirably.

Trade continues active, though a little colder weather would help seasonable goods to move faster.

Spring goods are being sold earlier than usual in anticipation of still further advances, which may, or may not, occur.

Prices are firmly held in nearly all lines and trade is in a satisfactory condition. LOGAN-GREGG HARDWARE CO.

THE BALTIMORE TRADE.

Having left the smoky city after a glorious good time, which is ever present at the great conventions of the National Hardware Association, it is a matter of personal regret to the writer that these good times cannot be enjoyed forever, but must be dedicated to memory, whilst the stern duty of pushing Hardware is again taken up.

The Pittsburgh of to-day is the giant of the nation's cities, every tissue vibrating in concert with the wheels and blasts of industry, and with a tonnage far in excess of any other city on the globe.

Baltimore a little slow, but always beautiful, is feeling the grand breeze of prosperity, and welcomes the shower of orders now falling; although not bulky, they embrace such goods as are profitable, and therefore a pleasure to sell. Collections are about normal. H. W. WEBB & SONS.

THE MINNEAPOLIS TRADE.

Business is keeping up very well. We are having excellent Fall weather; good for the farmer, to finish up his plowing and threshing, and good for building operations,

of which their is considerable of it here at the present time, with excellent prospects for the coming season.

Prices are well maintained, with the exception of nails. There is the same old trouble on them, cut prices being made by one party, and it affects all from the largest jobber away down to the smallest country retailer.

With the customers of the Twin Cities in such excellent shape, meaning the farmers and country dealers, it indicates that the coming year should be a good one.

W. K. MORISON & CO.

THE DAVENPORT TRADE.

Just home from Convention in that great and good, but smoky city of Pittsburgh. With two sessions of the National Hardware Association a day, and more than half of each night a session of some social function planned and generously given by the manufacturers and jobbers of that thriving and most hospitable city. This writer is hardly equal to making a trade report that will be acceptable to the readers of *Hardware*. Your editor was there, and saw personally more than two hundred wholesale dealers and as many more manufacturers of Hardware. He had an opportunity of hearing everything known or imagined on this line of trade by the National "400."

We are glad we are members of the N. H. A. We are glad we attended the Convention. Happy to have met so many old friends, and with making the acquaintance of so many delightful people. We were interested in the discussions, gratified with the results, and pleased with the selection of new officers and with the promotions given to those who have so loyally filled important offices heretofore. With pleasure we look forward to the next meeting at Richmond, and regret that we are not more Methodistically inclined, so we could have our enjoyable meetings quarterly. If this were true, we could have accepted the cordial invitations of Philadelphia, Cleveland and Old Point Comfort, also. To all the good people we met, to the old friends and the new, to the outgoing and incoming officers, to the individual members of the Entertainment Committees, to the manufacturers and jobbers of Pittsburgh, to the representatives of the press, all of whom conspired to make our stay in Pittsburgh so delightful, here is our hand and heartfelt thanks.

SICKELS, PRESTON & NUTTING CO.

THE INDIANAPOLIS TRADE.

The volume of our business continues very satisfactory.

The advance which has been anticipated for some time in the price of Atkins cross cut saws materialized last week.

We believe the majority of merchants will receive it kindly as it covers only a slight part of the advance which the makers are now being compelled to pay for their material.

It will be a matter which the jobbers will regret that the recent advance in Chicago spring hinges decreases the

differential in their favor which was none too great in the past.

We are glad to be able to state that the price of wire cloth for the coming season is being better maintained than in previous years in this section, everybody having the feeling that there will be an advance over the prices ruling at present after January 1st, if not before.

Our sales of skates and weather strip show a handsome increase over last year.

Our sales of stove boards during the past thirty days have exceeded our expectations. Owing to the very large quantities sold last Spring for Fall delivery, we felt that the sorting up orders at present prices would not be large, but in this we were agreeably disappointed.

Our gun department continues to enjoy the largest business in its history. VAN CAMP HARDWARE & IRON CO.

THE DENVER TRADE.

There is little to say in regard to the Hardware business in this vicinity. Trade is good with us, October last being the largest month we ever had in the wholesale business. Up to date we have had an open winter, of rather no winter at all, and business is likely to continue good to the end of the year. Colorado jobbers in every line are singing the same song in a grand chorus. We are glad to hear the echo from our neighbors in every direction.

THE GEORGE TRITCH HARDWARE CO.

THE ALBANY TRADE.

The busy Hardware man will find less time than usually to peruse the trade letters in this issue, as he naturally will wish to thoroughly "read, mark and inwardly digest" the report of the National Hardware Association Convention held at Pittsburgh on the 15th, 16th and 17th inst., and it will be found interesting and instructive. Not only the addresses of the officers and members but the able papers presented by the representatives of some of the largest manufacturers of Hardware and kindred lines in this country, are well worth reading.

The opening session showed the largest gathering of Hardware jobbers and manufacturers ever assembled. In close touch were the dealers from Portland, Me., to Portland, Ore., and from Duluth, on the North, to New Orleans and Texas, on the South, all intent on listening and participating in the discussions bearing on the subject of the distribution of Hardware and metals throughout each one's respective territory.

The fatigue of the sessions was relieved by the "smoker" and banquet in the evenings, and the trip by many of the members in small parties between meetings on the wonderful and speedy steam yacht "Wenonah," under the pilotage of Commodore Painter, to interesting points on the rivers. Traveling at the rate of thirty miles an hour on the water was a rare experience, never before realized, but even this we are told will be eclipsed when the new

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. If you shoot a revolver or rifle you will be interested in our latest output, SPORTING RIFLE SMOKELESS. Write for information.

LAFLIN & RAND POWDER CO.,
NEW YORK.

boat, now being constructed by the same builders, is launched, and is guaranteed to dash through the water at the rate of forty miles per hour. The "Wenonah" is sixty-five feet long by nine feet breadth, with its screw making 400 revolutions per minute. If a passenger is standing, "hold fast" has to be observed, as a slackening of the speed tends to throw one forward without warning.

As a further recreation, the visit to the steel rail mill of the Edgar Thomson Steel Works, where a ton of rails per minute is turned out, and to the Westinghouse Electric & Mfg. Co., where about 6000 men and 1000 women are employed in the manufacture of dynamos and electrical goods, proved most interesting, and could not fail to impress upon the visitors the manufacturing importance of Pittsburgh. The whole week was full of interest, and the dealers no doubt all returned home feeling fully satisfied that it had been well spent.

Trade has continued steady, the demand for season goods requiring the full attention of employees in filling orders. A slight decline in zinc is noticed, and the "sag" of a few points in galvanized sheets has stimulated trade in this article, as it is generally believed that this drop is but temporary, owing to the influence of the spelter market. This easing of price on a single class is offset by an advance in poultry netting over the price fixed a month ago. Believing another advance not improbable, the anticipation of next season's wants would recommend itself.

The approach of the holidays is bringing forward the display of the new and beautiful goods in cutlery, the product of the American manufacturers, as well as those of our English cousins, and the dealers who make elaborate window exhibits of this attractive line will be rewarded by an excellent trade at satisfactory profits.

An improvement in collections is noticed, which makes a satisfactory finale to our trade letter.

ALBANY HARDWARE & IRON CO.

THE SAN FRANCISCO TRADE.

At this writing it is plain to be seen that three prime interests control the attention of the trade, both wholesale and retail—namely, continuance of the prosperous market conditions that have universally prevailed for some months, the Convention of 800 delegates now at work in this city in the name of the California State Association for the Storage of Flood Waters, and the St. Louis meeting of the Interstate Commerce Commission.

The presiding officer of the State Convention is F. W. Dohrmann, of the wholesale cutlery house of Nathan, Dohrmann & Co.; and in a cursory glance at a delegation near the platform, representative of the California Miners' Association, the *Hardware* correspondent noted the presence of W. W. Montague, of W. W. Montague & Co.; Andrew Carrigan, of Dunham, Carrigan & Hayden Co.; Edward Coleman, President Pacific Rolling Mill Co.; John Birmingham, President of both the California and the Hercules Powder Works; and J. W. Power, of Power & Pike, sheet metal merchants.

The object of this convention of the State's better sort of people, representative of industrial lines in all sections of the State, is to provide for the protection of the cultivated lands from such droughts as California has experienced within recent years and the extension of the State's arable area by the reclamation of what are now arid lands from need of water.

Chairman Dohrmann is also president of the Merchants'

Association of San Francisco, a comparatively new organization, although now numbering in its membership upward of eleven hundred mercantile firms, embracing the following list, copied from the Association's roster, in which they are classified under the head "Hardware":

Baker & Hamilton; Bennett Bros.; Chas. Brown & Son; S. J. Dean; Dunham, Carrigan & Hayden Co.; Christian Froelich; George W. Gibbs Co.; Holbrook, Merrill & Stetson; J. G. IIs & Co.; L. H. Kohn; Mangrum & Otter; C. F. Marwedel; Miller, Sloss & Scott; W. W. Montague & Co.; J. De La Montanya; Myers Stove Co.; Osborn Hardware & Tool Co.; Palace Hardware Co.; Chas. L. Pierce; H. Rosekrans & Co.; Taylor, Adams & Pritchard, and F. W. Wright & Co.

On the eve of the Convention of the California State Association for the Storage of Flood Waters, Mr. Dohrmann, through the medium of the *Review*, published by the Merchants' Association, spoke as follows:

"Our merchants should fully realize the value of the successful issue of the gigantic work contemplated by the Association for the Storage of Flood Waters. It will give impetus to all the industries of California that will prove constant and lasting. Not only will agriculture and mining flourish through this beneficent agency, but there will be developed a mighty power that will make California one of the foremost manufacturing centres of the Union. The high cost of coal has always retarded manufacturing in this State. Through this new agency, now going to waste, will be generated a force that will give to the future mills, factories and foundries of California what the cheap coal of the Eastern States has given to the thriving industries of New York, Pennsylvania and Connecticut. Therefore it behooves every merchant and manufacturer to participate in the work of the California State Association for the Storage of Flood Waters, and co-operate in every way possible to bring about the successful consummation of its labors."

Of course in the third matter of interest to the local trade, above mentioned, there is in San Francisco, and quite naturally, both a pro and con interest in the outcome of the St. Louis meeting of the Inter-State Commerce Commission. The line of division between those pros and undemonstrative cons is the dividing line between jobbers and retailers.

TRADES PRESS ASSOCIATION.

New England Hardware Dealers' Association.

The regular business meeting and dinner for November of the New England Hardware Dealers' Association was held in the United States Hotel, Boston, on Wednesday, November 8, with about fifty in attendance.

The amendment to the by-laws proposed at the previous meeting providing for the admission to membership of delegates from other New England associations was adopted, and the application of H. E. Russell as a delegate from the Hardware Social Club of Springfield, Mass., and vicinity, was acted upon favorably.

The after-dinner addresses included several of considerable interest. Edward H. Rice, of the Walworth Mfg. Co. of Boston, spoke on the subject of "Forty-five Years' Experience with the Walworth Mfg. Co.," in the course of which he referred to two important instances where in-

ventors had derived handsome profits from their inventive
ability, referring particularly to the well-known Stillson
wrench and the Stanwood cutter wheel, both of which are
handled by the company he represents.

W. E. Blake, of the Thayer Heater Co., Boston, deliv-
ered an address on the subject of "Fourteen Years in Hot
Water Heating Practice," and L. R. Putney, also of Boston,
on "Introducing American Ideas in London," giving inter-
esting and instructive details concerning the introduction
of the American parcel delivery system in connection with
the large department stores located in the British metro-
polis.

The enjoyable music of the evening was furnished as
heretofore by Robert L. Van Buskirk and Leslie F. Mans-
field.

Smoking goes on in the Philippines everywhere, but in
church. Even your cab driver will offer you a cigar if you
are not smoking and he thinks you have none.—*Exchange.*

An Eastern firm lost several pieces of mail through the
negligence—by courtesy—of a Western post office. It was
traced, but the trace ended in "somebody's" inside pocket.
Probably the firm was a "political suspect?" Recently
the same firm forwarded another letter, and a policeman
followed it on the coach behind the mail car. The letter
arrived simultaneously with the guardian, but the guardian
stopped on the way to the post office for luncheon. When
he later looked for his "charge" it had disappeared. The
trace ended the same way.

The greatest ship-building plant is in Glasgow, Scotland.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Alamosa, Colo.—Tomlins & Sabine.

Charlotte, N. C.—A. C. Hutchison, and T. W. Dixon have formed a partnership and will soon embark in the Hardware business. They have rented the Sims building on West Trade Street, and will have it arranged for their convenience.

Cleburne, Tex.—The Cleburne Hardware Co. has been incorporated with a capital stock of \$25 000.

Denver, Colo.—Burton Stove & Range Co., general Hardware business. Capital, \$2500. Incorporators: J. M. Burton, E. C. Burton, E. H. Park, all of Denver.

Hastings, Minn.—F. W. Kramer has opened a new Hardware store in Second Street, near Sibley.

Louisville, Ky.—John Adams, No. 220 West Market Street.

Tifton, Ga.—M. S. Harrison & Co. are putting in place a large stock of Hardware in a new brick store built for them.

Yellow Springs, Ohio.—John Funderburg and Mark Oster have opened a new Hardware store in Dayton Street, at Green's old stand.

Changes and Improvements.

Chattanooga, Tenn.—The Tom Fritts Hardware Co. have purchased the remaining stock of the Chattanooga Hardware Co.

Chicago, Ill.—B. A. Fessenden has sold to Hibbard, Spencer, Bartlett & Co. the dock and railroad lot on North Water Street, east of Rush Street bridge, for \$50,000 cash. The purchasers expect to build a warehouse on the land for their Hardware trade. The lot has a river frontage of 127 feet and a frontage of 120 feet on North Water Street, with an average depth of 412 feet.

Coldwater, Mich.—D. E. Williams, agricultural business purchased by T. Velie and A. A. Broan of East Gilead.

Copenhagen, N. Y.—V. H. Cook has finished moving his stock of Hardware and is now located at No. 36 Public Square, Watertown.

Fort Madison, Ia.—Chas. Ritchie has traded his Hardware stock to C. L. Waldo for Des Moines property. The stock is being invoiced and when completed the establishment will again be opened to the public.

Geneva, N. Y.—The Hardware firm of Dorchester & Rose, which recently purchased the Franklin House on Exchange Street, have decided to tear down that historic old structure and erect in its place on the same site a new modern five-story block, part of which they will occupy for their store.

Holly, Mich.—Durdle & Durdle, Hardware, succeeded by H. W. Holmes & Co.

La Grange, Tex.—M. J. Connell has bought a half interest in the stock of Hardware owned by J. W. Holloway, doing business on Colorado Street.

Lampasas, Tex.—Paul B. Taylor has sold

out his Hardware establishment, which has been purchased by Fox & Mills, another Hardware firm of this city.

Lincoln, Neb.—H. L. Groves and J. G. Cook have sold their Hardware store.

Luverne, Minn.—C. H. Puckett has traded his Hardware stock in this place to Thos. Arneson, a Hardware merchant of Valley Springs.

Manistee, Mich.—J. L. Sweetnam, Hardware, stock purchased by Barry & Wolters.

Mattoon, Ill.—The Hardware firm of Harmany & Swan has been dissolved, Mr. Harmany retiring from the firm on account of ill health.

Owosso, Mich.—Jackson & Son, of this city, have sold out their large Hardware business to A. M. Morris, of Grand Rapids. Mr. Morris will take possession in a few days.

Paterson, N. J.—A large four-story and basement building adjoining the Call office, has been rented to the Hardware firm of Quackenbush & Son. The building will be altered to suit their business in an up-to-date manner.

Salt Lake City, Utah.—A deal has been concluded by which the Salt Lake Hardware Co. has purchased for a consideration of \$5000, 5x10 rods on Third West Street between Second and Third South Streets. The Hardware company intend building a large warehouse on the property. The building will be modern in every respect, four stories high and will cover about half of the lot.

Sault Ste. Marie, Mich.—Wood & Thoenen, Hardware dealers, will build an addition to their present building on Ridge Street.

Sedalia, Mo.—The announcement is made that D. H. Smith, head of the D. H. Smith Hardware Co., on East Main Street, will go out of business as soon as his present stock can be disposed of.

Spring Valley, Ill.—Henry Duggan & Co. have sold out their stock of Hardware, etc.

Tamaqua, Pa.—Griffiths & Pedlow have dissolved, Mr. Pedlow retiring.

Three Rivers, Mich.—John Griffiths is building a warehouse 20x60 feet near the Lake Shore tracks, to be used in storing heavy Hardware.

Twin Bridges, Mont.—Buzzard & Zeyler dissolved partnership.

Walla Walla, Wash.—Newton & Cramp-ton succeed Newton & Sullivan.

Wadena, Minn.—A. M. Baumbach, Hardware and implement dealer, has sold out to Brockhoff & Holzer.

Warsaw, N. Y.—The Ballantine Hardware Co. have commenced the remodeling of their store.

Waterloo, N. Y.—James Nailor has purchased the interest of Mrs. Alice Fox in the Fox Block and will soon remove his Hardware business to the vacant store.

Watertown, S. D.—The Pioneer Hardware Co. succeed Paulson & Co.

Windber, Pa.—J. E. Kirk has sold his Hardware stock, lot, and building to Albert

Bantley, of Scalp Level, who has already assumed charge of the business.

Winston, N. C.—W. H. Gilbert, who has conducted a large Hardware store here for two years has sold out to Wall & Huske.

York, Pa.—Hantz's Hardware store, corner of Market and Water Streets has been purchased by C. S. Stitzel, who has been a clerk in the store for the past six years.

Business Embarrassments

Cumberland, Md.—Daniel W. Bussard, Hardware merchant, has made an assignment to Finley C. Hendrickson and Lorenzo D. Rohrer, trustees.

Deadwood, S. D.—The C. A. Griffith Hardware Co. have made an assignment. The business was started two years ago.

Hastings, Nebr.—Frederick G. Russell, Hardware merchant, has been declared a bankrupt by Judge Munger in the Federal Court. This action was voluntary on the part of Mr. Russell. He schedules his assets at \$2300 and his liabilities at \$10,000.

Salem, Ore.—D. W. Mathews has been appointed receiver of the Hardware firm of Brown & Smith.

Fires in Hardware Stores.

DeSoto, Ia.—J. W. Blackman's stock has been destroyed by fire.

Gaylord, Mich.—A. B. C. Comstock, Hardware, store damaged by fire.

Greenville, Pa.—J. H. Muntz & Co.'s large warehouse, stored with blankets, robes and Hardware, has been burned to the ground. The loss will aggregate several thousand dollars; partially insured.

Hartford City, Ind.—Lieber & Campbell's Hardware store has been destroyed by fire.

Indianola, Nebr.—Welborn's Hardware store has been entirely destroyed by fire. Loss, \$7000; insurance, \$4400.

North Vernon, Ind.—Tripp Bros., \$300.

Omaha, Nebr.—Royal D. Amy, \$200.

Pittsburgh, Pa.—A. C. Buch, revolvers and knives.

Sturgis, S. Dak.—H. O. Anderson & Son, ammunition.

Trumansburg, N. Y.—C. W. Dean, \$400.

B—represents the central vertical line. **C C**—represent the vertical planes of the shovels.
D D—show the handles, situated through their entire length, between the central vertical line and the vertical planes of the shovels.
E—shows the stops above the pivot to keep the handles apart. **F**—shows the pivot.
 All Diggers having these features, as embodied in our claim, are manifest infringements.

F. E. KOHLER & CO., CANTON, OHIO.

TO THE HARDWARE TRADE.

BEWARE OF IMITATIONS OF OUR POST-HOLE DIGGERS.

WE CLAIM, all Diggers having handles not meeting, but held apart by any sort of Device, so that when the shovels stand parallel, the handles stand apart throughout their entire length between the vertical planes of the shovels and the central vertical line, ARE INFRINGEMENTS on our Patents, and we caution all parties against making, selling or buying Diggers covered by this patent. INFRINGERS WILL BE PROSECUTED!

OUR CLAIM READS AS FOLLOWS.

WHAT I CLAIM IS:

"In a post-hole digger, the combination of the opposing shovels, the metallic connecting arms AA', curved inwardly and provided with the stops a' at the upper ends, the pivot which directly joins said metallic arms below said stops and the straight wooden handles secured to the outside of the metallic connecting pieces above the pivot, said parts being arranged substantially as set forth, to have the handles swing toward and from each other in the same plane and to be held apart by the metallic connecting pieces and the stops above the pivots, they being, when the shovels are in parallelism, situated on straight lines throughout their entire length between the vertical planes of the shovels and the central vertical line, substantially as set forth.

(Signed) F. E. KOHLER."

Our Diggers are not equaled by anything on the market. Do not be deceived by the imitations claimed to be "Just as good as the Hercules." We have cheaper Diggers that are far better than the imitations. "The Best is the Cheapest" in the long run.

Changes and Improvements.

Bristol, Conn.—The American Auger Bit Co., lately of New York City, have leased for a term of years, the brick building in East Bristol, formerly occupied by George H. Turner. A number of families will be brought to the town by the business.

Brockton, Mass.—Work will soon commence on an addition of 150 feet to the D. B. Gurney & Son tack factory on Washington Street, for the accommodation of the new business that is to be removed here from Ansonia, Conn.

Chicago, Ill.—The Trinidad Agricultural Co.; capital stock increased from \$36,000 to \$50,000.

Chicago, Ill.—A reorganization and strengthening of the Chicago Hardware Co., which has a factory at North Chicago, has just been effected. A controlling interest has been purchased by a syndicate, comprising C. H. McCormick, H. F. McCormick, Stanley McCormick, J. H. Shields, N. S. Patton, R. W. Patton, and H. B. Patton of Chicago. James H. Shields will become president and manager.

Chicago, Ill.—The Deering Harvester Co. are increasing the height of their foundry at Clybourn and Fullerton Avenues sixteen feet. The foundations of the building cover 260x98 feet.

Claremont, N. H.—The Sullivan Machinery Co. are adding another story to the main building of their plant.

North Adams, Mass.—The James Hunter Machine Co. have begun work on an addition to their plant. The building will be brick, 15x50 feet, and two stories high, and will be used as a machine shop.

Oakland, Me.—The American Axe & Scythe Co. are doubling the capacity of their factory, preparatory to introducing new machinery.

Omaha, Neb.—Kingman Implement Co.

have bought the southeast corner of Tenth and Farnam Streets, and will erect thereon a modernly-constructed and equipped, seven-story, 132x132 feet, agricultural implement warehouse.

Quincy, Ill.—The Quincy Hardware & Mfg. Co., whose plant is located at the northwest corner of Fourth and Oak Streets, will close down by January 1st, and the machinery will be removed to Chicago.

Shawmut, Me.—Lawrence, Newhall & Co. have a crew taking down the Burrill Mill at Coopers Mill and removing it to Patten, for the manufacture of shovel handles. There are three buildings: 25x60 feet; the boiler house, 25x40 feet, and the store house, 20x40 feet.

Taunton, Mass.—The Atlas Tack Co. have just purchased the business of Brown & Co., of New Bedford (papier mache nail manufacturers) and will at once remove the entire business to No. 2 mill in this city and carry it on in conjunction with their regular line of work.

Warren, Ohio.—The Warren Range Co. will build an addition 40x120 feet to their plant.

Whitman, Mass.—The industry of Whitman is to be increased at an early date by the removal here of the McKay Metallic Fastening Co., which for two years past has been located at Ansonia, Conn.

Recent Embarrassments.

Indianapolis, Ind.—The American Mfg. Co., manufacturers of specialties and novelties, brass and wood patterns and models, John G. Dunn, appointed receiver.

Recent Fires.

Allegheny, Pa.—The Anshutz-Bradberry stove foundry, Preble Avenue, has been damaged by fire to the extent of \$100. Sparks from a cupola fell on the awning in front of the office and caused the front of the building to catch fire.

Birmingham, Ala.—Plant of the Birmingham Hardware Co., at East Birmingham, burned. Loss, \$30,000; insurance, \$45,000.

Chicago, Ill.—Frank W. Swett's saw factory, No. 35 West Washington Street, destroyed by fire.

Philadelphia, Pa.—The D. M. Osborne Farm Implement Co.'s plant, No. 246 North Broad Street, and the W. S. Cooper Brass Works adjoining, have been burned, causing a loss of \$140,000, partly covered by insurance. The Osborne Co.'s loss was \$100,000. The origin of the fire is unknown.

Miscellaneous.

Newburgh, N. Y.—At the annual meeting of the Coldwell Lawn Mower Co., held recently, the following directors were elected: Thomas Coldwell, E. W. Mapes, H. W. Marshall, E. C. Ross, B. B. Odell, Jr., Howard Sweetser, George A. Sanford. The directors subsequently elected the following officers: President, Thomas Coldwell; vice-president, H. W. Marshall; treasurer, E. C. Ross; secretary, W. H. Coldwell.

Benefits Greater Than Ever Before.

Nicholson File Co., Providence, R. I., [Files]: We are pleased to state that the results thus far obtained from our advertisement in the columns of *Hardware* fully justify our having resumed our contract with you. We feel that the benefits which we are securing from your paper are greater than ever before.

This is the "Proper Clothes Line Reel,"

with which a line can be stretched by simply using the crank after hitching the line to the desired point. It saves the line and keeps it free from dirt. When line is reeled in, close the door and it will revolve to the lower side, making a Perfect Protection from the weather. The drum is made of galvanized iron, and all thoroughly and artistically japanned. With proper care will last a lifetime. Price, \$1.25. Liberal discount to dealers and agents.

CARY'S PATENT HINGE AND HASP

Designed Especially for
Fruit Crates, Milk,
Egg, Cracker and
other styles of
Boxes, requiring a
hinged cover.

CARY MFG. CO.,
19-21 Roosevelt St.,
NEW YORK.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

SAMPLES BY MAIL.

SQUARE STYLE.

NEW ERA RADIATORS

Used on **STOVE** or **FURNACE PIPES** save the **HEAT** that usually goes up the chimney. They are simple in construction, handsome in appearance and powerful heaters. One or more of these great fuel savers should be in every house.

NOW IS THE TIME TO PUSH THEM. . . . WRITE FOR PRICES.

J. L. PRESCOTT & CO.
NEW YORK, N.Y., U.S.A.

Can You Afford-

to carry in stock unknown brands of stove polish that your customers know nothing about, brands that do not call for the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish. Paste, Cake or Liquid. If you are doing business for a profit it will pay you to handle our whole line.

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

To the Trade.

We began to sell our new, patent "Four Hundred" line of table cutlery nearly one year ago. As soon as these goods were shown, their beautiful appearance and the substantial manner of their manufacture attracted the attention of some of the large trade, and from that day to this we have been unable to fill our orders promptly. We now understand something of the magnitude of this special line, and have prepared for an enormous sale, and respectfully invite the commands of the trade. Nothing so beautiful, so substantial and practical has ever before been offered to the public.

McKINNEY MFG. CO., - Allegheny, Pa.**JOHN H. GRAHAM & CO., Selling Agents, (P. O. Box 1042), 113 Chambers St., NEW YORK.****GREAT SANITARY STOVES. ALUMINUM OIL HEATERS.***Read what WILLARD H. MORSE, M.D., F. B. S. Sc., has to say about them:*

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates—durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

HARDWARE

The salesman who betrays a greater anxiety to know "when the next train goes" than he does to show his samples, either gets too limited a salary, or is traveling on a reputation of the "has been" order of excellence.

A man with two demijohns—which he placed under the seat—occupied a place in the Erie ferryboat recently, and inadvertently sat under the sign, "Life Preservers will be found under the Seat." He wondered why passengers looked first at his head, then at his feet and smiled.

The wise salesman never sells goods "at cost" within the knowledge of the buyer. It occasions the investigating mind to wonder why? Then again, it is human nature to believe the seller will average a good profit on the order, by putting something else on a less conscientious basis of price.

A man during the rush hours on "the Elevated" if he follows one of the fair sex toward the cars can never fail to catch the train.

On page 45 will be found an advertisement calling attention to a sale of a complete set of Register Patterns. This is an opportunity rarely occurring, and should prove of interest at the present time.

If the thieves who recently held up "Dime Museum" Huber only knew it, the victim would pay more to put them on his boards as an advertised attraction than they could obtain if they held him up daily for a month.

The best passport to the confidence of an intending purchaser, is the impossibility of remembering any other house with which the salesman has been identified, long service being the foundation-stone of commercial probity.

L. O. Crocker, of Braintree, Mass., the maker of the famous Crocker conductor punch, has just finished a shipment of his punches to South Africa. These go to equip the Robertson D. Limited Mine.

Hardware quite recently received a very enjoyable visit from A. Asher Smith, who is at present visiting America, from Sydney, Australia, where he has been actively in touch with the Hardware trade for ten years. He represented the Sydney Chamber of Commerce at the Commercial Congress in Philadelphia, and is sanguine in his views as to the continued expansion of American trade with his country. He regards the development of our merchant marine and the construction of the Nicaragua Canal as important factors in this direction. At present Mr. Smith is visiting the manufacturing centers making arrangements with a number of important manufacturers for thorough and practical representation of their goods throughout Australasia. He visited the Convention of the National Hardware Association last month at Pittsburgh, and was very cordially received by that body, a courtesy regarding which he expresses the highest sense of appreciation. His New York office is: Care The Deming Co., No. 58 Pine Street.

Miller, Sloss & Scott, San Francisco, announce that they have purchased the entire stock and good-will of E. T.

Allen Co., No. 416 Market Street, in that city, and will immediately add this large wholesale stock to their own. The retail branch of the business, formerly done by that house, they have disposed of to the H. E. Skinner Co., who will continue a strictly retail business in the old quarters. Miller, Sloss & Scott will derive increased advantage by this their latest acquisition, adding largely to their sporting goods department. It is their intention henceforth to carry a complete line of athletic goods which will include gymnasium football and golf supplies.

The Audit Co., No. 120 Broadway, New York, have just published a Directory of Directors in New York. The issue of this directory was commenced by them last year, and proved a success, being the only publication of the kind within reach. It gives in alphabetical form the names and addresses of individuals in the city of New York who are connected as directors with public companies, and enumerates the companies with which each is identified. In an appendix there is given a list of the banks, the insurance and safe deposit companies; also of manufacturing and miscellaneous companies, and transportation, telegraph, telephone and express companies, and trust companies, with the names of their officers and boards of directors.

The friends and customers who have visited the works of the Joseph Dixon Crucible Co. in Jersey City, have not failed to note the evidences of continued growth. Their factories cover 63 city lots. The old structures erected over fifty years ago are marked and seamed by time, but they are still "in the ring." The age of the extra stories and additions can almost be told by the experienced eye. They show up around the works like grafts on an old tree.

During the past decade not a year has gone by without some addition to some part of the plant. They intend beginning at once the erection of a new addition to the pencil factory, 135x40 feet, four stories high. They are also considering the installation of a steam and electric plant to cost twenty-five to thirty thousand dollars.

A publication in *Ironmongery* of recent date says that South Africa imported during 1897 no less than 7000 tons of wire fencing, chiefly from the United States, the iron posts, for which, however, were mostly furnished by other countries.

Robert M. Eadon, a Sheffield manufacturer, is also quoted by the British and South African *Export Gazette* as saying: "American manufacturers are rapidly gaining in favor. Several lines were mentioned in which the superior finish of American or German goods has caused their more extended adoption at our expense." American engines, Mr. Eadon found, were much in evidence in South Africa, especially in the interior. Their lighter weight and the consequent smaller transport charges, where they have to be conveyed inland, frequently without the aid of railways or steamers, has, he said, no small part in effecting their readier acceptance. American mining machinery, saws and axes were met in much greater quantity than the same class of goods from British workshops, but, apart from these goods, they had not lost to any noticeable extent.

HARDWARE

VOL. XX.

DECEMBER 10, 1899.

NO. 5.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	President.
E. N. ROOT,	Treasurer.
W. C. BRUNDAGE,	Business Manager.
HENRY HOPKINS,	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The colder weather, which with snow in some sections has been the prevailing feature of the past week, was gladly welcomed by the jobbers and retailers of our industry. Owing to the absence of snow and ice within the territory covered by our correspondents, the sale of seasonable goods such as sleds, skates, sleigh bells, snow shovels, etc., has been decidedly sluggish, and colder and more seasonable weather, with Santa Claus accompaniments, especially for the Christmas trade, is a consummation of atmospherical phenomena devoutly to be wished. The warm weather prevailing through the past month has made sales of seasonable goods very much lighter than they should have been. Customers among consumers, and even retailers in waiting, following old habits. The volume of trade based on values shows up very favorably, however, by comparison, and prices are gradually becoming marked up to market standards, the retailers being the last to take advantage of the improved conditions.

Collections are reported as being above the average; agricultural products that have been held to obtain top-notch quotations, have been gradually marketed; debts have been paid with the proceeds, enabling the retailer to cancel his outstanding indebtedness, and so on all along the line, until it reaches the manufacturer, who gets it in the lessened time for which he is willing to pay "2 off, 10 days."

Money, except in stock-jobbing centres, is in very gratifying supply, and with favorable rates of interest even on commercial paper. The cash discounts called for by the jobbers in National assembly, will be claimed and adjusted more numerous than ever before from the fact that it is admitted by all hands to be a permanent profit, and no longer considered as a part of the net cost. The income derived from this source by the few houses in the country doing business that is counted away up in the millions, must be of such a satisfactory character that if it is acted upon in a truly conservative spirit, will prove a source of revenue worthy of a bigger convention than even the magnificent one, the expression of whose unanimous wish brought it about.

Selling Goods Ahead.

The custom of selling goods in advance of the season is becoming more prevalent than ever. Each year the retail dealer is solicited to anticipate his customary wants to a still greater extent. The time will soon arrive if it has not been already reached, when one

season's business will have hardly closed before the dealer is importuned by some ambitious, if not enterprising, salesman to place his order with him for the needs of a year hence, for fear a competitor will solicit and secure the specifications before his next call.

Among other objections to giving salesmen prices on seasonable goods as early as they now receive them, is the tendency on the part of these hustlers to devote to the sale of goods which show but a slight margin of profit, time which could be more advantageously employed in urging the sale of novelties and regular goods, for which there will be no demand two months later, when the proper time has been reached to solicit orders for the class of goods under discussion.

So long as jobbers continue to compensate their salesmen on the basis of the volume of their business, they must expect their sales to be made up very largely of staple and seasonable goods. While there are exceptions to the rule, it is an established fact among salesmen that the longer the period which must elapse before the purchaser will be able to realize upon his purchase, the greater the amount of time and nerve force necessarily consumed in securing the order.

While it is true at all times to a great extent that a dealer in anticipating his wants so far in advance is liable to over buy, it is more particularly the case upon an advancing market, the temptation to speculate being then very strong. There are many in the trade who believe this matter of selling goods ahead has passed beyond the limit of reasonable effort. The majority of seasonable goods are now controlled by trusts, pools and combinations, as they have been severally designated, and it is within their province to remedy this matter.

One or two companies, composed of a number of manufacturers are still withholding from the trade their prices on certain staple goods for Spring consumption. If the dealer is not informed of the prices which will rule during the Spring season until after January 1st, the volume of sales will be just as great as if prices had been announced in September. It is true that if the price is not named until the beginning of the year, that some jobbers may not have the opportunity to secure extra discount for payment ahead of the season, but the manufacturer who is situated so he can carry the stock himself, will save money because he is always compelled to give a greater discount for prepayment than the interest rate on the amount involved.

This subject should receive the thoughtful consideration of both the manufacturer and the jobber, during this period when so many matters of importance to all connected with the Hardware trade are being so thoroughly discussed.

A Noteworthy Holiday Season.

The demand for holiday goods is making itself felt very largely and for the first time in several years the revenue from this source will provide the stuffing for the dealer's holiday turkey, and prove the appetizing sauce for his Christmas pudding. Making up for lean years in the past, the working people may be relied upon to spend a portion—and a goodly portion at that—of this month's earnings in and among the stores distributing articles of housekeeping utility, wearing apparel conducive to comfort, toys and other goods for the children, and useful articles in general for man and wife.

All this is done with a freedom in the outlay justified by the knowledge that the year so near at hand will close no factory gates to the willing worker, nor quench the fires of any busily glowing forge, with a rainbow of promised work brightening the former lurid outlook. Work can now be had by the willing artisan, and honest rewards are obtainable for the output of the industrious artificer and the handiwork of the skilled mechanic. The rate of pay for the toilsome hours of the ditch digger and the mining delver are no longer based on the miserable needs of the unemployed nor tinged with the blood-stains of unrequited toil, and the debt-burdened backs of the unfortunate.

The year 1900 will fitly close a century of successful accomplishment, which found the nation an infant in swaddling clothes, with an undeveloped strength crowning the hopes of its glorious promise, in the year that ushered in the one hundred now rounding up. The same nation to-day is flaunting the majestic plumes of an undying pride in progressive achievement on every field of industry and valor; asking no odds from the industrial excellence of other lands born of centuries of intelligent success, nor fearing the defiance given by standing armies represented by banded millions robbed from the cultivation of the soil to uphold the blood-stained banners of decaying dynasties.

Exports of Manufactures Hold Their Own.

American manufacturers are selling to the outside world over a hundred million dollars' worth of iron and steel in the calendar year 1899, or twenty million dollars in excess of any earlier year in their history. The October statement of exports of manufactures of iron and steel, just completed by the Treasury Bureau of Statistics, shows for the month of October an increase of over two million dollars, as compared with October of last year, and for the ten months an increase of almost twenty million dollars as compared with the corresponding months of last year. The October figures of exports of iron and steel and manufactures thereof are \$9,593,453, against \$7,299,185 in October of last year, and for the last ten months ending with October, \$86,162,253, against \$67,290,560 in the corresponding months of last year. Both in price and quantity the figures of the export trade show an increase, and in practically every article and class of articles. Bar iron, for instance, shows an increase of nearly 100 per cent. in quantity exported in 1899 as compared with 1898; bars or rods of steel, an increase of 30 per cent.; wire rods of steel show an increase of 25 per cent.; steel sheets and plates, an increase of over 100 per cent. and wire nails an increase in round terms of 200 per cent. in quantity.

It is thus apparent that the frequently expressed belief that the increase in prices of iron and steel and manufactures thereof in the United States would cause an immediate and plainly perceptible decrease in our exportations was not justified. The corresponding rise in prices in other parts of the world and the continued increase in demand for products and manufactures of this character fully offset the increased prices and increased demand at home; and this combination of unusual demand from the home and foreign markets upon our manufacturers readily accounts for the frequent reports of shortage of supplies of material and inability of American manufacturers to promptly fill all orders received.

The following shows the exportation of the principal articles of iron and steel in which it is practicable to indicate the exportation in terms of weight, by the use of which the increase or decrease is more accurately shown than where only the statement of values can be presented:

Articles.	Ten months ending Oct. 31—	
	1898.	1899.
Wire (pounds)	134,842,261	219,085,969
Steel sheets and plates (pounds)	48,450,492	109,304,669
Steel bars or rods (pounds)	42,455,555	58,063,146
Wire nails (pounds)	24,400,842	56,583,657
Bar iron (pounds)	12,278,374	21,847,035
Cut nails (pounds)	27,334,714	18,283,889
Iron sheets and plates (pounds)	7,038,656	12,050,354
Pig iron (tons)	184,320	207,728
Structural iron (tons)	29,246	37,476

The following table shows the value of the principal articles for iron and steel manufactures thereof exported during the ten months ending October 31, 1899, compared with the corresponding months of 1898:

	Ten months ending Oct. 31—	
	1898.	1899.
	Dollars.	Dollars.

Trade Directory in Spanish.

Under the title of *Indice del Comercio Americano*, the National Association of Manufacturers has published a Spanish edition of the book which appeared under the name of *American Trade Index* in January last. The present issue is a book of 425 pages and follows exactly the plan and arrangement of the English volume. This book is a classified and descriptive directory of the membership of the National Association of Manufacturers, the purpose being to place in the hands of the foreign merchants a convenient handbook which shall enable them to select reputable manufacturers in the United States in any lines in which they may be interested.

The first section of the book contains an alphabetical list of members of the association and a list of articles manufactured by each firm. The second section of the volume contains the same names classified under various headings, so that a buyer who wishes to purchase steam engines, or castings, or agricultural implements, or machine tools or any other of about 1800 articles can see at a glance the name of reputable manufacturers who produce the desired articles. The third section of the book contains in alphabetical order the registered cable addresses of the members of the Association. The book is interleaved throughout with detachable blanks, which can be used for inquiries for any articles which are not mentioned in its pages.

Five thousand copies of the Spanish edition have been printed for circulation among the best merchants in the Spanish-speaking countries of the world, including Spain, South America, Central America, Mexico, the West Indies and the Philippines. Its distribution will be entirely gratuitous, but as it is intended solely for the use of the foreign buyer, no copies will be distributed in the United States.

The publication of the various editions of *American Trade Index*, together with other periodicals, pamphlets and bulletins issued at frequent intervals, has assumed such importance that the Association is preparing to install its own plant for the conduct of its publication work.

The authorities in Algeria gave \$40,000 toward fighting the grasshoppers. In one section 3200 camels were employed to carry the material for burning over the places where eggs had been deposited.—*Exchange*.

Women employed on Japanese tea farms work twelve hours and are paid fifteen cents a day.—*Exchange*.

The "Man in the Corner" Heard From.

"A good name is rather to be chosen than great riches," says Solomon, and no better proof of the fact that human nature remains unchanged through the ages can be found than in the way in which this and other of the precepts of the ancients fit in the life of the present day. Who is there who does not realize the force of the old adage quoted, and where is the man who will not guard as his most valuable asset his commercial reputation? The houses that are held in highest esteem are those whose yea is yea and whose nay is nay, and who hold as a thing sacred the honor of their dealings, rendering to the utmost farthing, even when they are as scrupulous in their exactions. It is the prevalence of honor in trade, and the recognition of the worth of a good name that enables us to substitute individual checks and bank drafts for Uncle Sam's currency and that forms the basis of the credit system; and it is this that has injected into commerce that most potent influence called confidence. A good name is like credit—of value until it is overworked. When a business man uses his fair fame as a spur to the attainment of a still higher commercial standard it is a blessing to those with whom he has to do. When he prostitutes it to the getting of undue profit, whether by relying upon his reputation to float inferior wares, or by charging more for his goods than they are intrinsically worth, because they bear his trade-mark, he sooner or later sinks in commercial importance and esteem.

J. B. COMSTOCK.

The First American Patent.

To the General Court of Massachusetts belongs the honor of granting the first American patent; this was in 1648 and was then designated as a monopoly. It was confined to the region controlled by Massachusetts, and the one issue apparently included all the inventions of the inventor connected with engines that depended upon water for their motive power. The limit of the monopoly was fourteen years, and the court not only retained power to forbid exportation, but to prevent exorbitant charges upon the public for their use. The patent was issued in this form:

"At a generall Courte at Boston the 6th of the 3th Mo 1648. The cor't consid'inge ye necessity of raising such manufactures of engins of mills to go by water for speedy dispatch of much worke with few hands, and being sufficiently informed of ye ability of ye petition to performe such workes grant his petition (yet no Othr persen shall set up or use any such new invention, or trade for fourteen yeares without ye licence of him the said Joseph Jenkes) so farr as concernes any such new invention, & so it shall be alwayes in ye powr of this co'te to restrain ye exportation of such manufactures & ye prizes of them to moderation if occasion so require."

This inventor, Joseph Jenkes, or Jenks, as it would now be spelled, came from Hammersmith, England, settled in Lynn in 1643, and died in 1682-83, aged 81. He was a blacksmith and machinist, made the dies for the coining of the "Pine-Tree" money, and built the first fire engine in this country; altogether a man of great inventive genius, and the ancestor of a large number of descendants. One of his sons removed to Rhode Island, where he built several mills.—*Boston Transcript*.

Plumbing Proverbs.

The plumber is the recognized Ishmael of the industrial world. While his hand is not against every man, every man's hand is certainly against him. His days are filled with toil and abuse and his nights with visions of disputed bills.

The accounts he carries on his books constitute what might be termed an inverted faith, being the evidence of things hoped for and the substance of things not seen.

He invariably resolves to "do or die" when starting out on collecting expeditions, and as invariably returns saddened by the thought that he has done neither.

He has heard on excellent authority that "in all labor there is profit," but has reason to believe that all labor in his line was not meant to be included.

When business is dull he has nothing to do, and when good his supplies are so high that he cannot make a profit.

Acting as a target for the cruel shafts of a critical public causes him to mature young, and it seems to him that the notes he gives do too.

Even white haired saints grow red headed at the mention of his profession and overlook the fact that he is the man who fixed a gulf between them and the undertaker.

The songs he sings are dirges and the stories he tells are laments.

His only hope in this world is to leave it, and even then, if he goes where many an irate customer has consigned him, he will probably find that the last move of his life corresponds with the whole.—"*Solomon Junior*," in *The Metal Worker*.

Our Rapidly Growing Money Circulation.

One more financial month like November will bring the total of money in circulation in the United States past the two billion dollar line. On November 1st the total money in circulation was \$1,963,716,148, and on December 1st, \$1,985,930,964, an increase of \$22,214,816 in the month. A gain of even two-thirds this amount in the present month would bring the total money in circulation in the United States past the two billion dollar line for the first time in our history.

The steady and rapid growth in the circulation of money in the United States, both gold and total of all kinds of money, is indicated by data supplied in the annual and monthly statements of the Bureau of Loans and Currency of the Treasury Department showing the amount of gold and total money in circulation in the United States at annual periods during the past twenty years. It shows an increase in that length of time from \$138,641,410 of gold and gold certificates to \$778,385,303, and of total circulation from \$816,266,721 to \$1,985,930,964, with the prospect, as already indicated, that the two billion dollar line will shortly be crossed. While the general growth in that time has been remarkable, that of the past three years is especially marked. On July 1, 1896, the total money in circulation in the United States was \$1,509,725,200, and on December 1, 1899, \$1,985,930,964, an increase during three and a half years of \$476,205,764, or 31½ per cent.; while the gold coin and certificates increased from \$498,449,242 to \$778,388,303, an increase of \$279,939,061, or 56 per cent.

A Giant Manufactory.

In Elizabeth, N. J., the works of a sewing machine company continued in operation on Election Day. The excuse was "prosperity." There are so many orders ahead that the 4,000 employees must yield up a holiday now and then. The capital stock of this company is \$10,000,000. Its buildings contain eighteen acres of floor space, and its output is nearly 500,000 completed machines annually. This will be increased to 1,000,000. A poor mechanic started the first machine in Boston in 1851. There are in the United States 1000 branches of the business, besides two large wood-working factories. Another factory is in Canada, and a fourth is in Australia. In Glasgow are immense works employing 4500 mechanics. The entire list of employes, taking every department of the business, exceeds 40,000, far outnumbering those of any other single concern in the world.—*New York Press*.

The largest hospital in the world is in Paris, (the Hotel des Invalides.)—*Ex.*

HARDWARE TOPICS BY THE WAY.

Everything is safe until it proves unsafe.

"Mysterious" fires knows no fire-proofing.

The safety lift often ends in a crushed skull.

The stave famine can no longer be staved off.

Glitter never wears, not even on a pawnbroker's sign.

Many modern improvements are largely of the gaseous nature.

Combination knives ought to be technically known as toy knives.

The credit man is to business what chemistry is to manufacture.

Electricity is the natural creator of glass and its higher evolutions.

You may check gravitation but you must expect boomerang action.

Hammer away, seems to be the hourly slogan of the drop hammer and cannon.

We are not in need of less law, but fewer lawyers, better morals, and a more contented spirit.

When the non-trust manufacturer's mouth waters, the trust manufacturers water their stock.

Scarce timber means scarce lumber. What's good for the lumberman is bad for the consumer.

Corporations would not nearly be so corrupt if shorn of the influence of the corporation lawyer.

Even the game crop is abundant. The arms and ammunition men are smiling full moons these days.

The motto: "In God We Trust," on the American dollar, whether gold or silver, seems but brass arrogance.

To avoid damage suits, factory and mill owners ought to introduce an accident insurance system of their own.

A trust may then live after the vacuum represented by fictitious capital has been filled in with solid collateral.

Fools grope about in the dark looking for profitable soil investments. There is none more promising than forestry.

The ball-bearing system will eventually be adopted by the entire vehicle industry, after metallic construction has obtained.

The European forests, especially the large areas of serviceable timber of Germany, will prove an El Dorado to that country.

This is the era of the specialty salesman. Become a specialist and the world will again prove a succulent oyster for your sword to open.

If you would put your trust in Providence through the medium of filthy lucre, it proves but another form of worshipping the golden calf.

Independent industrial enterprises are multiplying at a fearful rate, and the trusts are already grinding their teeth—appetizing appreciation.

Not only the human is ground under the iron toe of the times, but nature itself. There is no escape from the onward march of civilized barbarity.

A consolidation of the cycle, automobile and rubber interests entire is on the tapis. Methinks the monopolies are beginning to overreach themselves.

An international financial crisis will prove the death knell to the overcapitalized trusts. And what are the majority of trusts but trust-to-luck make-shifts?

Trees are ground into pulp to come out as waste paper. When nature's spruce creations can lose their identity in the rag shop, nature itself may lose her identity.

We have not heard of barb-wire trochas in South Africa. Was ist los? But, I forget. The British are roughriding with mules, and mules are donquixotish of nature.

It looks as if the slate roof were slated for early abolition. The corrugated nature of the iron age knows no such competitor as slate. Even the paper pad is anti-slate.

The best is none too good, is a safe principle to adhere to, but not so in a bargain community. When the tendency prevails to buy cheap, the seller loses consideration for quality.

Trusts dealing in the direct products of the earth, such as oil, ores, woods, coal and other elementary utilities, are generally safe investments, ownership corruption or cataclysms excluded.

Well, ultimately you will blame the interurban railway and telephone system for the decapitation of the traveling salesman. The trusts are beginning to load responsibilities upon the shoulders of pseudo auxiliaries.

Fully two-thirds of the official corruption in American life is traceable to the iniquitous scheming of our law-makers and interpreters. Of false prophets, the legal fraternity takes the lead, and receives the most revenue.

It's now steam, electric and autolocomotion versus the bicycle. By carrying bicycles free, the railroads are naturally working against their own interests, and we cannot condemn them for tariffing bicycles as freight. If railroads would bear the onus, they might appear in the light of "crucifying" themselves.

The imperishable mortar of the Romans is a lost invention. Builders do not seem to want lasting quality nowadays. The new world is for the nonce. One builds to rebuild and for repairs. When new structures go to pieces during the course of erection, there is something radically wrong in plan and execution.

Knot holes are to the board what air holes are to the casting. You cannot convince a sane man that a knotty board is more desirable than one without knots, but while you may successfully cement a knotty board, you cannot successfully palm off a worm-eaten casting for the reason that the former is nature plus artifice, the latter all artifice.

It is about time our factory and mill owners would all look to the hygienic and sanitary welfare of the operatives as well as to luxurious office quarters. There is even palace accommodation for blooded animals of the so-called lower type, but it looks as if a large bulk of the human animal had sunk below the level of the money-earning race horse.

Even Hardware lines have their fashions. But they generally end in the beginning. A plain tool or instrument performing the same work as satisfactorily as a fancy one, is frequently the best and cheapest in the end. The art in tools is not always fit for wear and tear. When technical science degenerates into delicacy, science must begin anew.

Moaned a traveler: "I have held positions with various firms for the past fifteen years, earning upward of \$3000 per, and could keep a family on my expense account. Now the trust has discharged me, and I am on my uppers." Foolish confession! This man could be a trust director himself had he saved his money. There are hundreds like him. Well, every self-downed individual thinks the world owes him a living. The travelers merely paraphrase it to suit their case. But they'll find little commiseration in the world at large.

Oh, these trusted manufacturers! They even now refuse to ship goods for inspection and subject to "future" conditions or circumstances! They insist on acceptance of goods as per order, thus dispensing with back water policies and other "fun." There is now no pleasing a favorite traveler who sells the same line as the other fellow, not so favorite, but quicker! If you can't buy leave it alone. Don't buy in duplicate just to please a traveler and cut the other fellow's sale out by returning the goods on some fictitious pretext. This policy was bad for the traveler and bad for the manufacturer. It was simply toying with business. Well, Mr. Jobber, decide now for all time that you will be a good man. Don't monopolize all the rights, for you will only monopolize a few more manufacturers. Buy on principle, not on policy. Be a man of business rather than a juggler. Hardware tempers are not always for hardware. When you place a man on a defensive basis he will sooner or later take the offensive.

Cleveland, Ohio.

JOHN B. RINDFLEISCH.

Carving-Knives and their Treatment.

Carving-knives should, to begin with, be of the best steel, and then should always be kept in the highest condition. A good knife saves time and trouble, while the portions and joints look so much better than if an instrument with a blunt cutting edge has been used. It is well for an ironmonger when offering these goods for sale to thoroughly understand not only the construction of the article he sells, but the best manner of using it. A few hints given by a Sheffield manufacturer when discussing this subject, may be useful. He says: "I have handled carving knives both in business and at my table for many years, and I know that the best knives will not cut properly when used on hot roast beef unless the steel is used after every few cuts. The best way is to use the steel after every cut. The steel need not be rough, as some people imagine—in fact, a well worn steel is better than one with a rough surface, and a few passes over it with the knife produces a good edge. The man who rubs and manipulates a carving knife for five minutes against a steel before he begins to carve, and thinks that now he has it all right and may send the steel away, makes a great mistake. He should keep the steel handy, and pass the knife over it lightly a few times after every cut or two. And even then he will accomplish nothing unless he knows how to use the two instruments. A carver must be held at an angle of twenty to twenty-five degrees on the steel. One must be careful to have the angle the same on both sides, otherwise the knife will be dull instead of sharp. The knife should be drawn on the steel from heel to point against the edge, and the pressure should be very light."—*Ironmongers' Chronicle (England)*.

Some men are known by the company they don't keep.

The Most Ancient Machine Tool.

There can be very little doubt that the potter's wheel, or potter's lathe, as it is also termed, represents to-day the most ancient form of machine tool known. Among the many sculptured records of the trades and occupations which so vividly represent the customs and habits of the ancient Egyptians, the potter and his wheel have been found frequently depicted, and it is curious to note that through the almost countless generations since that time this crude type of lathe has undergone no material modification. The primitive form was evidently a small round table, set on a pivot, and free to revolve, being turned by hand at intervals; and to this device there were added in the course of time such simple conveniences as a table to support it and a foot or a hand power turning arrangement, displaced in recent years, in possibly a few isolated cases, by actual engine power driving. In general use, however, the potter's wheel of the present time bears all the characteristics of the one which, 4000 years or more ago, served to turn out pottery attesting unsurpassable taste and skill. It is curious, too, that in none of these ancient records are there shown examples of the forerunner of the common turning lathe as we know it to-day, even though the art of turning may be traced back to a very remote period. Among Egyptian antiquities that have been found at Thebes and other cities there have been many specimens which exhibited indubitable signs that the material, while in revolution, was subjected to the action of a tool held at rest—legs of stools and chairs, for example, and lamps and musical instruments—and in later centuries, among the Greeks and Romans, the lathe was undoubtedly in common use. Cicero and Pliny both refer to the art of turning, and Herodotus thus uses the lathe as a familiar simile. "But I smile when I see many persons describing the circumference of the earth, who have no sound reason to guide them; they describe the ocean flowing round the earth, which is made circular as if by a lathe." Unfortunately, however, it appears that none of these nor other early writers, have left any account of the lathes and tools employed by their contemporaries.—*Cassier's Magazine for November*.

A New and Attractive Hotel.

Mr. C. F. Wildey, so long and favorably known as the proprietor of the Cosmopolitan Hotel, at the corner of Chambers Street and West Broadway, New York, has leased the beautiful new building in 34th Street, just west of Broadway, and named it the Herald Square Hotel.

It is fitted up in the most luxurious manner and will be run upon the European plan, with rooms at the rate of \$1.50 per day and upward. It is in the center of all the amusement activities of the city, and with Mr. Wildey's well-known reputation as a hotel-keeper, the "Herald Square Hotel" will undoubtedly do a very large business.

At the same time Mr. Wildey will continue to run the Cosmopolitan Hotel at the corner of Chambers Street and West Broadway, which is now the only first class hotel in the Hardware district of the West Side.

Thousands of merchants who visit New York are familiar with the old "Cosmopolitan," and when they wish to stop down town, naturally patronize it. But those who wish to stop up-town cannot do better than to try the new fireproof "Herald Square Hotel" in West 34th Street, near Broadway.

It is estimated that 4,309,000 cows would be necessary to produce an amount of butter equal to the quantity of oleomargarine manufactured and sold in the United States.—*Exchange*.

Thirty-six foreign vessels, having an aggregate tonnage of 57,556, met with disaster in American waters last year.—*Exchange*.

PROGRESS OF PARIS EXHIBITION...I.

THE EXHIBIT OF MINING AND METALLURGY.

Visitors to the Exposition grounds in Paris are astonished at the rapid progress that has been made in the work during the past summer, especially in the construction of the buildings and palaces.

On the Champ de Mars and the Invalides new cities have sprung up as if touched by magic. Looking from the Alma bridge toward Paris the view is most attractive. The two banks of the Seine appear covered with immense skeletons and steel framework alternating with buildings practically finished.

On the right bank, next the bridge, is the immense palace in which over one hundred congresses will be held during the exposition. It is in the Louis XVI style, of fine appearance, and will stand out against the foliage of the Cours la Reine, putting a fine and distinguished feature of the end of the Eighteenth Century into a corner of the Exposition which will be filled with constructions of modern style. A little further along, towards Paris, is the Horticultural Palace. This building is the principal motif of this part of the right bank of the Seine, and will be the particularly charming spot for the weary at the Exposition who will seek rest in flowers and verdure. This palace is composed of three conservatories. Everywhere will be flowers, suspended masses of greenery and dense verdure and for decorations, simple wooden trellising marvelously designed by famed special artists.

From these conservatories, which will be really a superb French garden, a royal staircase, thirty meters wide, will descend to the river, right to the shore of the Seine.

Numerous fountains will be arranged in the conservatories, fed with water from the four sources of water supply for Paris—the Seine, the Curcq, the Yanne and the Arve. All this seen by night, with the electric light effects on the vari-colored glass, with luminous reflections on the river lying at one's feet, will be an enchanting sight.

One of the most interesting places at the Paris Exposition will be the Palace of Mines and Metallurgy. This palace is situated on the Champ de Mars. It forms the angle of the buildings constructed on the side of the Avenue de la Bourdonnais, at the foot of the Eiffel tower. The facade is stretched along the vacant space left at the axis of the tower, forming a continuation of the Palace of Liberal Arts. A monumental door, surmounted by a dome, occupies the middle of the facade. Lateral towers frame the motif. It is an inspiring edifice which will pleasingly round out the general view of the buildings on this side of the Champ de Mars. A monumental porch gives access to a circular hall situated under the dome. This hall opens on a great rectangular nave crowned with a vast electric lantern.

The galleries are established as prolongations of those of the Textile Palace. The first story will be reached by three monumental stairways, one facing the main entrance, the others at the sides. This palace will have an area of 16,000 square meters, of which 6000 are on the first floor.

The central dome has the form of an immense tiara. A concrete gallery is arranged on the facade situated on the Champ de Mars gardens. The windows are at the level of the wall. The bell tower which will surmount the porch of the entry will receive a chime of thirty-two bells. The diameter of the big bell will be one meter at the mouth, and that of the smallest, 19 centimeters. The large bell will weigh 830 kilograms, and the smallest bell hardly

4 kilograms. The palace will cost about \$360,000 and will contain only mining products.

The mine exhibits proper, however, will be arranged at the Trocadero, installed under the gardens. Here will be the illusion of a regular mine in full activity. In these catacombs will be seen the extraction of gold; of silver; of lead; of the diamond, and of coal. Here the visitor may watch the complete working of a mine, and the exhibit will be continuous. The mine will be reached from the Rue de Magdeburg and the exit made on the territory of Transvaal, in whose galleries will be seen a production of

A. S. CAPEHART,
DIRECTOR DEPARTMENT OF LIBERAL ARTS AND CHEMICAL INDUSTRIES.

the ore in the form and manner practiced in the Rand country. In these subterranean passages will also be installed the retrospective mining exhibit, showing the working as practiced in the most distant age of the Phœnicians and Romans.

In the Transvaal mining exhibit will be seen the sorting and grinding of ore, also a foundry for gold and a laboratory. In this Transvaal exhibit will be a complete surface underground model in miniature. The surface workings of famous Transvaal mines will be shown in every detail by a relief model 25 feet long, with buildings, head gears, tailings, keeps, trees, grass veld, etc., carefully modelled and constructed to a scale of 1 in 300. The underground working of a gold mine will be demonstrated by a minutely prepared working model. Nothing will be omitted—shafts, drives, winzes, stones and dikes will be shown all complete and on a similar scale to that of surface workings. The total depth shown will represent 2500 feet. The

model will thus appear at a height of from eight to nine feet. A large scale model of the typical reduction plant, scale 1 in 60, will be put in full working order. The plans were all compiled in Johannesburg, and 200 photographs were taken comprising surface views in every possible aspect.

The Palace of Mines is now under roof. The outside walls are being glazed, the garden facade is completed; also the woodwork for the west facade. All the iron work in the transverse gallery is in place.

The Palace of Civil Engineering and Transportation will be one of the handsomest at the Exposition. Situated at the right of the "Watercastle," on the west side of the Champ de Mars, it stands between the Palace of Chemical

CHARLES H. SIMMS,
ASSISTANT DIRECTOR DEPARTMENT LIBERAL ARTS AND CHEMICAL
INDUSTRIES.

Industries and that of Letters, Sciences and Art Processes.

In its construction this palace exemplifies the very best application of iron in construction work. The trusses are entirely new in form. The facade of the palace, consisting of a great central porch flanked by two lateral wings, will bear a colossal colored frieze, done by Andre Allard. The design will recount the history of transportation from the time of the heavy chariot, sliding on tree trunks, of the earliest of earth's inhabitants, to the present day of luxurious electric automobiles and monster locomotives. The frieze is in the Florentine Renaissance style, and the sculptor will tint the figures delicately to give somewhat the impression of the famous friezes of Florence. Civil engineering will be represented in the decoration by life size figures of workmen of all constructive trades—plumbers, roofers, tinnerns, etc. In the Palace of Civil Engineering automobiles and bicycles will occupy a surface of more than 77,000 square feet. This palace is entirely roofed and the interior painting has commenced. In the way of metal construction the mounting of the framework of the grand nave of the Grand Palace of the Champs Elysees is about completed. The small Palace of Fine Arts and the Invalides Buildings are almost finished. At the

Electricity Palace great activity is now displayed. This palace is located at the lower end of the Champ de Mars. Being 70 meters in height it towers above all other buildings on the Champ de Mars, and with the Chateau d'Eau and the two semi-circular rows this palace will give a marvelous perspective to this avenue. The facade, consisting of nine bays of stained glass and ceramic, will be in hammered zinc. In the daytime, with its glass and sculptured work glistening in the sunshine, this facade will have a splendid effect. In the evening, with its irradiated turrets, its lights and its changing and phosphorescent balustrades the effect will be fantastically beautiful. A decorative group representing the "Genius of Electricity," also shedding shafts of many colored lights like a liquid mass of fire, will complete this wonderful edifice.

A. H. MATTOX.

Wrinkles for Cutlery Dealers.

Salesmen should remember that a pair of good carvers will outlive two steels, therefore customers' attention should be called to this, and whenever carvers are bought a steel should always be included in the purchase. Sellers of cutlery should impress on the buyer the importance of frequently using a steel, and should also be able to demonstrate the proper way of sharpening a knife on a steel. In my opinion the various ring knife-sharpeners on the market should not be recommended, as they produce only a short thick edge which is quickly dulled. When a customer complains that the cutlery is wearing quickly it is a sure indication that the quality is right.

When selling scissors the salesman should always remember that to work the blades without cutting anything is to injure them. When working blade against blade there should always be something for the blades to cut, and a thin piece of paper is generally handy. Most salesmen know the old dodge of drawing the scissor-blade between the thumb and finger to soften the working. Some particle of natural grease is imparted to the cutting-edges, and they work more smoothly afterwards, but, all the same, the blades of scissors should never be worked bare one against the other.

Scissors, above all cutlery articles, should be entrusted only to very competent workmen for grinding. Users of hollow-ground razors should be most careful in stropping them; the thin edge should not be unduly pressed on the strop, and, above all, the thinness of the edge should not be proved by pressing against something hard or another edge, as is very often done. A little sweet oil on the strop now and again is a great improvement. Street grinders who do not use a wet grindstone injure cutlery beyond repair. It has come under my notice that the street-grinders, many of them foreigners, who call upon butchers only at given intervals, always use a wet stone, but those who call upon private customers do not.

My friend the Sheffield representative says that there are a large number of ironmongers' assistants (not apprentices) who cannot define the difference between a left and right-handed bricklayers' trowel, and many principals who do not know that these trowels are not hardened the same all through the blade. If they were so hardened they would fly. Only the bellied edge of the trowel is hardened. This bellied edge comes in for most of the work, including breaking up bricks to a given size. Let an assistant practice breaking a brick with a trowel, and he will then soon learn to distinguish a left from a right-hand trowel.—*Ironmongery (Eng.)*

Rain has never been known to fall in that part of Egypt between the two lower falls of the Nile.—*Exchange.*

In the United Kingdom there are 300,000 persons named Smith.—*Exchange.*

SEWING MACHINES AND THE HARDWARE TRADE.--IV

The Hardware Jobber must necessarily add new departments to his stock to keep pace with his ideas of expansion and desire to increase his business, and I believe it more to the advantage of the jobber to take on additional lines of goods rather than attempt to travel territory that it requires large credit allowances to equalize freights with other jobbers more favorably located. The cost of working territory far away from your own natural boundaries is expensive, and while it may pay a small profit, it is often secured at the expense of cutting prices that do not really benefit any one but perhaps the railroad companies. Why is it not better to carry a larger variety of goods and travel less salesmen, thereby giving your neighbors the benefit of the trade in their own legitimate territory?

I do not mean to recommend that the jobber add lines that it will be necessary to go outside of the Hardware dealer to canvass, but to take up such goods as can be sold and profitably handled by the retail Hardware dealer. The sewing machine offers itself as one line that can be successfully handled by the jobber and retailer alike and besides make a saving to the consumer. Why should the consumer pay the expense of an agent to bring a machine to his house, call several times to see it and be satisfied with selling perhaps two or three a week? Nearly every housewife knows how to run a machine and with a few sensible instructions in printed form can take the ordinary sewing machine and use it without trouble or difficulty. Why then should they not be purchased through the regular channels of trade? If they should be so handled, then the natural source from which they should be sold is the Hardware dealer.

Many Hardware dealers hesitate to take hold of the line believing it will be necessary to have additional help and experienced operators of sewing machines. Experience has proven this unnecessary. The principal requirement for the retailer is that he thoroughly convince himself that he is selling a sewing machine that is equal to any on the market. With this confidence he recommends the machine to his customer in the same manner as he does a washing machine, bicycle, or any article which he feels is thoroughly reliable. The truth is that he knows as much comparatively about the actual operation of a sewing machine as he does about a washing machine, but experience in selling the washing machine or bicycle has convinced him that it is a first-class article and so he recommends it to his trade. Another point in favor of the Hardware merchant is the fact that he can offer the customer a large inducement in the way of price. This will be at once interesting to the purchaser, so that all there remains for the salesman is to convince the buyer that he is furnishing as good a machine as can be made, and saving him money besides.

Our experience in selling machines extends over several years, and I am sorry to say has not been at all times entirely satisfactory. Our firm was one of the first Western jobbers to take up this line, and we were compelled to rely on our own judgment and experience, which were both limited in this direction. At this time, however, our trade is entirely satisfactory. Like many others, our first efforts were directed in an endeavor to see how cheap we could buy and sell, which of course is a mistake. The comparative cost of good material and workmanship and poor is only a few dollars at the most. With the good machine you build a lasting trade; with the cheap one you make a less profit, besides incur expense in having them

returned and the loss of customers, not only in this particular line but perhaps in others.

The difficult proposition in taking up a line of machines is the fact that you cannot decide positively whether the line you take hold of will be satisfactory or not without a few months' experience. The manufacturers are thoroughly alive to the present requirements of the Hardware jobber and any trouble from getting out poor machines can easily be avoided. The guarantee is generally five years or more, but the loss by reason of this to the jobber is very small. For instance, out of a lot of seven carloads of sewing machines, we have but one machine upon which a complaint has been made. I mention this as a comparison between the cost of selling sewing machines and say bicycles or even washing machines.

The most difficult proposition the jobber has to deal with in selling sewing machines is his salesmen. Our firm found it was necessary to adopt more than ordinary measures to

C. E. HUGHSON.

acquire their co-operation, many of them feeling that they were not familiar enough with sewing machines to present them to their customers in the proper manner, and in some such cases, we have felt obliged to send a special salesman with them for a few weeks. This has always had the desired effect, and the regular salesman soon learns that the line is not a difficult one to understand or sell and that it materially increases his sales and profits, and he is always ready to learn anything new in regard to sewing machines as much as anything else he sells. After the salesman has become interested, this department will cause as little labor and less attention than almost any department representing as large an amount of sales and profit. The salesman not only realizes the material increase it means in his sales, but he will take an unusual pride in the number he is selling.

Another way to interest the salesman, which was some time ago adopted by our firm, is to offer as a prize a machine for selling a certain number during one month. This prize was secured by a portion of the travelers, and with them it had a double effect: it introduced the goods to our trade; besides, the salesmen securing the prize in most cases would take it to their home, and when they were assured by their own families of the good qualities of the machine, it gave them absolute confidence in the goods they were selling. I speak of these measures to interest the travelers as I am positive that it requires more than

ordinary attention, and no matter how good a machine you handle, unless your salesmen take an interest in selling, nothing but very meagre results can be obtained. Their co-operation once secured, the success of the sewing machine as an addition to the regular line of the Hardware jobber is certain. We have been surprised to see our trade on sewing machines gradually increase, and especially has it done so in the past year from one month to another until we were able to dispose of about two carloads in our limited territory during the month of October.

Again, the sewing machine is not a seasonable article like bicycles and many other lines now handled by Hardware jobbers. It sells all the season round, and it would be hard to tell just exactly the best month in the year for their sale. This fact makes them a more desirable article to handle than many others. Styles do not change often enough to offer any chance of loss from this cause so they are as safe to handle as the most staple article in the Hardware line. As this subject has already been discussed by competent authorities, I do not feel that I can add anything more that would be of interest to our friends.

Sioux City, Iowa.

C. E. HUGHSON.

Glasography.

Glasography is the name given by the inventor to an improved process (patented in the leading countries of the world) for producing on glass by mechanical means any design in transparent colors. No process has hitherto been discovered enabling manufacturers to do this, for although it was found possible to apply colors to glass, yet these did not attain a sufficient transparency to form a perfect substitute for stained glass. The subject of the present invention is a process which will permit the accomplishment of the aforesaid end in an exceedingly simple and easy manner. The work executed by this process is said to excel all results hitherto attained by other processes.

The process is applicable to many industries, but is more particularly adapted to (1) the manufacture of artistic and beautiful window glass for use in place of stained glass or hand-painted windows; (2) the manufacture of tiles; (3) the production of artistic and brilliant advertisement plates in glass.

The process allows of an unlimited number of copies being produced in any color or number of colors from any design, simple or elaborate. The colors are warranted to be permanent, and not to lose their brilliancy through light or age. They adhere fast to the glass, and only wanton injury can destroy the work.

For all sanitary purposes, laundries, lavatories, stables, cellars, bathrooms, hospital fittings, mortuaries and operating rooms, a material that can be cleansed so easily, is so little affected by chemical action or deleterious influences, and is so absolutely impervious to vermin, fungi or germs, cannot fail to commend itself. For the lining of machinery or engine rooms, more especially where it is important to prevent as far as possible dust or grit falling upon and clogging the more delicate mechanism, the glass tiles are suitable. For dairies, larders, pantries, refrigerators, butchers' shops, fish shops, milk shops, and shop fittings of every kind in connection with food supply, the cool and cleanly appearance and the ease with which such fittings can be cleaned, warrant the claim of these glass tiles to combine a highly artistic effect with an important sanitary improvement of the time. From a hygienic point of view, a glass surface is even less subject to contamination than polished marble, while its cheapness brings it within reach of the smallest establishment.—*Hardware Trade Journal (Eng)*.

It is no unusual thing for a vessel plying between Japan and London to carry 1,000,000 fans as a single item of cargo.—*Exchange*.

Our Lessened Trade with Canada.

Three spots on the world's commercial map of 1899 appear in unsatisfactory colors so far as the trade of the United States is concerned. These spots are Japan, France and Canada. As to Japan and France, the explanation is simple. Japan is cutting down her imports enormously, due to the adoption of a new tariff mildly protective, while France is not compelled this year to look abroad for breadstuffs as was the case in 1898.

It is with Canada, our next door neighbor, that the general trade account has a more unsatisfactory appearance than that with any other part of the world. This fact is the occasion of considerable comment on the part of British trade journals, which are gleefully announcing that the American manufacturers are so busy with the home market that they are compelled to neglect that across the border, and that as a result the British manufacturers are making rapid gains in their attempts to recapture the Canadian markets. This assertion is apparently justified by the fact that the latest official statement of exports from the United Kingdom shows that her exports to Canada in the nine months of 1899 ending with September were £5,004,850, against £4,498,181 in the corresponding months of last year, and £3,875,335 in the corresponding months of 1897; while our own statement of exports to Canada shows a total in the nine months ending with September of \$63,026,224, against \$68,932,654 in the corresponding months of last year.

A detailed study of the export tables of the Treasury Bureau of Statistics shows that the reduction in our exports to Canada in 1899 relates in but very few cases to manufactures, and is almost exclusively in agricultural products in which there has been a general reduction in the demands upon us from abroad, due to better crops in other parts of the world.

The Production of Slate.

Various materials have been proposed to take the place of slate, but the ease with which this substance can be cleft assures for it a permanent use, and it is interesting to note the actual importance of its production.

France holds an important place in this respect, and ranks second among the slate-producing countries. In Marne et-Loire the slate quarries produce annually about \$4,000,000 worth. Her principal competitor up to the present has been the United Kingdom, where, in Wales, Cumberland, Westmoreland, Ireland and the Isle of Man, are situated quarries whose production last year amounted to nearly \$8,800,000. But it will soon be necessary to place the United States well up in the list of competitors, for this special industry has assumed considerable proportions here, and slate to the value of \$3,600,000 is produced annually. Small quantities are also quarried in Canada, Belgium, Germany and India. The estimated production of the entire world is valued at \$16,000,000.

Substitute for Glass.

In Manila the natives have a queer substitute for glass. It is a bivalve shell of about nine inches of surface, so transparent that print can readily be seen through it, and admitting a mellow light in a room where it is used as a window glass. The shell is an attractive object, perfectly straight and in appearance resembles isinglass. One would almost imagine that it was some skilful invention of the natives, could not the growth rings be readily observed. The other side of the shell is perceptibly rough, while the interior is perfectly glazed over, and in the light has the pearly lustre found in many of the thin-shelled, oyster like mollusks of the tropics. The shell is well-known in China, where it goes by the name of the window oyster. It is employed there also for windows and used in lanterns.

NEW GOODS AND SPECIALTIES.

Palmer All Steel Pulleys.

Palmer Hardware Mfg. Co., Troy, N. Y., are manufacturing the two all steel pulleys illustrated below, Fig. 1 showing the one marketed under the name of the "Common Sense" and Fig. 2 being the Machine Mortise. Among

FIG. 1.

FIG. 2.

the advantages claimed by the manufacturers, attention is called to the solid closed back cord housing, which covers the entire cord bearing on the wheel, and curved around and equidistant therefrom at all points. The attention to this important detail positively prevents the cord from leaving the wheel, and this as may be well understood is a feature of great importance to the builder as well as to the house owner. Reference is also made to such advantages as these: There is no breakage in use or in transportation on account of the rigidity and strength which are involved in their peculiar construction. Then again, they are light in weight, which insures invariably lower freights than would be possible with heavier castings. Attention is called to the fact that their wearing qualities are much better than those of cast iron, and that they have been subjected to extreme tests for both wear and strength, before putting them on the market, and have been invariably found superior to cast pulleys in every particular.

The Champion Wheelbarrow No. 5.

The Bryan Mfg. Co., Bryan, Ohio, among the many wheelbarrows of various descriptions manufactured by them, take special pride in their Champion No. 5, which

FIG. 1.

possesses the latest invention in barrow trays. This is a wheelbarrow that is built for use and hard use. The tray particularly, Fig. 1, is the new part, and is made exceptionally strong, and every assurance is given that it will never give away at the corners like a bent tray. It is noted as being a very simple tray, no bending; hence anyone can repair it. The weak point in most trays is that the angle of the tray strikes the ground when dumped, and the

natural outcome of the usual bent-wood tray is to return to the straight lines that belong to them by nature. In the Champion No. 5 illustrated herewith, Fig. 2, the manufacturers claim there is no desire to leave the position where they are placed at the factory, as everything is all straight and natural. Where the stress comes in regard to the use of the same, the barrow has three thicknesses, and these

FIG. 2.

are all nailed and clinched together, giving it abundant strength. At the same time, compared with barrows of equal importance, it may be mentioned that they are inexpensive as far as price is concerned, and on investigation of their advantages by any dealer handling these goods, they will be found a useful addition to their stock.

Triumph Saw Set.

Henry Disston & Sons, Inc., Philadelphia, Pa., are bringing to the attention of the Hardware trade and those interested in tools of this description, their new patent Triumph Saw Set, which is a saw set especially adapted for cross-cut saws, circular saws, and equally as desirable for all small saws. The idea embodied in this saw set is one that will commend itself to every user of a saw-setting tool. The principal feature, as will be seen by reference to the illustration given herewith, consists in the use of two plungers operated by two levers or handles, the pressure on the lower lever forcing plunger (D) against the body of the saw, thus holding it rigidly in position, preventing slipping, while a continuation of pressure on the upper lever operates plunger (C) in the act of setting the tool. In its action it gives every evidence of being easy and

powerful, and while it will perfectly set wide and heavy saws, it is particularly adapted for narrow blades, such as web saws, narrow band saws, etc. Another important point is that the head of the set is made open, which enables the operator to quickly adjust the saw set to the teeth, as the work is in plain view at all times. The gauge (B) for regulating teeth of set, has a wider bearing than in many saw sets, which does away with a tendency to incline the tool to one side or the other, which would be apt to

give an uneven set to the teeth. In this saw set this is entirely obviated. The anvil being fitted with four beveled surfaces, makes it eminently suitable for the different sizes of saw teeth. The Triumph Saw Set is manufactured in three sizes, the same principle being involved in each, varying more particularly in size, the smaller size being suitable for hand saws, back saws, web saws, narrow band saws, etc.; medium size for small, circular and similar saws; and the large size for cross cut saws, circular saws, etc. The principles involved in the construction of this saw set make it desirable for a Hardware dealer to become familiar with the same, as they may present features of importance not otherwise obtainable.

Hoffman Surface Spring Hinge.

The Hoffman Hinge Co., Cleveland, Ohio, are putting on

the market a Spring Hinge which we illustrate herewith. It is suitable for screen doors, windows, ice boxes, and wherever a hinge of this description can be utilized. Instead of the usual coil spring that is the principal feature of most spring hinges, a flat steel spring is substituted in the construction of this hinge. And this bears directly on the cam in the centre against a steel pin, with a movement in opening and closing the door of not more than one-eighth inch. The point is made by the manufacturers that the door will stay in any position desired beyond that of being half open. Also that screen doors can be taken down and replaced by simply removing the pin in the hinge, obviating the use of a screw driver. The manufacturers also claim that the hinge is practically indestructible, as in the absence of a coil spring, usually considered an element of weakness, there is no twang; that it holds the door when it is firmly closed; that the spring cannot become weakened, as there is a movement so limited in extent in its operation, and that the casting has a lessened risk in regard to breakage arising from the fact that the strain is directly on the centre, and not as usual on opposite corners. The manufacturers state that the sale of this hinge has been beyond all anticipation, and judging by the orders already booked for the coming season, it is favorably received in every section of the country where its merit becomes known.

The Perfection Eye Butcher Saw

George H. Bishop & Co., Lawrenceburg, Ind., are offering the Hardware trade and those interested, a Butcher Saw

which is provided with an eye of improved design, as is shown in the accompanying illustration. The eye is of blued steel, making a pleasing contrast with the polished steel otherwise used in its construction. The steel pin which enters the eye is made oval in shape, and fits in a very

snug manner for the purpose for which it is intended, preventing it from binding in the eye, and also prevents the twisting of the pin or the unexpected turning of the blade. The operator by these advantages obtains a strong tension, is enabled to keep the blade stiff, preventing it from buckling. It is referred to by the manufacturers that in the use of a butcher saw, if the blade is tight or loose it is liable to jump, possibly cutting the hand holding the meat, and frequently resulting in a broken blade; but by the improvement above noted, the manufacturers claim the eye secures a stiff blade, which is always essential to the best and most expeditious use of the tool.

Columbia Reaming Machine.

E. G. Smith, Columbia, Pa., among the many specialties manufactured by him, is placing before the Hardware and

machinery supply trade, the Columbia Reaming Machine, which is shown in the half-tone illustration accompanying this article. This is a machine designed and built especially for reaming bored holes. The reamer is driven by a worm on the cone pulley shaft, working in the worm wheel on the vertical shaft which carries the reamer. The vertical shaft runs on a fixed step, and the pulley feeds down upon the reamer by its own weight. The two uprights are free to move in a straight line at right angles to the driving shaft, and the pulley to be reamed is then free to slide parallel to the shaft, so that it readily accommodates itself to the reamer without crowding to either side of the hole. The worm wheel is made with an inverted cup overhanging the teeth, which shields the chips and keeps both worm and wheel clean. Suitable sockets are provided for the different sized reamers. Small work such as collars, gear blanks, etc., may be held by a dog or carrier, the ends of which will be held by contact with the upright arms of the machine. All the conditions required for good work seem to be provided in this machine. As a uniform and not excessive speed can be given to the reamer, the freedom of movement laterally insures a true hole, and the feed also is apparently all that is desired for this class of work.

Acme Poultry Netting.

Detroit Fence Co., Detroit, Mich., are placing on the market for the approaching season the Acme Poultry Net-

ting, an illustration of which is given herewith, which they are manufacturing to meet the demand for an all-purpose fencing, in a form which has long been wanted, and is always appreciated by the users of fencing, viz.: wire netting possessing an extra heavy top wire, a heavy bottom wire and

a heavy wire a little below the middle. This in connection with diamond-shaped meshes sufficiently small at the bottom to turn small animals, and with larger meshes at the top where less wire is needed, reduces the cost without any sacrifice of strength. This netting is constructed of No. 18 galvanized steel wire, with $1\frac{1}{4}$ -inch mesh at the bottom, gradually enlarging to a three-inch mesh at the top. The margin wires are No. 12 instead of twisted cable, and it is strengthened through the centre with another No.

12 wire, making a good light fence as well as a perfect poultry netting. The method of construction is such that the smallest chickens are kept from going through it. This description of fence has taken all the medals and diplomas wherever exhibited, and at the Columbian Exposition, received the highest encomiums passed upon any exhibit of this character. It is put up in rolls of 150 and 300 feet.

The "Federal" Bench Shear.

Chandler & Farquhar, manufacturers of machinists' supplies, No. 36 Federal Street, Boston, Mass., are placing upon the market the Federal Bench Shear, which we illustrate herewith. This is an admirable article for the purpose, the design combining strength and simplicity, being well adapted for which it is intended. It is strong, made in a

thoroughly compact manner, and in the construction of it, nothing but the best materials are used. It is intended to cut sheets or bars that do not exceed three-sixteenth inch in thickness. Within this limit, its usefulness is undoubtedly of exceeding advantage. It stands only eight inches high and weighs but thirty pounds, making it extremely portable and convenient in use.

Tin is a soft and ductile metal, taking the place in this respect between gold and lead. It can be rolled out wonderfully thin, and drawn to a very fine wire. Its chief use is as a covering to other harder metals, and especially those which quickly oxidize. Copper utensils are coated with tin, and tinned iron plates are among the most familiar objects met with in an ironmonger's workshop. Tin is also largely used as an alloy; gun metal and bronze are produced with its aid, and Britannia metal contains a large proportion of it. Tin is used in connection with lead to form solder, which is the chief factor in effecting repairs to metal goods.

The Port of Pango Pango.

Tutuila, the Samoan Island which falls to the United States in the recent arrangement completed between Germany and England, subject to ratification by the United States Government, becomes an extremely valuable addition to the possessions of the United States in the Pacific. With but a small area and population, which according to the Treasury Bureau of Statistics, are but 54 square miles and 4000 population, it possesses the most valuable island harbor in the South Pacific and perhaps in the entire Pacific Ocean. A representative of the *London Times* recently in Washington, who had visited and was thoroughly familiar with not only the Samoan Islands, but those of the Pacific generally, pronounces the harbor of Pango Pango in the island of Tutuila the best in all the Pacific and Pearl Harbor in the Hawaiian group the next in value as a harbor, the United States thus being the possessor of the chief island harbors and ports of call, supply and repairs in the Pacific Ocean.

Commercially the Samoan Islands singly or as a group are unimportant, so far as their local production or consumption is concerned, but extremely important in their relation to the commerce of any nation desiring to cultivate trans-Pacific commerce. Mr. Goward, who was sent by the United States Government to the Samoan Islands to arrange for a treaty with reference to the harbor of Pango Pango, said: "The capacity of this harbor is sufficient for the accommodation of large fleets; land locked, it is safe from hurricanes and storms and could easily be defended from land or sea attack at a small expense. In a naval point of view, it is the key position to the Samoan group and likewise to central Polynesia, and is especially located for the protection of American commerce. The Samoan archipelago is by reason of its geographical position in central Polynesia lying in the course of vessels from San Francisco to Auckland, from Panama to Sydney, and from Valparaiso to China and Japan, and from being outside the hurricane track, the most valuable group in the South Pacific. Situated half-way between Honolulu and Auckland, Pango Pango would be a most convenient stopping-place or coaling station for vessels or steamers either for supplies or the exchange of commodities. With the Pacific mail steamers making it a port for coaling, it would necessarily become the controlling commercial place in that part of Polynesia."

The above statement, made by Mr. Goward in 1887, applied simply to the harbor of Pango Pango, and its importance increases with the occupancy and complete ownership of the entire island by the United States, and becomes additionally important in view of the control by the United States of the Hawaiian and Philippine groups, the prospective construction of an isthmian canal, and the rapidly growing commerce between the United States and the great markets of Asia and Oceania, which buy annually more than a billion dollars' worth of goods, and nearly all of this of the class of merchandise which the people of the United States desire to sell.

The port of Pango Pango was, shortly after the treaty, surveyed by the United States Government and a coaling station was established last year. In considering the value of Tutuila and its harbor of Pango Pango, it is proper to add that the Samcan naval disaster of 1889, in which a number of naval vessels were wrecked during a severe storm, occurred in the roadstead of Apia, on the island of Upolu, and not in the land-locked and well-protected harbor of Pango Pango.

The butchers of Berlin have a curious way of informing their customers of the days on which fresh sausages are made, by placing a chair, covered with a large, clean apron, at the side of the shop door.—*Exchange*.

Self-Lighting Devices.

In the olden days, before lucifer-matches were cheap, Dobereiner's lamp enjoyed a certain amount of popularity as a means of procuring a flame quickly instead of by the laborious method of employing flint and steel. The arrangement consisted of a closed vessel containing some acid and a lump of zinc, which, when the apparatus was not in use, was suspended above the level of the liquid. When the lever was depressed the zinc and acid were brought into contact, a current of hydrogen was evolved, escaping through a tube, and, impinging on a mass of "platinum black" placed on the top of the machine, immediately burst into flame, so that a fragment of wood or a candle could be lighted thereat. Platinum black, or spongy platinum, is pure metallic platinum in such an exceedingly fine state of subdivision that it appears as a blackish powder; many other metals can be obtained in similar forms, and they then often exhibit properties quite different from those of the same elements when in the massive state.

Massive platinum is practically as permanent in the air as is gold, and hot or cold it is quite unchangeable; it does not oxidize, and it is difficult to dissolve or to attack in any way. Yet as black or sponge it possesses the curious property of causing the ignition of hydrogen when mixed with oxygen or air. Platinum black, however, does not ignite coal gas under similar conditions, even if it be previously heated; it gradually becomes red-hot in the stream of gas, but there the action stops short of an actual flame. On the other hand, whilst a cold piece of massive platinum remains cold in a current of coal-gas, warm massive platinum becomes quickly incandescent, and soon ignites the gas. By combining the two substances, accordingly, we have a method of automatically igniting coal gas.

A piece of platinum black in contact with a platinum wire is put in a position where the escaping coal-gas plays upon both, the sponge becomes hot and warms the wire, the wire then comes into play, getting steadily hotter until it incandesces and sets fire to the gas. Neither form of platinum will work without the other, and the wire is equally important with the sponge. Pure platinum black has the unfortunate defect of gradually losing its power when frequently and continuously exposed to the heat of the flame; but it has been found possible to make it into "pills," which are practically permanent. These pills are manufactured by soaking a mass of asbestos or some other porous refractory material in a solution of platinum chloride, and then reducing the metal by a suitable treatment.

An improvement has more recently been effected by substituting a wire of iridium for the platinum wire. Iridium is a rare metal which in most respects is very similar to platinum, but its melting-point is considerably higher, and so, provided it be reasonably pure, it has a longer life. A further improvement worked out by Simonini depends on replacing the wire by a mixture of rare earths, such as those of the incandescent mantle itself, for a hot mantle is capable of igniting coal-gas. Simonini prepares two mantles and adjusts them one inside the other; when "burnt off" the inner one is composed of about 60 per cent. of metallic platinum and 40 per cent. of thoria or ceria (the substances that make up the Welsbach mantle.) The outer one is approximately an ordinary Welsbach in constitution. When the gas is turned on the inner mantle acts the part of the sponge, and warms the envelope till it is able to take part in the process; the envelope then rises in temperature until it sets fire to the gas, when it incandesces and emits light in the desired fashion.

Many porous substances have the property of collecting within their pores a much larger quantity of certain gases than that for which there appears to be room, and these condensed gases, for some cause or other, are much more active and energetic than are the same bodies when not so con-

densed. In the case of freshly-ignited charcoal, for instance, the pores are full of air, and the burning mass behaves as a powerful deodorizer, because the oxygen is able to destroy putrid and evil smelling organic substances, which it does not attack so long as it is floating about in the atmosphere.

Tin.

The Phœnicians are known to have worked tin mines in Cornwall many years before the invasion of this country by Julius Cæsar, states a recent writer in the *Ironmongers Chronicle*. It is conjectured that the earliest discoveries of the metal were made in this island; for the tin imported into Italy at this period came from Britain, no mention being made in contemporary writings of any other district from whence it was obtainable.

Pliny mentions Cornish tin and several ingots of this metal have been found on the sites of the Lake dwellings of Europe; traces of tin, too, are found in contemporary bronze implements. The tinstone ore taken from the mines of Cornwall presents to the inexperienced spectator a very disappointing appearance; and those of our readers whose only acquaintance with it has been made in the workshop of an ironmonger can form little idea of tin in its raw state. Few specimens of pure tin ore are found. The native oxide of tin, which is formed in quadratic crystals, should be colorless, but is generally brown, owing to the presence of manganic or ferric oxide. There is also a fibrous ore commonly called wood tin. Before mining was carried on at any great depth, tin was largely procured by "washing" in the valleys; the streams being regulated so as to wash the crystalline rocks and slates. In this way tin crystals, which had become separated from their matrix, were easily collected.

The greater portion of tin now mined in Cornwall is obtained from the older granite and the killas, or slate beds. The associated minerals, all of which are now turned to commercial uses, that are met with in conjunction with tinstone are wolframite, mica, tourmaline, arsenide of iron, arsenic, etc.

Of course the tinstone has to pass through many processes before it becomes the mercantile tin that is purchased by ironmongers. It may be interesting to briefly trace its career. Crude ore requires much washing and cleansing before it is ready to be "roasted"; which operation burns away sulphur and arsenic, both of which minerals are generally present. Any iron pyrites that have been there is converted into a light oxide, which is afterwards washed away. Copper is frequently present, but a diluted sulphuric acid extracts it. There are many modern contrivances, by the aid of which the process of preparing tin ore from its crude state is more accurately performed than in former times. None of the products extracted is now wasted, all being converted into a marketable commodity.

The smelting of the ore is done in a reverberating furnace; anthracite coal is used, and lime or fluor spar added, in order to form a fusible slag. The molten metal passes through a stirring process, locally termed "poling" from the traditional use of a wooden pole or branch; this being taken preferably from the apple-tree.

A settling process (at a melting heat) still further purifies the metal, and the upper portion of the "pot" is then run off into the familiar ingots. The lower part (except the very bottom, which contains a residuum, to be again purified) is also run, and is the "block" tin of commerce, the upper portion being known as the best grain tin.

Besides the tin extracted from the mines in our own country there are several other important seats of the tin industries, the principal of these being situated in Bohemia in Saxony, France, Spain, Malacca, Banco, Chili, Peru, and Bolivia. Mines, too, have been opened up in recent years in Victoria, New South Wales, and the United States of America.

RECENT TRADE PUBLICATIONS.

HARRISON BROS. & Co., Inc., Philadelphia, Pa. Under the title of "One Hundred Years of Successful Paint Making," the above well-known concern distribute a very handsome booklet, printed in an unique style on extra heavy paper, artistically embellished, and with extra adornments to make it noticeable. A brief and interesting history is given of the origin, method and present scope, equipment and facilities of their pioneer paint-making establishment, which is claimed to be the largest in the United States. In addition to this is presented a description of its exhibit at the National Export Exposition at Philadelphia, which closed recently. From the general appearance, it was no doubt used largely as a souvenir during the continuance of the Exposition, impressing the visitors greatly of the extent and magnitude of the business to which this souvenir called such noticeable attention. It gives in a very interesting manner a history of the growth of their great business, which was established in 1793, carrying the history along with all the additions from that time to the present, and the names of the men who at different periods were prominent factors in the volume of trade which they succeeded in attracting by their excellent product. It is an unique specimen of what can be done in the way of novel advertising, and was no doubt successful in accomplishing to the fullest extent the intentions of its originators, as its varied contents show the work of a master hand in the business of exploiting.

BRIDGEPORT CHAIN CO., Bridgeport, Conn. Catalogue No. 6. A pamphlet of forty-four pages, embracing in its contents all the different styles and varieties of wire and flat metal chains, for which this company is noted in the Hardware industry, including their well-known "Triumph" chains, "Brown" chains and "Perfection" twisted link chains. These are made and used in all their chain specialties, including halter chains, tie-out chains, kennel chains, cow ties, heel, rein, trace and stake chains, dog leads, couplers and post, key and curb chains. Among their Hardware specialties and metal stampings they also illustrate the "Triumph" halter snap, Novelty snaps, steel rings and S hooks, steel hooks, swivels, and swivel rings and well chains. Special attention is also called to their "Monarch" sash chain, to which has been added this season the "Competition" chain, which is intended to supply a demand for a chain lower in price than the "Monarch," and yet one possessing a sufficiently good quality to make it commendable. The catalogue is a very interesting and exhaustive one, and shows the entire line of specialties, well illustrated, for which the company have for years been extensively known throughout the trade.

THE PHILADELPHIA LAWN MOWER CO., No. 3107 Chestnut Street, Philadelphia, Pa., have just issued their annual catalogue for 1900, which is the finest specimen of trade literature ever put out by this enterprising concern. It is about seven by ten inches with a specially designed and colored cover. In addition to the comprehensive description of the various machines manufactured, the book is interspersed with a number of half-tone engravings reproduced from photographic views of many handsome residences in and around Philadelphia, showing the extensive and well-kept lawns with the Philadelphia Lawn Mowers in use. Some twenty-seven styles of hand and horse mowers are shown, among them being several new and improved patterns. One of these, style XX, is a five-blade

machine with a twelve-inch wheel, a seven-inch cylinder and a steel frame. This combination produces a remarkably easy-running and clean-cutting mower. The new roller-bearing device has also been perfected and the company will offer several styles that give promise of becoming popular where easy-running qualities are desired. A copy of this elaborate catalogue will be mailed to dealers on request.

HARRIS MFG. CO., Cleveland, Ohio, manufacturers of the Cleveland Automatic Acetylene Gas Generator. Pamphlet catalogue of 32 pages, describing in a very artistic and graphic manner the interesting features connected with the manufacture and sale of acetylene gas. The pamphlet is illustrated throughout with a number of buildings, stores and factories in Cleveland, Ohio, and vicinity, where the goods of this company have been introduced. The pamphlet possesses interest to those identified with the sale or manufacture of acetylene gas, the importance of which is daily being made manifest.

P. & F. CORBIN, New Britain, Conn. A very handsome catalogue of 24 pages, covering the Corbin Liquid Door Check and Spring, now being made by that firm, under Case's patents. This is a very handsome pamphlet, on excellent coated paper, with superb illustrations, as is usual with their literary department, showing in its contents all the various matters of interest in connection with this door check and spring, giving full illustrations of the style required for each particular hand for any possible door; showing the inner construction of all the parts, every one of which has a specific number by which it may be ordered, in case of any break-down, and a full set of particulars governing the entire outfit. Included in the contents of this pamphlet is given a fine illustration of the Park Row Building, New York, and also the United Gas Improvement Co.'s building in Philadelphia, both of which immense establishments are fully equipped throughout with the Corbin door checks and springs, for the sale of which this catalogue has been especially prepared.

CORBIN CABINET LOCK CO., New Britain, Conn. A very handsome booklet prepared in the highest style of art for which this company is noted in all their publications. This particular booklet is devoted to explaining the pin locking mechanism in use by the above company in the high-grade goods for the manufacture of which they have been favorably regarded by the trade for a long time, especially in connection with post-office work. This fine mechanism has been made to apply to several of the various grades of locks manufactured by them, and is fully protected by patents, so that it can be used in cabinet locks and padlocks only by the above company. The devices and designs are handsomely illustrated throughout in a very interesting and artistic manner, and are well worthy the interested attention of the Hardware trade distributing similar goods. The company use this mechanism in its drawer locks, chest locks, wardrobe, locker and cupboard locks, Sub-Treasury and safe deposit locks, adding to the line desk, trunk and suit-case locks, and also letter-box locks, as well as pad locks. It is an unusually attractive publication.

FRED. J. MEYERS MFG CO., Hamilton, Ohio. 200-page catalogue for 1900, including their large and extensive line of wire goods of every description, besides the vast number of specialties with the manufacture of which this house has been associated for many years; embracing bird cages and

bird cage hooks, sifters, screens, street brushes, traps, clothes lines, poppers, broilers and a great variety of wire kitchen utensils; fire guards, wire cloth, bank and counter railings, wire fencing, weather vanes, finials, roof cresting, etc. This is one of the most important catalogues yet issued in this line of special work, being extremely complete, full of interesting matter, and from which almost anything in this particular line could be selected. The Eastern representative of the above company is F. J. Mattison, No. 127 Duane Street, New York, who has been long recognized by the trade in connection with this important factory.

F. & N. LAWN MOWER CO., Richmond, Ind. Illustrated catalogue of twelve pages, of the lawn mowers formerly made by the Champion Lawn Mower Co., of Richmond, Ind., which includes Rowlett's Champion, Perfection and Perfection high-wheel lawn mowers and Chief horse-power lawn mower, with or without attachment. It is a nicely-printed catalogue in which illustrations are given, showing all the important features of the lawn mowers described, their ease of adjustment, and the strength and durability of the various features that have made them possess the popularity that has been associated with them for so many years.

Advertisers' Corner.

Advertising presses the button, and the advertiser must do the rest.—*Ad Sense, Chicago, Ill.*

One unreasonable claim in a business announcement will cast suspicion upon all other claims in the same advertisement, no matter how fair and reasonable these may be.—*Printers' Ink.*

In an advertisement, as in everything else, it is poor policy to make a division of energy. One good point forcefully presented is better than a dozen arguments poorly made.—*Advertising Experience.*

In advertising, as in vegetation, you must plant and watch the growth thereof, carefully watering, pruning, and caring for the plant generally, until it blooms and bears fruit.—*Liquor Trades' Review, New York.*

Advertising is the silent salesman that does not sell the goods, but prepares the buyer for the buying; that assists him by telling him what he needs, and directs him by telling him where he can buy it.—*Press and Printer.*

If the copy is right it will do some good, no matter how injudiciously or how expensively it is placed before the public. If the copy is poor and doesn't tell the advertiser's story, it will do practically no good, no matter how extensively or with how much judgment space is bought.—*Charles Austin Bates.*

Business men cannot learn too much about advertising. If you are too busy with other branches to attend to your advertising yourself, the more you know about advertising and its methods and results the better you will be able to judge the ability of the advertising man you employ, and the results of his work.—*The Ad Writer.*

The adwriter who simply writes will never make much of a success. He must be able to discover quickly the talking points of the business. He must be able to elicit from the business man the interesting facts about his business—the facts that the public would like to hear—the facts the telling of which would create the desire for purchasing. After you have found out what you really want to say, the battle is two-thirds won.—*Charles Austin Bates.*

More advertisements are wrecked upon the rock of illiteracy than upon any other, for if the literary sense be required to make an acceptable book, the only object of which is to please, how much more essential it is in an advertisement, the object of which is to persuade people to spend their money. It may be true, indeed, that the majority of advertisement readers are not literary critics; nevertheless, every one of them would be captivated by an eloquent speaker and bored by an illiterate prosier. Good advertising is nothing more than transcribed eloquence.—*Drugs, Oils & Paints.*

Advertising, particularly mail order advertising, is founded to a great extent on the faith of people in their fellow-men. Without such faith, all advertising would be unprofitable. It should be the aim of every advertiser to nourish and conserve this faith by honest and honorable dealing, for upon its retention and extension the future influence of advertising depends. The more people believe in the published statements of advertisers, the more profitable will advertising become. No temporary advantage that may be gained from a deviation from the straight and narrow path should be allowed to becloud this idea.—*Printers' Ink.*

Effective results in show windows are often produced by the aid of mirrors, doubling the exhibit, or even seeming indefinitely to extend it. A curious illustration of the effectiveness in such use was shown in a window of a big toy store. Ranged in companies and battalions following one another upon a foot-wide strip of glass raised above the floor of the window and extending along close to the window in front, and along the entire width of it, was a long column of toy soldiers, marching, or seeming to march, the figures being all in marching attitudes. At the side of the window was a mirror standing vertically, but running back from the front at an angle slightly acute. Seen from the sidewalk and at a little distance from the window the reflection in the mirror of the marching column of soldiers had the appearance of a continuation of it, the column turning at the mirror, at a slight angle from the course of its march along the glass, the effect being produced by the angle at which the mirror was set.—*New York Sun.*

Hints for Prevention of Fires in Dwelling Houses.

The fire marshal of Maryland, in his annual report for the year 1898, gives the following sensible hints for prevention of fires:

Be satisfied that water is passing freely through all pipes in the kitchen before kindling the fire in the range.

Build no hearth fires before assuring yourself of the insulation of hearths from rafters or other woodwork.

Watch carefully the joints in furnace flues, and protect all woodwork in the cellar from furnace heat.

Pass no stovepipe through partitions or ceilings without having a non-conductor of heat round it.

Clean chimneys and flues once a year wherever wood is burned in hearths or stoves.

Keep matches in a metal case and out of reach of children.

Never replenish a lamp or oil stove while it is burning.

Do not hang curtains or other drapery near gas jets.

Never use kerosene in kindling fires in stoves.

Do not use sawdust in spittoons.

Avoid carrying a lighted lamp.

During nine months of this year 2700 miles of new railroad were laid in this country.—*Ex.*

The Post Office building in Virginia, San Diego County, Cal., is made of an old piano box.—*Ex.*

REVIEW OF THE MARKETS.

Demand continues excellent, the retail trade feeling the full influence of the holiday expenditure. The jobbers are kept fairly busy supplying unexpected depletion of specialties suitable for holiday requirements. Inventories in many trade centers are occupying the services of part of the force, while travelers are at home assisting in the general daily sales. The colder weather conditions stimulate generally the sales of many seasonable goods that have been holding back for freezing weather. This is likely to prevail now until after Christmas, for which a special gratitude will be felt. Few changes in prices of any moment are now taking place. No doubt the first fortnight in January will be enlivened by their arrival.

Wire Nails: No changes in prices have taken place on this staple commodity since the date of our previous issue. The demand is quite moderate, and only orders for ordinary requirements are noted. The present quotations are named as follows, f.o.b. Pittsburgh, terms 30 days net:

To jobbers in carload lots.....	\$2.95
To " in less than carload lots.....	2.97½
To retailers in carload lots.....	3.10
To " in less than carload lots.....	3.20

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock.....	\$3.25
" less than carloads on dock.....	\$3.40
Small lots from store.....	\$3.40 to 3.50

Cut Nails: With frequent orders for moderate quantities, the tone of the market on Cut Nails is unchanged, and is not noted for increasing strength. The following quotations represent nominally the present state of the market, and are f.o.b. Pittsburgh, the freight being added to make a net price delivered at destination:

To jobbers in carload lots.....	\$2.60
To " in less than carload lots.....	2.65
To retailers in carload lots.....	2.70
To " in less than carload lots.....	2.85

New York business continues quite light with prices nominally as follows:

Carload lots on dock.....	\$2.75
Small lots from store.....	\$2.90

Barbed Wire: Quotations remain unchanged for Barbed Wire, few orders, except for ordinary requirements, being the feature. No change in quotations having been made, the regular quotations remain as follows, f. o. b., Pittsburgh, net cash, thirty days:

To jobbers in carload lots, Painted.....	\$3.40
" Galvanized.....	3.55
" in less than carload lots, Painted.....	3.42½
" Galvanized.....	3.57½
To retailers in carload lots, Painted.....	3.55
" Galvanized.....	3.70
" in less than carload lots, Painted.....	3.65
" Galvanized.....	3.80

Smooth Wire: The demand for Smooth Wire continues good; the market, which is well sustained, may be considered firm at former quotations, which are as follows, f.o.b. Pittsburgh, terms thirty days, net cash:

To jobbers in carload lots.....	\$2.80
" in less than carload lots.....	2.82½
To retailers in carload lots.....	2.95
" in less than carload lots.....	3.05

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

Bissell Carpet Sweeper Co., Grand Rapids and New York, report doing a large business for the holiday trade, in the Toy Carpet Sweeper manufactured by them and sold at prices varying from \$1.50 to \$6 per dozen. Their "Misses" Sweeper at \$9 per dozen, which is intermediate in size between the largest toy sweeper and the regular domestic size Bissell, is also meeting a popular demand for a swift seller.

Peck, Stow & Wilcox Co.: Under date December 1st, Peck, Stow & Wilcox Co., New York and Southington, Conn., lead the procession in making 1900 prices by issuing a revised discount sheet, No. 4, to apply to their 1898 catalogue. A number of changes have taken place in the conditions of the market since their last discount sheet was issued and

this has made necessary a revision of quotations to bring their prices up to date.

Cordage: Advanced quotations still control the market, demand being nominal. Quotations for carload lots are as follows, with an advance of a quarter of a cent for less quantities, f. o. b., New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....per pound,	15½ cents.
" ¾ inch.....	16 "
" ½ and 5-16 inch.....	16½ "
Sisal, 7-16 inch and larger.....	10½ "
" ¾ inch.....	11 "
" ½ and 5-16 inch.....	11½ "
" Lath Yarn.....	10 "

Manila Tarred Rope, 15-thread, 14 cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7 cents, "C" grade 6½ cents. Jute Wool Twine, 4 ply only, per pound, 6¾ cents; all other sizes, 7 cents.

Linseed Oil: Dean Linseed Oil Co., under date of December 5th, quote as follows:

In lots of less than 5 barrels.....	51 cents per gallon.
In lots of 5 barrels or more.....	50 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

THE PORTLAND TRADE.

Owing to the continued warm weather, many articles that usually sell very fast at this season, are going slowly. To make business what it should be, under the existing conditions, we ought to have at least a foot of snow and colder weather. Business is holding up remarkably well, when the conditions are taken into consideration. Prices are well maintained and collections are good.

The conservative buyer finds it very difficult to know just what to do for Spring trade. If he under-orders, he feels very sure that he cannot size up his stock when it gets broken. If he orders too heavily, he is taking quite a chance on conditions that may prevail in 1901. The middle course seems to be the correct one, placing orders early for early delivery, and in quantities that we feel sure will be cleaned up.

The market looks as strong as it has in the past, and there is no indication of any considerable weakening in the steel market. Very conservative manufacturers have given orders for their entire wants for the first half of 1900, and we do not look for any declines of any consequence; in fact we feel when the turn comes and prices recede, it will be so gradual that jobber and retailer will both be enabled to handle their stocks without serious loss. It seems to us the part of wisdom for retailers to order somewhat in advance of the season, that they may be sure to have their stock on hand when the goods are called for. We think it will be very hard to get orders filled for the Spring of 1900, and the dealer that has the goods on hand will have a very great advantage.

EMERY-WATERHOUSE CO.

THE PITTSBURGH TRADE.

November was a very satisfactory month in amount of sales, and would have been still larger if weather conditions had been more favorable. December opens with colder weather, so that season goods will now move faster.

Old contracts are being rapidly closed out as the end of the year approaches, and all will soon have to buy on the present basis of values. This will cause light purchases for the time, but if sellers have the back-bone to hold for the legitimate demand, it is sure to come.

The new price fixed for ore in 1900 makes a \$15 cost for pig iron, and the demand for next year does not yet seem to be met, so that there is not much probability of lower prices during next year.

As Hardware of the heavier grades is based on the price of pig iron, we can therefore look for a steady market in those goods which have not been advanced beyond reasonable limits.

It is reported that the Carnegie company have taken an option on 400 acres in the Monongahela Valley for extensions to their plant. This wonderful valley is fast becoming

ing one continuous workshop for thirty miles above Pittsburgh.

The holiday season is making itself felt in the stores more directly interested, and no doubt the Hardware trade will have a good share of it this year.

LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

The evil of extreme competition which tends to make business a war, made organization of the National Hardware Association a necessity, and the abundant evidence that selfishness and egotism have been modified through its influence is good reason for its existence. That the business of the country has been greatly improved ethically and morally through its influence, no one familiar with it can doubt. Unpleasant conditions and unfriendly relations between manufacturers and distributors have been removed, and a feeling of brotherhood increased.

This is the kind of socialism that will ameliorate the strained relations between the forces upon which prosperity depends.

Improvement in the morale of such an important line of business covering the entire country is a fact for congratulation. That the organization of the retail association, for which *Hardware* has so efficiently labored, will have the same influence, we can be assured.

When organizations to improve business relations supplement the Church in inculcating morality it is a good omen. Competition uncontrolled by morality is vicious and irreligious, as it interferes with the prosperity, peace and welfare of some people. It may not be more easy for a camel to enter the eye of a needle, but it will be easier for a rich Hardware man to enter the heavenly state when the devil is denied a voice in managing business affairs.

Shortage in raw material continues and many buildings are being delayed in this city for the lack of steel. Diminished demand will be the only relief which the extreme price is likely soon to produce. It will be a great relief to jobbers if January shall find the orders entered in the early part of the year completed, so that they can supply their customers goods which they contracted for delivery this year.

Anti-expansion and imperialism that had been chosen as an issue for the next Presidential campaign may not be used. The writer had predicted such an issue would be fatal to the party adopting it, but as the gods are said to first make mad those they would destroy, and the indications of madness had been so manifest by one of the national parties, that there was reason to suppose it might continue.

McKinleyism seems to have acted as an antidote on grumblers and cranks. Scarcity of money, overproduction and hard times having disappeared, an issue was greatly in demand, and imperialism seemed to be the last ditch. It seems a pity to destroy this by the collapse of the rebellion, as the country might have been better served by furnishing rope for the suicide. However, as Croker and Hill are said to have endorsed the Chicago platform, this may serve the purpose.

The people of this country, if they are sane, will continue to judge the party by its fruits, and our unexampled prosperity will not be destroyed by the votes of its benefactors.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE COLUMBUS TRADE.

We had our first genuine snow storm of the season on December 3d. Snow fell all day long but melted as fast as it fell. It was a very great change from Thanksgiving Day, as the writer took a drive through the country and saw children running around out-of-doors in their bare feet who seemed happy and comfortable. The day was more like an April day than the last of November.

I wonder if the Hardware dealers in other cities are as

friendly with each other as they are in Columbus. Your readers no doubt know that we have a local Association in Columbus, and we may safely say that it is an organization for profit and pleasure. We have had a number of impromptu banquets which were very enjoyable. The last one was a Quail supper given on the 29th ult. The quail were furnished by the mighty hunters of the Hardware Association and they furnished enough and to spare. In fact, we had quail "to eat." Mr. Harris of J. S. Abbott & Co., acted as toastmaster and called on a great many to display their oratory. We have mighty hunters and mighty eaters, but mighty orators in the Columbus Hardware Association have not yet been born; or if they have, they are hiding their talents under a *half bushel*. But we had a jolly good time just the same and all felt that it was one more link in the chain of friendship that binds Columbus Hardware dealers together.

Trade is all and more than we could ask for at this time of the year. In fact there is no perceptible falling off in the volume of business. Retail dealers who have spare money are buying anything that is offered at a low price and having it shipped at once for Spring trade. They say: "Goods will not be any lower and we are sure to have them when we need them." We think they are perfectly safe in buying any line for early Spring business at prices ruling now. We also believe that there will be a shortage in many lines early in the season. It looks now very much as though manufacturers who have adopted the arbitrary "30 days net" terms, would return to the established 60 days or 2 per cent. cash 10 days terms, and we sincerely hope this will be the case. The burden as it now stands, is on the Jobbers' shoulders. One of our customers who is considerably behind with his account said he had to give his farmer customers long time and for that reason could not keep his account up where it should be. It did not take long to convince him that he was not carrying the farmers' accounts, but the jobbers who furnished him the goods were the ones who bore the burden. A great many retailers think they must give their farmer customers long time in order to hold their trade. This is their option providing they have sufficient capital to do a credit business and pay their bills when due; but they should not sell other people's goods on credit. It is invariably the case that when a dealer fails, his shortage is on his books; mostly in bad accounts and he owes a corresponding amount to the parties who furnished him goods. In other words, he sold other people's goods on credit and could not possibly pay for them unless he collected the amount from his customers. It is a well known fact that a great per cent. of merchants in all lines of merchandise are doing business largely on the jobber's capital. We maintain that where in many cases it amounts to consigning goods to merchants, who are honest but with small capital, they should sell only for cash. Their customers know their circumstances and would take no offence if the merchant told them they could not give credit, as they must pay for the goods promptly and their own capital was not sufficient to justify them in doing a credit business. We believe that consumers would be more likely to patronize a merchant who took such a stand and would willingly pay cash. Retailers could come much nearer doing a cash business if they made the effort. It is done by all large city retail houses—why not by merchants in smaller towns. The merchant who does a cash business in any town has his share of the trade.

THE SMITH BROS. HARDWARE CO.

THE OMAHA TRADE.

The volume of November business, while exceeding to a very large extent the business of a year ago, was, nevertheless, somewhat below October, owing largely to the fact that on account of the unseasonable weather which prevailed, the demand for season goods was unusually light and sort-up orders somewhat scarce. The weather

has been unusually warm, and for this reason goods ordinarily in large demand at this season of the year have not been moving, but the volume of trade, considering the conditions, has been very satisfactory. Prices, as a rule, are well maintained, collections are above the average, farmers' products are bringing satisfactory prices, money is plentiful and cheap and there seems nothing to prevent the demand for a large amount of season goods as soon as the conditions of the weather will permit of their use.

RECTOR & WILHELMY CO.

THE DAVENPORT TRADE.

The regular quarterly meeting of the Iowa Hardware Jobbers Association will meet at the Hotel Savery, Des Moines, on the 13th inst. at 9 A. M.

The grading of the Davenport, Clinton & Eastern Railroad is finished, most of the rails are laid, and the management promises an excursion from Davenport to Clinton over this new line at an early date.

A new manufacturing concern has started here to make the "Model Window." It is claimed that this window makes the opening perfectly tight, and that the sash will work as freely as in other windows. It is so arranged that you can remove the sash without marring the inside finish. By the use of a metal guide which can be attached to any window, it becomes *dust tight*, cuts off all drafts and prevents the sash from rattling. In addition to other improvements claimed, he has a device for balancing the upper and lower sash with the same set of weights, that is, he uses two weights instead of four for a two-sash window.

Sales for November were more than the corresponding month a year ago and collections are satisfactory.

SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

The passing of November left no weakening trace visible in the robustness of trade activity, and as to the immediate future—the business opening of the New Year—there is good-cheer feeling all around.

President Wakefield Baker of Baker & Hamilton, and Secretary Charles F. Tay, of George H. Tay Co., several weeks ago went to St. Louis as representatives of the Pacific Coast Jobbers and Manufacturers Association; they were present at the hearing before the Interstate Commerce Commission of the complaint of the St. Louis Business Men's League and other Middle West business men, against the various transcontinental railroad lines on the question of the existing freight rates to the Pacific Coast. These delegates have not yet returned home, but their fellow-tradesmen are anxiously awaiting their arrival to laureate them for the good fight they made. The news is that after the Interstate Commerce Commission adjourned to resume the trial at a meeting on the coast next month, these two prominent men in the trade journeyed on East to New York in the interest of their representative commission, and that they will be here in good time, thoroughly well reprimed for effective work at the resumption of the trial expected to reopen soon after the Christmas holidays.

On the first day of this month the H. E. Skinner Co. was incorporated and commenced business as successors to the retail interest of the veteran E. T. Allen Co., dealers in firearms, cutlery, fishing tackle, athletic, outing and sporting goods. Miller, Sloss & Scott purchased the wholesale portion of the retiring company's stock.

H. E. Skinner, of the successor company, has been associated thirteen years with E. T. Allen Co., as head salesman, his associate members of the new corporation being Col. Charles Sonntag, resident coast agent the past eighteen years for the U.S. Cartridge Co.; H. Justins and Leon J. Hazen, young men holding responsible positions for years with the E. T. Allen Co.; and W. A. Linforth, manager the past ten years of the sporting goods department

of the Fresno, California, Hardware house of Kutner, Goldstein & Co.

Just where this successor concern has stepped in to continue the business of the retiring firm—No. 416 Market Street—is where Col. E. T. Allen opened in business twenty-four years ago. It was a quiet, modest beginning, in half of a room one flight up. After a couple of years there was a business expansion taking in all of the second floor. A couple of more years and he moved down stairs to the store opening on the street, where he had two fine show-windows that have always been kept artistically trimmed. One year later Colonel Allen had the basement added to his rental accounts. A couple more years the second floor was again taken possession of as an addition to the business area of the E. T. Allen Co., and a couple of years later found him in possession of the whole thing—the entire three floors and basement, when of late years his annual business footing has averaged upward of the quarter-million-dollar-mark.

TRADES PRESS ASSOCIATION.

THE BALTIMORE TRADE.

We report continued activity in sales and the present cold wave has encouraged our customers to include skates among other items they are now ordering.

The variety and quantity of goods moving at this time is exceptional as nearly all lines we carry seem to attract attention and get into distribution.

Stove pipe, freezers, fly paper and skates are a funny combination to travel together in December, but everything goes at present.

Inventory will engage our attention in about two weeks and a dusty time we'll experience until its completion.

Collections are a little stiff, affected possibly by the weather, but we are raking the weeds from around the flowers and hope to cultivate a healthy lot of ledger accounts for the coming year.

Our bookkeeper lies awake at night thinking of such catchy phrases to use in his letters to the delinquent debtor, as will cause him to leave home and wife long enough to borrow from a neighbor the necessary amount to settle up.

H. W. WEBB & SONS.

THE PHILADELPHIA TRADE.

The end of the year is now near and jobbers' thoughts turn more towards stock taking than business, although it is always gratifying to wind up a year with an active demand for skates, holiday goods and cutlery. The demand for these lines is, of course, being retarded by the unusually mild weather. At the same time general trade continues fair, while the outlook for the future is bright.

Manufacturers are still reporting advances, and almost every jobbing letter tells of goods which have been marked up in price.

Goshen Sweepers

"SAVE THE CARPET."

They do not get out of order.

They always sweep well.

Absolutely Noiseless.

POINTS OF SUPERIORITY:

Easy Running Qualities.

Beauty of Finish.

Mechanical Perfection.

Our Catalogue and prices will interest you.

EVERY SWEEPER WARRANTED.

The Goshen Sweeper Co.,

GRAND RAPIDS, MICH.

Labor is very generally employed, and at remunerative wages, and, unless all signs fail, there should be a continuance of good trade for some time to come.

As might be expected, the advanced prices are causing a greater demand for money, and it takes considerable more money now to run the Hardware business than it did a year ago, and for this reason prompt collections are now appreciated even more than in the past. A danger in times like the present is that lines of credit may be extended too freely, and while it is true that the general public has not for years been so able to purchase, still it by no means follows that it is a good plan to have credit too widely extended, and it is to be hoped that dealers throughout the country will be conservative in this respect. Squalls come occasionally, and it is well not to be caught with all sails spread.

BIDDLE HARDWARE CO.

A Gettysburg Relic Factory.

According to a Germantown man, who has just returned from Gettysburg, there is hidden away in the woods, a mile or two from the battlefield, a relic factory. It is a two-story building of brick, 80x100 feet; twenty-nine hands are employed in it, and the weekly pay-roll averages \$300. The value of this year's production will not be far from \$20,000, an increase of 40 per cent. over that of last year. The relic factory was only built in 1898.

The production, the Germantown man says, consists of old bullets, soldier buttons, buckles, swords, pieces of bone and sabretasches. These are the cheaper products. There are, besides, in the finer and more costly lines, Testaments bored through by bullets, love letters burnt by powder and stained dark with blood; skulls with big leaden balls lodged neatly in the eye sockets or the jaw, and the full uniforms, properly punctured and blood-stained, of all the officers slain upon the battlefield.

The factory makes nothing in advance, thus avoiding overstocking. It only runs on orders, and by night the customers call for their goods. They are the inn keepers, grocers, the saloon keepers, bakers and real estate men of the town, and whenever it is moonlight they may be seen distributing the rare relics cautiously and judiciously over the field. Visitors there now are more numerous than they used to be. It is no longer usual to poke about all day without unearthing as much as a single bullet, and tourists appreciate this change.—*Grand Rapids, Mich., Press.*

Old Tin Cans.

In the suburbs of great cities an industry has sprung up having for its object the recovery of solder used in making and sealing tin cans, says the *Scientific American*. In consequence the formerly despised and useless tin can has acquired sufficient commercial value to rescue it from the back lot dumping-ground and garbage scow.

Under the present system of street cleaning New York City's refuse is loaded on scows from docks located at convenient intervals along the water front, and then taken to sea and dumped. These docks have double decks, the upper projecting sufficiently to allow the contents of a cart to fall upon the middle of the scow and be distributed by the trimmers, who keep the vessel on an even keel. The trimmers also select everything of value with the greatest care; rags, fat, bone, metal, paper stock, etc., being stored on the lower deck of the dock. The silver and jewelry form no small item of the contractors' profit, and the total value of a scow load is estimated at an average of \$200.

The space between the dock platforms is often closed in with odds and ends, and the interior converted into a miserable habitation by the trimmers, men and women, who thus herd together, their supplies being drawn from the dump.

These dumping docks are the principal source of supply for the industry, and a wagon load of tin cans can be bought at such places for \$4 or \$5.

The furnace is an old soap boiler, into which a few sticks are thrown; the bowl is then filled with cans, a quart of kerosene poured over them and ignited.

The heat developed by the oil is not great enough to attack the tin, but melts the solder, which flows to the bottom of the bowl. The solder recovered from a load of cans averages 40 pounds. After this process is completed the tin plate scrap is sold to make what is called "acid."

Into a large open vat containing waste acid, acid ferric sulphate, sulphuric or hydrochloric acid, the scrap is thrown and allowed to remain until the tin is stripped from the iron underneath; more scrap and metallic iron is added until the solution is neutral. The tin thus dissolved is used as a basis for the preparation of stannates or other tin compounds, and by dyers.

The iron plate is rolled into balls for melting, the ferrous sulphate purified and sold as commercial copperas, and the remaining acid used in repetition of the process.

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. If you shoot a revolver or rifle you will be interested in our latest output, SPORTING RIFLE SMOKELESS. Write for information.

How False Antiques Are Manufactured.

The making of false antiques has become a regular business. Many people who like to have picturesque old furniture and curios around them cannot afford to pay the high rate of prices charged for originals, and they are content to take imitations, which can be had at comparatively little expense. One dealer, who, owing to the difference in price, sells a dozen reproductions to one antique now, says that the business is perfectly legitimate. If the reproduction is made like the original and sold as such no harm is done, and the purchaser gets what he wants at a low price. Reproductions of rare pieces of antique furniture can be honestly made and sold just as copies of favorite oil paintings are reproduced and sold. The dishonesty is when the dealer tries to sell the reproduction as an original. Poplar, bass and white maple are the woods ordinarily used for the manufacture of false antiques; but veneers of these woods are too soft for the completion of certain classes of goods. It is a common practice to make the base or core for the work of some light wood, such as pine, over which is laid a veneer of oak, birch or mahogany, or other hard wood. This gives an article which, while being to all intents and purposes a piece of hardwood furniture, weighs much less than the original, and will not warp or twist. Still another style is made from the waste products of the saw mill. The stuff is reduced to a pulp and pressed into sheets under such an enormous pressure that warping is effectually prevented. From one base may be made all kinds of furniture, mahogany, oak, rosewood, walnut, or even ebony.

A great deal of the "aging" is done in the rear of the dusty, dingy shop in which curios of this class are usually sold. A regular apparatus is employed for the purpose, the object of which is to alternate application of steam and hot air. The sides and back of the apparatus are of brick, the top is of sheet iron and the base of wood. There is a second piece of furniture. Pipes are used to carry steam or hot air, as the case may be, into the chamber. After

the furniture has been steamed for say, twenty minutes, hot air is let in, and this treatment is repeated until the preparation of the wood for sizing, filling or priming is completed. After the article has been removed from the oven it receives its finishing touches. What these are to be depends on circumstances. The metal work is soon tarnished by exposure to dampness, and the woodwork rapidly collects dust.—*St. Louis Globe-Democrat.*

Intellectual Outgivings.

"I have a conundrum for you," said Sam Tribet to Joe. Limeburner.

"Propound it."

"Why are unmarried women always first at church?"

"Give it up."

"Because they want to be there when the huns are given out."

"Now I have one for you?"

"Well?"

"Why do hens lay their eggs in the day-time?"

"I don't know. Why?"

"Because at night they are roosters."

Illustrated Journalism.

The first journal to give illustrations with any frequency was the *Mercurius Civicus*, which came out during the civil war with portraits of Charles I., and his Queen, Cromwell and his officers, and Prince Rupert. More elaborate pictures dealing with the war were, however, left to the pamphlets of the time. The Frost Fair on the Thames, in 1683, was made the subject of an interesting broadside, and so also was the funeral of Queen Mary II., in 1695. With the eighteenth century the art of illustrating actualities grew apace. Caricatures abounded, now of the Jacobites, now of the South Sea Bubble or similar excitements. The *Daily Post*, of 1740, affords an example of a daily paper attempting to illustrate a current event. On March 29th of that year it published a detailed diagram of Admiral Vernon's attack on Porto Bello. The *St. James Chronicle* of 1765, presented its readers with an illustration of a strange wild animal that had excited much attention in France, but this illustration was obviously imaginary. The *Gentleman's Magazine* of 1751 gave a portrait of Edward Bright, a fat man weighing 42½ stone. In the *Town and Country Magazine* for 1773, there were portraits of the heroes and heroines of many a famous scandal, as, for example, of Byron's father and the Countess of Caermarthen, of a certain Lord-Lieutenant of Ireland and "the celebrated Miss P—m." In the *Thespian Magazine* for 1793 I find an illustration of the new theatre at Birmingham. Then there were the *English Magazine*, the *Macaroni Magazine*, the *Monstrous Magazine* and the *Political Magazine*—all containing illustrations on copper, more or less topical, although closing the eighteenth century with but little premonition of what the nineteenth century was to bring forth in the matter of news illustration.—*Contemporary Review*.

The First Pacific Steamship.

The first steamship to sail the Pacific Ocean was the Hudson Bay Co.'s vessel *Beaver*, which, over sixty years ago, left the Thames on a voyage to Astoria, Ore., the fur trading post founded in Oregon by the ancestor of Mr. Astor, the millionaire. She was also the first European steamship to round Cape Horn. The *Beaver* was only 101 feet long by 20 feet beam, and 11½ feet deep, with a tonnage of 109¼ tons. Her two engines were made by Boulton & Watt, of Birmingham, and were of 35 horse power each. The vessel carried miners during the gold fever in 1849, and after serving in various capacities, ran on a rock in Burrard Inlet, and became a wreck in 1888. An attempt was made to transport her to the World's Fair, but finally she was sold and broken up. The brass and copper fittings have been cast into souvenir medals, and the timber made into walking sticks and other mementoes.—*Marine Record*.

Our Commercial Growth in South Africa.

The partial suspension of business activity in South Africa, due to the war, has served to call attention to the rapid growth of American commerce in that part of the world during the past few years, and the popularity of American products and manufactures when brought into competition with those of nations which had been formerly supplying those markets. A recent number of the British and South African *Export Gazette* received by the Treasury Bureau of Statistics contains a series of statements on this subject, and quotes J. Solomon, a Capetown, South Africa, merchant as saying:

"In some respects the British manufacturer is outdoing his American competitor, but I am afraid that in many cases the latter is getting the decided advantage. The former cannot afford to lose this important market, which, in my view, he does not study sufficiently. On the other hand, the American manufacturer goes out of his way to please his clients in order to grasp a probable order. Take boots and shoes for instance. It used to be asserted that American boots would not fit English feet; but American manufacturers now use English lasts. It is the willingness of the Americans to adapt themselves to required styles which has principally gained for them so large a share of the South African trade. Quite a number of Capetown houses now handle American goods. As regards Germany, England cannot touch it in the matter of blankets and chinaware, and in these and some few other classes of goods they are making important inroads into the market."

Discovery in the Tower of London.

It would really seem impossible to make any new discovery in the Tower of London, which has been examined so many times by architects and antiquaries. Some unusually interesting discoveries have just been made in the process of laying the foundation for the erection of a new guard-room near the White Tower. The workmen cut the Roman wall of the second century and found a number of perfectly preserved flue tiles for the diffusion of hot air from the hypocaust. These tiles are excellent specimens, measuring 15 inches in length, 6¼ inches in width and 4¼ inches in depth. According to a cable dispatch to the *New York Sun*, while removing the mud from the subway leading from the river and the moat, the workmen discovered a number of iron and stone shot, left, it is believed, at the time of the conflicts between the royal troops and the rebels under Wyatt, 1554. The shot are thickly set in a conglomerate of mud and gravel, mixed with human bones and bits of armor, showing firing with deadly effect at close quarters.

Ancient Cement.

Samples of cement used in the antique water conduits about Ephesus and Smyrna were recently subjected to chemical analysis, and the results have proved interesting from the archaeological as well as the engineering point of view. While the different samples were from water works that dated from several centuries before Christ to 300 years after, yet it was found that the general composition of all was quite similar. The chief constituent was carbonate of lime, but mixed with it was from two to eight per cent. of organic material. This was ascertained to consist of a mixture of fatty acids, and it is believed that the cement was the kind which Pliny and Vitruvius mention in their works. Experiments were made with a cement consisting of burned lime and olive or linseed oil, but it was not found to be permanent. On the other hand, a mixture of two-thirds air-slaked lime and one-third olive oil hardened readily, and possessed great endurance, leading to the belief that this was the composition of the ancient cements which were analyzed.—*Tradesman*.

THE WORLD'S GREATEST FILE WORKS.

ESTABLISHED 1842.

"By their works ye shall know them."

PLANT OF THE ARCADE
FILE WORKS AT
ANDERSON, IND., U. S. A.

BACK of an Arcade File stands the most complete and modern file manufacturing establishment in the world, directed by master minds, originators of a distinctly improved product sold entirely on its merits, the modern plant insuring best quality. Back of an Arcade File stands this guarantee, "that an Arcade File will cut faster and wear longer than any other file made," and as an "earnest" of this guarantee, the Arcade File Works will send to any responsible Hardware Jobber, Wholesaler or Retailer, one dozen Arcade Files, to become the property of the receiver or returned at our expense if the guarantee is not fully borne out in every particular.

There are new points worth knowing about Files, and the best information is condensed into a neat little pocket volume which we will send free to readers of "Hardware" while they last. Ask for "Practical Talks on File Work," and perhaps you would like to know about prices.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Canal Dover, Ohio.—W. L. Rice.
Copenhagen, N. Y.—Leon J. Fowler has leased the J. D. Paris store building in this village and will soon open a Hardware store and tin shop.
Denton, Md.—Nuttle Hardware Co.
Fenton, Mich.—H. F. Chatfield and F. J. Stocken have formed a co-partnership under the firm name of Chatfield & Stocken, and will open a Hardware store.
Grinnell, Ia.—G. E. Reiss & Co.
Phoenix, N. Y.—The Phoenix Specialty Co., to deal in Hardware. Capital, \$10,000. Directors: Herman D. Merriam, A. Eugene Russ, Fred. A. Carter and George C. Wood, Phoenix; Charles C. Alden, Medford, Mass.
Revere, Mass.—Revere Hardware Co., Hardware business. Capital, \$5,000. Incorporators: W. C. English, R. M. English, Jr., C. F. English.
Rock Hill, S. C.—A Hardware and general merchandise company has been incorporated by T. O. Flowers, J. S. White and John W. O'Neal, with a capital stock of \$20,000.
Roseville, Ill.—Rufus Lance.
Sacramento, Cal.—E. P. Frost Co. To conduct a general Hardware, implement and plumbing business. Place of business, El Paso de Robles. Directors: E. P. Frost, W. F. Brown, F. D. Frost, T. C. Jameson, Paso Robles, and George Uttley, San Francisco. Capital stock, \$20,000; subscribed, \$10,000.
Soldiers Grove, Wis.—George Davidson has opened a Hardware store and tin shop in the basement of the Opera block.
St. Johnsbury, Vt.—George K. Swett, a former partner of C. H. Goss in the Hardware business, will open a Hardware store in the first floor of Music Hall.
Toledo, Ohio.—A new Toledo firm will be known as Shifley & Burdick, and it will handle Hardware in the building just erected by J. J. Swigart, at No. 2011 Adams Street.
Watertown, N. Y.—Hunting-Weekes Co., Hardware business. Capital, \$50,000. Incorporators: S. E. Hunting, J. Weekes, G. L. Hardy, all of Watertown.

Changes and Improvements.
Addison, N. Y.—Henry T. Albee has purchased Mr. Moore's interest in the Hardware firm of Moore & Weatherby.
Bennett, Ia.—J. C. Templeton has added a line of Hardware to his stock.
Decatur, Ind.—The three-story brick Bowers' block, on Monroe Street, occupied by the Hardware firm of J. S. Bowers & Co., will shortly be remodeled and a handsome new plate-glass front put in, taking the place of the brick arches which form the present front to the first floor.
Eveleth, Minn.—E. M. Osborn's Hardware stock has been moved into the building adjoining the Hub on Grand Avenue.
Finley, N. Dak.—Latimer Bros. have been

succeeded in the Hardware business by Latimer & Long.

Gallatin, Tenn.—M. A. Ewing & Co., Hardware, have just completed new Hardware building.

Hastings, Minn.—The Hastings Hardware Co. have been succeeded in business by Johnson & Greiner.

Johnson, Vt.—E. E. Holmes & Co. have put up an addition to their shop and will soon add a stock of Hardware.

Lynchburg, Va.—J. B. Warren will erect a business house on his vacant lot on the south side of Main Street, and will have it ready for occupancy by February 1st. It will be used by Bean & Holt, Hardware dealers.

Manchaug, Mass.—Walter Jones has moved his Hardware stock to East Douglas.

Mansfield, Ill.—The Hardware and furniture firm of Creighton & Leach has changed to Leach & Martin Mr. Martin having bought out Creighton's interest.

Middletown, N. Y.—George W. Galloway has purchased of Leverett C. Hoyt, his interest in the Hardware business in which Mr. Hoyt has been associated for the past twelve years with his son, John H. Galloway, under the firm name of Hoyt & Galloway. Mr. Galloway has taken possession and the new firm will be known as G. W. & J. H. Galloway.

Minneapolis, Minn.—On January 1st, W. K. Morison, the Bridge Square Hardware dealer, will secure possession of the building now occupied by Goodfellow's dry goods store, and will as soon afterwards as the remodeling of the building can be completed, move to that location from his present quarters. The stone front of the building will be torn out, and a glass and iron front put in its place, and the building will be entirely remodelled throughout. A new freight elevator will be built, offices, vaults and other conveniences will be put in and the store will be as nearly as possible a model Hardware store. The first two floors will be reserved for the retail trade. The improvements will cost at least \$13,000.

Omaha, Nebr.—The Lee-Glass-Andreesen Hardware Co. contemplate the erection of a new building at the corner of Ninth and Harney Streets. It will be 132 feet square and five to seven stories high, constructed substantially of brick, stone and steel, with every conceivable modern convenience, such as steam heat, electric light, electric elevators, automatic fire-fighting apparatus and automatic hatchways for stairs and elevators.

Roslindale, Mass.—S. H. Whittemore and L. L. Cardinal, carrying on business as dealers in Hardware at No. 29 Poplar Street, under the name and style of the Roslindale Hardware Co., have dissolved partnership, and the business will in future be carried on by Louis L. Cardinal.

Business Embarrassments.

Glenville, Ohio.—Geo. H. Engelhart has made an involuntary petition in bankruptcy.

Montreal, Can.—Gerrard A. King, doing a small Hardware business under the style of the Montreal Hardware Co., has assigned to Henry McLean.

Weatherford, Okla.—A receiver has been appointed for the Farmers' Hardware & Implement Co.

Fires in Hardware Stores.

Akron, Ohio.—Harter & Milar's Hardware store has been damaged by fire.

Baldwin, Wis.—Settergren & Pittman, Hardware, store damaged by fire at a loss of \$4,000 or \$5,000; partly insured.

Boston, Mass.—The Hardware stock of Albion J. Tuttle, No. 178 Portland Street, has been destroyed by fire.

Boston, Mass.—The Hardware stock of S. H. Davis & Co., No. 31 Sudbury Street, has been destroyed by fire.

Cleveland, Ohio.—Wm. F. Steiger's Hardware store, No. 1058 Lorain Street, has been destroyed by fire. Loss, \$10,000.

Corydon, Ind.—Joseph Bullett's Hardware store been destroyed by fire. Loss, \$6,000.

Lewiston, Idaho.—Nez Perces Implement Co. Loss, \$12,000; insurance, \$2,000.

Little Rock, Ark.—The warehouse of Fones Bros' Hardware Co., has been destroyed by fire. The loss is \$175,000. Insurance, \$125,000.

Luray, Va.—Bauserman & Bauserman, Hardware store, destroyed by fire.

Perrysburg, N. Y.—Henry Warren's Hardware store has been destroyed by fire.

Saranac, Mich.—Benson & Crawford's Hardware store has been destroyed by fire. Loss, \$5,000; insured.

St. Boniface, Man.—Edward Guilbault's Hardware store has been destroyed by fire.

Troy, Kans.—W. J. McClellan's Hardware store has been destroyed by fire.

Yarmouth, N. S.—The Hardware store of William Churchill has been destroyed by fire.

Burglaries in Hardware Stores.

Amsterdam, Mo.—Graham & Sons, \$100.

The

Blount Door Check

is described in a monthly bulletin of good things
issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal
in America with the motto "All the News; Hard-
ware Exclusively."

It is published on the 10th and 25th of each
month, which is as often as any dealer desires to
receive a trade paper which he intends to read.

Has tabulated records of all new firms and com-
panies and their various changes in the manufac-
turing line. All the new stores and business news
among the jobbers and retailers of the country;
with a Bicycle and Sporting Goods Record covering
the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices
Current" in every issue covering 32 columns of its
pages. A careful consideration given to this de-
partment of the paper may save many dollars to its
subscribers.

It offers to the advertisers advantages possessed
by but few of its competitors in its legitimate field.
In addition to foreign circulation, embracing 74
countries besides our own, it reaches within the
limit of the United States every State and Terri-
tory, where trade and traffic have a foothold.

It has just completed its twentieth volume and
is consequently in no experimental stage, waiting
to establish a subscription list.

HARDWARE'S rate card is based on actual value.
It is a paper for the Hardwareman, possessing the
respect of the trade, the confidence of its patrons,
the thanks of its subscribers and the courage of its
convictions.

Warren, Ill.—The Elliott Mfg. Co.; manufacturing anti-rust tinware. Capital, 20,000. Incorporators: J. M. Elliott, J. Wicks, P. W. McKibben, all of Chicago.

Wheeling, W. Va.—National Tin Plate Co.; making and dealing in tin plate under Rogers' patents. Capital \$5,000,000. Incorporators: J. A. Bearer, of Bellefonte; J. C. McDowell, W. E. Tustin, C. A. Dally, A. B. Dally, Jr., all of Pittsburgh, Pa.; W. H. Rogers, N. E. Whittaker, both of Wheeling.

Changes and Improvements.

Chattanooga, Tenn.—The Chattanooga Stove Co. will erect an additional two-story building and put in new machinery at a cost of \$5000, thus increasing its capacity more than double.

Elwood, Ind.—The mammoth tin plate works in this town are being enlarged again. Six mills are being built. When completed 2000 people will be employed.

Greencastle, Pa.—The Crowell Works have been sold to Joseph P. Rahauser, Gideon Rahauser and Jacob Shank, of this place. The new firm will engage extensively in the manufacture of agricultural and other machinery. The works have been idle for several years.

Greenville, Mich.—The Greenville Planter Co. Manufacturers of hand potato planters; will make corn planters as well, and have bought the Princess rink, which will afford more room.

Kraussdale, Pa.—Krauss Bros. have sold their foundry equipments and machinists' tools to the Roberts Machine Co., at Collegeville, and the shops will be closed in the course of a few weeks.

Norristown, Pa.—An addition to the Reading Screw Works, now in course of construction, will, when completed, give work to sixty more hands.

Owosso, Mich.—John Sheldon will build a factory to be used for the manufacture of washing machines.

Springfield, Ohio.—The Whitely Mfg. Co. Knife and bar plant has been purchased by the Foos Gas Engine Co., for about \$28,000.

Recent Fires.

Bloomington, Ind.—Fire destroyed the building owned by Showers Bros. and occupied by the Campbell handle factory. The loss on the building is \$3500; insurance, \$3000. Loss on the factory, \$3700; insurance, \$1000.

Bridgeport, Conn.—Fire has destroyed the Atlas shear factory on North Avenue. Loss about \$10,000; partially insured.

Waukegan, Ill.—The American Steel & Wire Co., plant damaged by fire at a loss of nearly \$400,000.

Wilmington, Del.—The Diamond State Steel Co., rod and rivet mill of the South Side plant, destroyed by fire at a loss of \$50,000; fully covered by insurance.

Miscellaneous.

Charleston, W. Va.—The Jennings handle factory has shipped two big orders, one of a hundred crates of axe handles to Cincinnati, and another to Wheeling. This industry has become one of the most extensive in Charleston.

Painesville, Ohio.—The Willoughby Fork & Implement Co., a new manufacturing concern launched at Willoughby, has elected the following officers: President, C. R. Brown; secretary and treasurer, W. C. Collister; board of directors, E. W. Bond, W. C. Collister, C. R. Brown, Thomas Jopling and Henry Hooper.

NEW YORK.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Albany, N. Y.—The Rochester Optical & Camera Co., of Rochester, N. Y., with a capital stock of \$3,500,000, have filed articles of incorporation. The capital with which the company will begin business is \$2,000,000. The purpose of the corporation is stated to be "manufacturing, selling and dealing in cameras, shutters, lenses and photographic supplies."

Augusta, Me.—The Marlborough Automobile & Carriage Co. has been incorporated by O. P. Walker, F. A. Powers and C. F. Choate; manufacturing and dealing in automobiles. Capital stock, \$100,000.

Camden, N. J.—The Thomson Automobile Co. has been incorporated by Wm. J. Thomson, John K. Knoer and Theodore Leas; manufacture automobiles. Capital stock, \$60,000.

Charleston, W. Va.—The Henry S. Judd Mfg. Co., of Chicago, Ill., has been incorporated under the laws of West Virginia by H. S. Judd, F. F. Judd, H. W. Judd, H. P. Simonton and G. M. Judd; to conduct a bicycle business. Capital stock, \$500,000.

Detroit, Mich.—John L. Poole & Co., bicycles and bicycle sundries, new firm, have commenced business. They have purchased the good will of the Pope Co., together with the fixtures of the store at No. 272 Woodward Avenue, and will continue the business there for some time. The lines to be handled will be Columbias, Hartfords and Stormers.

Farmington, Me.—F. E. McLeary Co. has been incorporated by F. E. McLeary, C. W. McLeary, G. W. Loury and E. E. Richards; manufacture bicycles. Capital stock, \$10,000.

Jersey City, N. J.—The G. & J. Tire Co. has been incorporated by Frederick Stewart, John E. Fryer and Benjamin F. Downer; manufacture bicycle tires, etc. Capital stock, \$1,000,000.

Jersey City, N. J.—The Star Ball Retainer Co. has been incorporated by Wm. B. Greeley, Francis P. McManus, Louis R. Moore, Anthony N. Jesbera and John M. Scobie; manufacture bicycle specialties. Capital stock, \$100,000.

Jersey City, N. J.—The Single Tube Automobile & Bicycle Tire Co. has been incorporated by Theodore A. Dodge, Wm. A. Towner, Camillus G. Kidder, George Pope, George W. Young, L. K. McClymonds, E. Mora Davison and others; to manufacture bicycle tires, etc. Capital stock, \$1,000,000.

Jersey City, N. J.—The United States Automotor Co. has been incorporated by Charles O. Troll, Louis J. Frey and Frederick W. Hotchkiss; to manufacture automobiles. Capital stock, \$1,000,000.

Los Angeles, Cal.—The Automobile Co. has been incorporated by I. B. Dockweiler, C. Johnson, H. E. Carter, R. D. Morris and

D. H. Laubersheimer; manufacture vehicles. Capital stock, \$50,000.

Marshfield, Ore.—Murphy & Kruse, sporting goods, Hardware, etc., have opened a new store.

Newark, N. J.—The Messerer Automobile Co. has been incorporated by Stephen Messerer, Adolph Goldfinger, Joseph Fisch and Julius E. Seitz; manufacture motors, automobiles, etc. Capital stock, \$300,000.

New York, N. Y.—The International Automobile & Vehicle Tire Co. and the New England Rubber Wheel Co., of Boston, have consolidated. By the terms of the consolidation the first named company is said to have acquired the business of the Rubber Tire Co., including a number of valuable patents. The amount involved in the transaction is placed at about \$1,000,000.

Portland, Me.—The Colonial Automobile Co. has been incorporated by G. A. Marsh, G. A. Dew and A. W. Kent; manufacturing automobiles, etc. Capital stock \$500,000.

Portland, Me.—American Power Carriage Co.; manufacture power carriages. Capital, \$1,000,000. Incorporators: W. F. Hight, S. M. Nichols, G. E. Gray, all of Boston; R. H. Schacht, of Brookline, Mass.; F. L. Fritchey, of Columbus, Ohio.

Racine, Wis.—The Wisconsin Wheel Works has been organized with W. F. Lewis, president; C. D. Sinclair, vice-president; Henry J. Van Arsdale, secretary; W. M. Lewis, treasurer. Capital, \$150,000. The company has bought out the Beebe Mfg. Co. and will manufacture bicycles.

Saco, Me.—The European Automobile Co.; manufacturing advertising vehicles. Capital, \$50,000. Incorporators: G. M. Kimball, of Concord, N. H.; S. H. Ayer, C. E. Allen, both of Boston; F. C. Marston, of Chelsea; W. C. Keith, of Brockton, Mass.

St. Louis, Mo.—Louis E. Hirsch, for eight years with A. S. Aloe & Co., has gone into business for himself at No. 206 North Sixth Street, between Pine and Olive Streets.

Toronto, Ont.—The National Cycle & Automobile Co. has been organized with Fred. S. Evans, president and managing director; A. A. Pope and A. G. Spalding, vice-presidents; H. L. Garford, E. C. Stearns, Lemuel H. Foster, T. P. Coffee and A. R. Creelman; to control in Canada the business and patents of the American Bicycle Co. They will build a large bicycle factory at this place.

Trenton, N. J.—The Enterprise Chain Co. has been incorporated by Wm. M. Morgan, Riley Morgan, Lilly B. Morgan and Thomas Horton; manufacture chains. Capital stock, \$10,000.

Trenton, N. J.—The Howard Automobile Co. has been incorporated by Wm. L. Howard, Frank W. Muschert, Frank H. Williams and George B. Yard; manufacture automobiles, etc. Capital stock, \$200,000.

Changes and Improvements.

Abbeville, S. C.—The Thomson Cycle Co. will increase their capital stock from \$15,000 to \$50,000.

Attleboro, Mass.—The Frank Mossberg Co., manufacturers of bicycle bells, metal specialties, etc., now occupy their new factory. The new building is three stories high, and has 23,000 feet of floor space. This company now has the exclusive agency for the sale of the Mossberg wrench, and the business is under the management of Frank Mossberg.

Chicago, Ill.—A. G. Spalding & Co., sporting goods, contemplate establishing a large plant at West Harvey, for all their sporting goods factories.

Lebanon, Pa.—Jonas W. Knoll is building an addition to his bicycle factory.

New York, N. Y.—C. B. Barker & Co., bicycle sundries, etc., Nos. 70-74 West Houston Street, will move to No. 93 Reade Street about the first of January.

Pittsburgh, Pa.—The Atlantic Tube Co. of Pittsburgh, which was incorporated last April, has filed an application at Trenton, N. J., for an increase of its authorized capital stock to \$750,000. The company was chartered with a capital stock of \$250,000, and it is stated that the increase is to be used for additional buildings and equipment.

Reading, Pa.—E. P. DeHart has moved his bicycle repair shop from Fifth and Bingham to No. 448 Bingham.

Springfield, Mass.—The Warwick Cycle Mfg. Co.'s plant has been sold to D. B. Weston for \$45,000.

St. Augustine, Fla.—The St. Augustine Cycle Co., George W. Ellis has purchased the entire stock and fixtures, and will in future conduct the business.

Toledo, Ohio.—The Viking bicycle factory which was recently shut down with a number of others, is now being fitted out with machinery for the manufacture of naphtha launches. It is stated that this new industry will give employment to at least 300 men, the majority of whom were bicycle workers. The Loziers, who are behind the industry here, purpose investing in the neighborhood of \$250,000 in the plant.

Recent Embarrassments.

York, Pa.—The Keystone Wheel Works filed petition in bankruptcy. Lewis D. Sell has been appointed trustee.

Recent Fires.

Chicopee Falls, Mass.—The Overman Wheel Co. has suffered from fire. Loss, \$1000.

New Britain, Conn.—E. S. Pillard's bicycle store has been damaged by fire. Loss, \$100.

Washington, D. C.—P. M. Corr, bicycles and bicycle supplies, slightly damaged by fire.

Westfield, N. J.—W. P. Scrivell's bicycle store has been burned.

CARY'S PATENT
HINGE
AND
HASP

Designed Especially for
Fruit Crates, Milk,
Egg, Cracker and
other styles of
Boxes, requiring a
hinged cover.

CARY MFG. CO.,
19-21 Roosevelt St.,
NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"SHOULD MISS IT VERY MUCH."

Morley Bros., Saginaw, Mich. [*General Hardware*]: We receive HARDWARE every issue, and find it of such interest as to oblige us to look through its pages quite carefully, and note with considerable interest the items you publish. It is quite an aid to the writer in his branch of the business, and we wish to say, that we should miss your paper very much indeed, if we did not receive it.

W. L. Sandford.

Can You Afford— to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish. Paste, Cake or Liquid. If you are doing business for a profit it will pay you to handle our whole line.

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. Size of page, 4 x 7 inches.

FOUR EDITIONS:

A, 200 pages, - - \$1.00 A 2, 400 pages, - - \$1.50
A F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. Page, 4 x 7 inches.

FOUR EDITIONS:

B, 200 pages, - - \$1.00 B 2, 400 pages, - - \$1.50
B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. Page, 4 1/4 x 7 3/4 inches.

FOUR EDITIONS:

C, 200 pages, - - \$1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - 1.50
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. Page, 5 1/4 x 8 inches.

FOUR EDITIONS:

D, 200 pages, - - \$2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - 3.00
D F 2, 400 pages with flap, 3.50

Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CH For Iron, turn to IRO
" Parers, Apple " PA " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

To the Trade.

We began to sell our new, patent "Four Hundred" line of table cutlery nearly one year ago. As soon as these goods were shown, their beautiful appearance and the substantial manner of their manufacture attracted the attention of some of the large trade, and from that day to this we have been unable to fill our orders promptly. We now understand something of the magnitude of this special line, and have prepared for an enormous sale, and respectfully invite the commands of the trade. Nothing so beautiful, so substantial and practical has ever before been offered to the public.

GREAT SANITARY STOVES. ALUMINUM OIL HEATERS.

Read what WILLARD H. MORSE, M.D., F. B. S. Sc., has to say about them:

WESTFIELD, N. J., Sept. 5, 1896.

I extend my hearty commendation of the Aluminum Oil Heaters manufactured by the Novelty Mfg. Co., of Jackson, Mich. I consider them to be sanitary stoves—in other words, perfect stoves. A sanitary stove is one that warms a room healthfully, perfectly, scientifically. That is what these heaters do. That is what an ordinary oil stove does not do. I sleep in a room warmed by one. I would not sleep in a room warmed by an ordinary oil stove.

The stove itself is well made. Its structure is of the best steel plate, not cast iron. The ornamentation is of aluminum plates—durable, untarnishable, things of beauty.

As to what it does:—It burns without smoke or odor; it heats the largest possible area. In the interest of health we want perfect stoves—that is rooms heated perfectly and healthfully. The Aluminum does that. I know of no higher praise.

W. H. MORSE.

Among the physicians of the present day there are none more eminent as expert therapist and consulting chemist than Willard H. Morse, M. D., F. B. S. Sc., of Westfield, N. J., author of the medical text book, "New Therapeutical Agents."

HARDWARE

On page 46 will be noticed a want ad. headed "Position Open for a Young Married Man." This emanates from a large manufacturing company of established reputation, and the right party could form a connection that would prove a permanently pleasant one.

J. S. Kenyon, engaged as manufacturers' and jobbers' commission agent in Hardware and builders' supplies, Providence, R. I., requests us to state that he would be pleased to hear from manufacturers and jobbers in regard to handling their lines in Providence and vicinity.

The Norton Emery Wheel Co., Worcester, Mass., have found such an increased demand for their goods, they have been compelled to make extensive additions to their already large plant, so they will be fully prepared for all the business that may come their way in a very short time.

The Turner Specialty Co., now at No. 146 Franklin Street, Boston, Mass., are anticipating being settled in their new home at Nos. 64 and 66 Pearl Street, by the first of the year. As the change will provide them with double the area of floor space, they will be infinitely better prepared to do justice to their largely increasing volume of business.

There will be no meeting in January of the New England Hardware Dealers' Association; the annual election will take place as usual in February. President Parlin has appointed the following committee which will nominate officers for the coming year, with the exception of president: Samuel H. Thompson, Hiram G. Janvrin and Anthony S. Morss.

A. O. Norton, Boston, Mass., the well-known manufacturer of special lifting jacks, has recently purchased and completed the equipment of a large plant in the Province of Quebec, Canada. Mr. Norton by this purchase acquires a very fine water privilege, and the new plant will enable him to handle his extensive Canadian trade in a much more satisfactory manner.

Sickels, Preston & Nutting Co., Davenport, Iowa, issue to their customers as a Christmas greeting, a highly artistic and ambitious series of "Six Art Studies in copper etchings from recent paintings." These are all shown in their natural colors, and are each of them worthy of being framed appropriately, being of a more attractive character than similar souvenirs are wont to be.

E. M. Penick, formerly of R. A. Penick & Son, South Boston, Va., expects to engage in the Hardware and agricultural implement business at that place about February 1, 1900. He expresses a desire to have all the necessary catalogues forwarded him from the manufacturers, as well as current quotations covering the same, all of which should be addressed to the Halifax Hardware Co., South Boston, Va. We wish Mr. Penick every success in his new venture, and trust that he will start well equipped with information called for in the above notice.

The Peters Cartridge Co., Cincinnati, Ohio, and No. 80 Chambers Street, New York, are distributing their Annual souvenir calendar, which is an extremely attractive one, in

fine art illustration. The central figure is a mounted Rough Rider who has just brought down a deer by the aid of his trusty rifle, loaded with a Peters cartridge, of course. Surrounding the central object are several vignettes, illustrating hunting conditions in Cuba and the Philippines, Porto Rico, Hawaii, etc.; the rifle ranges also not being forgotten among the uses to which the products of this company are variously applied. "Ammunition for our world-wide possessions," is the keynote of the artistic grouping.

James P. Kenworthy, we beg his pardon, "Jim" Kenworthy, as all his friends for years have called him, is back again in his old haunts; he couldn't stay out of the Hardware business any longer. He has associated himself with George B. Curtiss, No. 95 Chambers Street, New York, and hopes to be the means of re-establishing himself with his old friends in the sale of specialties, in which department of the Hardware business he was at one time a well-known factor, in the present connection he represents Hubbard & Co., A. H. & J. S. Deuse, Connecticut Tool Co., W. C. Bailey and the New Britain Brass Co., a full line of whose salable specialties he will endeavor to interest them in the purchase thereof. We wish him every success for the sake of old times.

Hobart B. Ives, who is known and noted throughout the Hardware trade of the United States as being one of the ablest and most energetic manufacturers of Hardware specialties in New Haven, it seems is not satisfied to let well enough alone, but intends to largely increase his facilities for the future. He has recently purchased the five-story factory on Artizan Street in that city, formerly occupied by the American Fish Hook Co. Mr. Ives takes this entire factory and will utilize it for the future in his already extensive business, which is one of the most prosperous manufacturing enterprises in the city of New Haven. It is especially well arranged for the purposes designed by Mr. Ives, and as he will not take possession until April 1st, he will be prepared to fit it up throughout with all the labor-saving appliances that he can utilize in the manufacture of his important specialties.

A German manufacturer, who recently visited Pittsburgh, was greatly surprised in the difference in the welcome he received eight years ago and at the present time. At the former period the manufacturers entertained the foreign visitors lavishly and showed them all the wonders of natural gas and the resources of their plants. All this is now changed. He requested permission to inspect certain mills and see the improved machinery and methods in vogue. He was surprised to find that it was impossible to obtain the required permit. Other foreigners have succeeded in entering some of the mills, but the manufacturers are becoming more and more chary in granting facilities for the inspection of their plants. There was a time, and it was not so long ago, when foreigners did not care to enter the mills; but at the present time they are very anxious to do so. It should be remembered that abroad in very few cases are foreigners ever allowed to inspect plants, and there is no reason why we should grant favors which we cannot receive in return.

HARDWARE

VOL. XX

DECEMBER 25, 1899.

NO. 6.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the **HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.**

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	-	-	President.
E. N. ROOT,	-	-	Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The year closes, as far as business is concerned, in a blaze of glory. Every jobber handling Hardware to any extent; every manufacturer giving his entire attention to the manufacturing of an important line; every retailer throughout the country with any kind of a stock whatever, are all experiencing the same feeling, and upon the summing up the year's business, there is not the slightest doubt but a margin of profit will be perceptibly in evidence, and the results of the year be of a substantial character.

Most of the manufacturers will commence the season of 1900 with order-books in a very satisfactory condition as to the future; leading customers will be found to have ordered early in order to avoid the fear which was only too prevalent last Spring that the supplies would not be forthcoming on desirable dates. The Spring trade was greatly hampered by the inability of jobbers to obtain goods already ordered of manufacturers, and it was more difficult to obtain additional supplies where the first orders were not generous enough to cover the entire wants of the season. It is believed that this will be attended to more carefully in the season now approaching. Fewer orders will be taken by manufacturers without some positive knowledge on their part of their ability to fill them.

The reports from the trade centres of the country indicate that prices are well sustained, and that business is of a very satisfactory kind, largely in excess of any December trade they have had within a decade. The holiday trade, owing to the increase in the amount of money to be distributed, has been unusually gratifying in every section. A number of building enterprises that have been in contemplation have been halted by the great advance in structural material, but it is believed this will be only temporary in its nature. As soon as it is realized that prices are made that will be held for the year 1900 without fear of any wide fluctuation, some projects will be pushed forward to completion, especially so far as the demand is concerned for the erection of just such facilities for the transaction of business that in every direction is of a very profitable character.

The extreme mild weather which we have experienced of late has not had the stimulating effect upon the sale of such cold-weather specialties as most retailers have stocked up with. The jobbers have already marketed these goods, and the retailers are provided with them in ample time to sell a generous portion of such goods

as skates, sleds, snow shovels, sidewalk cleaners, etc., previous to Christmas, but the absence of ice-making weather will find some of these goods carried over until after January first, when let us hope that a regular, steady trade will make it unnecessary to carry them in stock for another year, which has been done before, however, within the recollection of some of the older dealers.

While the metal markets hold up in the manner in which they do, there need be very little fear of a slump in prices that would seriously affect any branch of the business. It is a well-known fact that pig-iron products and the lower grades of steel have been largely ordered, as far as future supply is concerned, for the first six months of the year 1900, some lines of raw material being secured several months beyond this date. But indications point to the fact that largely increased facilities may be looked for in the production of metal through the fact that new blast furnaces of increasing output and new steel plants already in contemplation, in some cases under way, will, in another six or eight months bring us fully abreast of all possible demands that appear within reach to-day.

Incidental to all this, as is evident the past week or so, there will be an occasional flurry in the speculative centers of the country, which close observers will discover arises from too large a speculation in those industrial bonus stocks that have not been on the market long enough to possess an ascertainable value. In the large number of the many millions of capitalization in the wide-reaching trusts and colossal enterprises recently established, no opportunity has yet been given to make the common stock distributed in the formation of most of them as a bonus to the subscriber to preferred stock, possess any recognized value that would justify the extravagant loans which no doubt were at the bottom of the financial flurry. The fear of loss underlying the handling of these stocks of industrials is the one thing that possesses all holders, for the moment any stringency takes place in the money market, they are only too glad to stand from under, and a terrible effort is made to unload and suffer as little loss as possible, but always with a feeling that there must be some loss in a speculation in which rapidly fluctuating stocks are represented. It is usually considered only a question of when the speculator gets in and how; whether on the ground floor or on the top edge, as to whether he can stand the strain or not, and retire without loss that may be felt and result disastrously.

By the time the next issue of *Hardware* comes from the press we shall have started on the last year of the century. May it prove to be a profitable one, with a good, steady, reliable business noticeable throughout, with no such extreme fluctuations as we have had to contend with during the past year, but a legitimate, regular, steady business, well protected on all hands from unsettled fluctuations, and with a certainty of business being done on successful lines, in which a fair profit will be found to be the corner-stone.

Keeping Tab on Hardware Exports.

In order to keep up the present satisfactory conditions underlying our home markets, it will surely be necessary for the export trade to retain its present strength. It will also be essential that the manufacturers lose no opportunity whatever to increase this

foreign outlet by carefully cultivating in addition the markets not yet occupied by our products, by sending intelligent representatives abroad who are fully conversant with the merits of our goods, and up to date in regard to competing prices, in order that they may secure markets favorable to the introduction of our popular specialties, and obtain the good will of such other countries as are willing to undertake the distribution of American goods. We have the ear of the buying world to day. There is scarcely a port in the commercial world intelligently provided with the means of being informed as to our industrial superiority, but knows and believes America can provide them with every possible want that they are at present securing from other countries, and they believe this with a knowledge back of it of our ability to meet every possible requirement given by any other country.

It is a well-known fact that in the cultivation of the export trade fluctuating prices ring the death knell on any foreign distribution. The conditions of selling are vastly different between home and abroad. The home buyer likes a price that is advanced after his order is securely booked. The foreign buyer builds and establishes a demand based on prices that once settled he is willing should endure for a decade, avoiding the necessity for a constantly changing quotation that unsettles the favorable conditions under which he does business without establishing any that are more permanent.

While we are not yet possessed of the ability to give unlimited credits, with the large increase of our money supply which has been made evident of late, we are rapidly approaching the time when even this, the sole remaining temptation to stay by markets inferior in every other respect to our own, will be removed, and with an intelligent representation in each of the countries for the industrial control of which we are ambitious, we will yet be found firmly fixed, with no fear of being displaced by any possible competition with other industrial centres of the world.

The Pacific Retail Hardware Association.

The second annual meeting of the Pacific Retail Hardware Association will take place on January 17th next at Chico, Butte County, Cal. The convention will be in session at least two days. It is intended that the first day shall be devoted to the president's address, which will be read to the members present, followed by the reports of the secretary, treasurer and the various standing committees, succeeding which it is intended that a general discussion shall take place by the members of the Association, on the various topics of interest that have been brought before them since the last convention. The programme laid out for the second day includes an invitation which will be extended to the wholesale trade, delegates from which it is hoped will be present, and participate in the discussion of topics of mutual interest to the wholesale and retail trade and their harmonious relations to each other. It is anticipated that no less than one hundred members will be present, and it is hoped that the convention will prove of more than the usual importance, and that results will be equally satisfactory. The members at Chico have a reputation for hospitality which it is their intention shall be well sustained on this occasion. The secretary of the Association is J. M. Berry, and his address is No. 1610 Fulton Street, San Francisco.

One-third of the land surface of the earth is covered with forests.

Death of Malcolm Graham.

Malcolm Graham, of the firm of Hartley & Graham, New York, died December 18th at his country residence near Seabright, N. J. Mr. Graham became ill with typhoid fever early in September as he was preparing to leave Seabright for his city home, and his condition was such that the family did not return as usual to the city, being compelled to prolong their stay on account of his serious illness. The improvement during the last few weeks seemed to indicate that he would recover, but he never rallied from the exhausting effects of the fever which finally terminated in his death from this cause.

Mr. Graham was born in this city in 1832. His father was at one time postmaster of the city of New York, and was in his day a prominent lawyer. Malcolm Graham began his business career in the position of a clerk with Smith, Young & Co. About 1853 he joined Marcellus Hartley and G. R. Schuyler in forming the firm of Schuyler, Hartley & Graham, dealers in guns and ammunition, at Nos. 17-19 Maiden Lane, the firm of Hartley & Graham succeeding to the business of Schuyler, Hartley & Graham. About ten years ago this firm moved from Maiden Lane to Nos. 313-315 Broadway, where they have since been located. Mr. Graham who has been identified with the financial part of the office business, gave little if any attention to the details connected with manufacturing or marketing the goods for which the firm are agents. He was secretary of the Union Metallic Cartridge Co., Bridgeport, and vice-president of the Remington Arms Co., Ilion, N. Y., which, with the Bridgeport Gun Implement Co., are what are known as Hartley & Graham properties.

He was an honored member of the Metropolitan, Century, Manhattan, Riding, Union League, Calumet, Lawyers, New York Yacht and Seawanhaka-Corinthian Yacht Clubs. For many years Mr. Graham was an active member and elder of the Fifth Avenue Presbyterian Church, and was also a member of the Chamber of Commerce and the St. Andrew Society.

Early in life Mr. Graham married Miss Annie Douglass, daughter of George Douglass. She died in 1872, leaving four children, who still survive. The children are John Lorimer, Malcolm, Robert Dun and Mary Douglass Graham. In 1876 he married the widow of Benjamin M. Whitlock, who also survives him.

At a meeting of the members of the gun and sporting goods trade of this city, which was largely attended, held in the office of the Winchester Repeating Arms Co., the following resolutions were passed unanimously, and a committee appointed to transmit them to the family after properly preparing the same:

Forasmuch as it has pleased Almighty God to remove from us our esteemed associate, Malcolm Graham,

Therefore, we desire to bear testimony to his worth and to give expression to our high estimation of his character, as indicated in all the relations of business life.

His connection with the firm of which he died a member antedates the memory of nearly all his present business associates. We have looked up to him with respect and regard as a man of spotless integrity and honor. We have ever found him kind and considerate, and desire to unite in this expression of regard and sympathy.

The late Robert Bonner was a famous compositor. One day, for a wager, he set and corrected 25,500 ems of solid minion in twenty hours and twenty-eight minutes. The greatest record which he ever made was setting and correcting 33,000 ems in twenty-four hours, an average of about 1376 ems per hour.

Aeronauts cannot rise much above five miles of vertical height on account of the increasing rarity of the air, but double that height has been attained by self-registering balloons, which tell us that some ninety degrees of frost prevail up there.

NEW ENGLAND HARDWARE DEALERS' ASSN.

The Seventh Anniversary of Ladies Night of the New England Hardware Dealers' Association, as well as the regular monthly meeting and dinner was held on Wednesday evening, December 13th. It is doubtful if the association have ever had a more enjoyable gathering than that held at the United States Hotel in Boston on that evening. Certainly the ladies, with their bright faces and the color of their dresses, added greatly to the pleasure of the evening. After the extremely enjoyable reception, which lasted from 4.00 to 5.30, the party adjourned to the large private banquet hall; about 200 were present, which included upwards of fifty ladies.

The guests and speakers of the evening were Mrs. Julia Ward Howe and Hon. W. R. Walkley of New York.

It was 7.20 when President William D. Parlin rapped for order and called for a vote on the annual amount due the State Board of Trade. This assessment being voted paid, the Westminster Trio, who had been refreshing the diners with music during the feast rendered their first selection, after which President Parlin made his address of welcome.

In substance he said: "We meet here to night to carry out one of the features of our association. We best get business ideas and business methods by meeting often. Acquaintance softens business relations. We are to forget to-night these business relations and enjoy ourselves in a social time, welcoming the chance to show our wives and lady friends where we meet, how we meet, and whom we meet. We can show them a fine body of men, one in which they need not fear to trust us in the future. I welcome you to our last meeting of the year, but in the welcome let us be thankful for the year, for what it has brought us in social and business ways.

Samuel H. Thompson next responded to the toast, "Our Lady Guests" by telling one or two bright little stories, thereby putting everyone at ease.

Mr. Thompson, as toastmaster, said in introducing the speaker of the evening: "In 1861 a lady accompanied by her husband and friends had been looking at a review of troops just out of Washington. On the way home the party sang those old songs, dear to the hearts of all, among them 'John Brown.' Later, one of the party asked this lady if she couldn't write some better words to that tune. The lady thought the subject over and the next day the hymn, two verses of which are on this menu, was written by our honored guest, Mrs. Julia Ward Howe. In welcoming her I suggest we all rise and sing these two verses." And it was done with a vim known only to the Hardware trade.

Mrs. Howe thanked the Association for their cordial welcome. She said: "I always enjoyed these 'ladies nights.' Men all alone in their evening dress looked like a lot of storks. It takes the beauty and color of the ladies and their gowns to make you look happy." (applause.)

In her bright, interesting manner she recalled Florence Nightingale, saying she would take us back only to 1844, when your president was five years old, as I have learned by a bit of private inquiry, playing at tin soldier perhaps, but getting ready for the real soldier later on. Thus starting with Miss Nightingale's life at twenty, Mrs. Howe told of the girl's elegant home, the intellectual father and mother, of wealth and social position; still the child seemed to long for something different. Finally going to Dr. Howe she asked him what he thought of her educating herself as a nurse. Florence Nightingale would not be called pretty, at this time, still there was that about her that impressed

one. Dr. Howe thought it a good idea, but we can little realize to-day how formidable it was fifty-six years ago for a girl to enter a life of this sort. The pictures Charles Dickens has drawn for us show how poorly educated and careless the nurses of those days were. Surely it was a grand undertaking. About this time our second child, a daughter, was born, and we named her Florence Nightingale.

From time to time we had letters from Florence. Then she went to Germany and we heard no more till the Crimean War.

Dr. Howe on reading the paper one day said: "Here comes Florence to the front as I always said she would." Someone asked who this Florence Nightingale was. Up spoke the "Little Daughter" saying "she is my god-mother." This was the time when she had ordered the boxes of blankets to be opened in spite of red tape, the fall of man; and they had been opened for the sick soldiers.

Afterwards she contracted a terrible fever and I have never seen her since. Pleasant notes come from her often. But she sees no one but those connected with her hospital.

So Divine Providence unfolds its great aspirations. Think what great things have been unfolded to us! Life is full of tremendous measures to be faced and fought out; unfolded in beautiful order. * * * * * The new century brings new beauties, new glories for the happiness of the race.

All this was told in a pleasing, familiar way, deriving strength from personal contact.

Mr. Thompson before announcing the violin solo by Frank Kennedy, said: "I am sure we shall all look back as to a red letter day to this address of Mrs. Howe's. Of all the insignia we may wear, the greatest is having done something to better our fellow man."

Thereupon Mr. Kennedy rendered another selection with a wonderful deal of expression, sitting down amid hearty applause.

The next speaker on the programme, Rev. Sarah A. Dixon of Tyngsboro, Mass., intended delivering an address on "A Plea for Perspective," but owing to a sudden temporary illness she was unable to do so, although present during the early part of the evening.

But, said Mr. Toastmaster, we have with us, sent divinely, one who is never found wanting. He is known as the "Discount Man," Hon. W. R. Walkley, of New York City.
